

OFFICE OF EDUCATION ACCOUNTABILITY  
**1997 ANNUAL REPORT**

KENTUCKY GENERAL ASSEMBLY

# **OFFICE OF EDUCATION ACCOUNTABILITY**

## **ANNUAL REPORT**

### **DISCUSSION DRAFT**

**This is a draft report prepared by the Kentucky General Assembly, Office of Education Accountability, and is subject to further revisions before it is released in final form. This draft is provided to you, in your official capacity, and is solely for your review and comment on errors of fact. Recipients of this draft are not authorized to make any further distribution or release of this information.**

**December 1997**

## INTRODUCTION

This seventh edition of the Office of Education Accountability's Annual Report is the culmination of efforts of the combined staff of the agency. These dedicated, hard working individuals have exerted a great deal of energy in the development, compilation, and assimilation of the information contained herein. I would be remiss in my duties if I failed to express my gratitude to the entire staff of the OEA for their wonderful work on this document.

It has been the approach of this office to submit an Annual Report in interim years that does not contain recommendations, but rather contains areas for discussion/action. This year's report, due to the fact that it is being submitted just prior to the biennial session of the Kentucky General Assembly, offers recommendations to the Legislature. These are offered based on a complete and thorough analysis of the data collected both during this year and in the previous years.

Although the Office of Education Accountability is primarily charged with oversight responsibilities, it is also charged with developing information and recommendations for the Legislature under the auspices of KRS 7.410. We offer our recommendations in the document to follow without prejudice and with a spirit of cooperation in helping the General Assembly and appropriate agencies of state government develop legislation and policies to improve the educational program for all of Kentucky's school children. We do not, however, view our agency as policy makers, and we shall not delve into that realm. Policy making is the purview of other agencies of state government, and we shall continue to serve to facilitate the implementation of legislation and policy developed by the General Assembly and other agencies.

We take great pride in the document contained hereinunder. It is our sincere hope that the information is presented in such a way as to be informative and useful. And, as always, the OEA stands ready to serve.

Kenneth J. Henry, Ed.D.  
Deputy Director, Legislative Research Commission  
Director, Office of Education Accountability

## OEA STAFF OVERVIEW

**Kenneth J. Henry, Ed.D.**  
Director, Office of Education Accountability

**Phil Austin**  
Assistant Director  
Division of Investigations

**Rejena Briscoe**  
Administrative Secretary

**Dudley Cotton**  
Program Analyst

## EXECUTIVE SUMMARY

The executive summary to follow focuses on the major recommendations pertaining to each section of the Annual Report. The intent of this executive summary is to provide thumbnail sketches of the various findings and recommendations so that readers may then access areas of interest to them.

**Assessment.** The KIRIS assessment program continues to be one of the most visible and controversial components of the Kentucky Education Reform Act. Such will always be the case with any "high-stakes" assessment program.

Statewide, growth expectations on the accountability index have not been met for either cycle 1 or 2 of the assessment program. In cycle 2 the average index for all Kentucky schools was 44.4 compared to the KIRIS improvement goal of 45.1.

### *Specific Recommendations Pertaining to Assessment*

1. The Office of Education Accountability agrees with the recommendations forwarded by the Task Force on Assessment and Accountability and suggests the Legislature give serious consideration to modifying the SAI to be a fairer and more objective measure of school success. At the same time, the Legislature should consider "leveling the playing field" in at least a portion of the index to correct for factors beyond the control of the school through the development of a "school efficiency index."
2. The Kentucky Department of Education and the Kentucky Board of Education should consider subscaling the performance standards to give schools credit for moving students up the scale. The wide gap (60 points) between apprentice at .4 value and proficient at 1 value is unwieldy and unfair. Schools could conceivably move all students to .9 value on the scoring theta and only receive .4 value, or apprentice, when aggregated in the school accountability index.
3. The Office of Education Accountability recommends any redesign in the accountability index reflect Threshold Standards that recognize both high achievement and improvement, but with slightly different consequences. The following model suggests various consequences:

If a school's accountability index on a scale of 100 is:

- **less than 35**, there should be required assistance and state intervention, including review team visits and distinguished educator placements.
  - **36-45**, improvement plans should be developed (rewards in the form of competitive mini-grants for exceptional improvement).
  - **46-60**, maintenance provisions with no state intervention should be implemented (rewards for exceptional improvement in the form of competitive mini-grants for school improvement).
  - **61>**, rewards and commendations with continued improvement expectations over time should be provided.
4. The Office of Education Accountability also supports continuation of high stakes for schools, teachers, districts, and students as impetus for continuing classroom transformation. There appears to be growing evidence that rewards (as a teacher bonus) may be too divisive to be productive for schools. Recent surveys conclude teachers are more driven by the fear of sanctions than by the potential for cash rewards. As a result, the Office of Education Accountability suggests there must remain an incentive for improvement, but the rewards should be couched in the form of school improvement rather than the current "teacher bonus" model. This could be achieved through legislation that would set an appropriation for schools who exceed their goals to write proposals for school improvement which could be in the form of additional technology, instructional supplies, teacher aides, playground equipment, and professional development.

**Distinguished Educator Program.** The need for additional distinguished educators has reached the crisis state. It is unreasonable to hold schools in decline or in crisis on the KIRIS accountability index responsible for not improving if a sufficient number of distinguished educators are not available.

*Specific Recommendations Pertaining to the Distinguished Educator Program*

1. The minimum ratio of distinguished educators for schools in crisis should be 1:1.
2. The minimum ratio of distinguished educators for schools in decline should be 3:1.

**Education Professional Standards Board.** The Education Professional Standards Board continues its groundbreaking work to promote professionalism, competence, and quality among teachers, administrators, and teacher and administrator preparation programs in Kentucky. The Education Professional Standards Board has worked diligently on several fronts including minority educator recruitment and retention, academic enrichment and career awareness, teacher and administrator preparation, and licensure revocation or suspension.

*Specific Recommendations Pertaining to the Education Professional Standards Board*

1. The shortage in principal candidates at all levels continues. It is particularly acute at the secondary level. Several programs have been initiated to address the problem, most notably the University of Louisville/Jefferson County Schools project, the Kentucky Valley Educational Cooperative/Morehead State University/Eastern Kentucky University/University of Kentucky, and Central Kentucky Cooperative initiatives. The Education Professional Standards Board should provide the lead in all studies seeking solutions to this problem and should encourage the creation of other programs, as well as other solutions to the principal shortage. Additionally, there are two doctoral students at the University of Kentucky identifying this problem a part of their dissertations.
2. It would seem appropriate to review the material from the validation panels for the middle school academic area tests being developed by the Educational Testing Service for appropriate passing scores. It appears to be most inappropriate to allow any group to be certificated without achieving a defensible cutoff score.
3. As the Education Professional Standards Board reviews the revised program of studies, it would seem necessary for the Board to set appropriate parameters for certification for elective classes developed by local school districts.

**Exceptional Children.** The reauthorization of the Individuals with Disabilities Act in 1997 necessitated numerous regulatory changes in Kentucky and may, in some instances, alter the focus of some statewide initiatives in special education. Some of the mandated changes are already in place in Kentucky, and this should be noted as a plus for leaders in the exceptional children program.

*Specific Recommendations Pertaining to Exception Children*

Recommendations related to special education will be contained in the report provided to the Interim Joint Education Committee on January 1, 1998.

**Extended School Services.** Extended School Services continue to be effective in reaching a wide range of students at risk for school failure. Many schools have also utilized innovative approaches to serve their students. The data on these programs, however, do not provide a clear picture of how effective they have been in improving students' learning. More evaluative data pertaining to the effectiveness of innovative programs are needed.

*Specific Recommendations Pertaining to Extended School Services*

1. The Kentucky Board of Education and the Kentucky Department of Education should consider revising the formula for grant allocations to allow low performing districts vis-à-vis KIRIS, CTBS, and ACT to receive a greater share of the ESS appropriation. At the same time, the Kentucky Department of Education's regional service center ESS consultants should devote a larger share of their workload to these same districts and perform a quality review of the extended school services programming in those districts. Failure of the under-performing districts to transform as per extended school services consultants recommendations, should result in the district being reported to the Office of Education Accountability for investigation of nonfeasance.
2. The Kentucky Department of Education should revise the evaluation of the extended school services program to show a district-by-district profile of trends over a five-year period on KIRIS, CTBS, ACT and other available cognitive and noncognitive data to reflect potential impact of extended school services.
3. The Office of Education Accountability recommends full funding of extended school services as per the Kentucky Department of Education's appropriation request.

**Family Resource and Youth Services Centers.** Overall, family resource and youth service centers (FRYSC) are one of the more popular of the Kentucky Education Reform Act initiatives. There is, however, a temptation to use FRYSCs for implementation of new federal welfare reform initiatives. This temptation must be resisted on all fronts to keep this program functioning as it was intended at its inception.

*Specific Recommendations Pertaining to FRYSCs*

1. The Cabinet for Families and Children should continue to make coordinators aware that this is an **educational program**, and all activities by the center should be focused toward an outcome that will improve students' chances to be successful in school.

2. The Cabinet for Families and Children should be cautious in using center coordinators and regional liaisons to supplant the work of their staff in implementation of federal welfare reform initiative requirements.
3. The Cabinet for Families and Children should carefully review staffing patterns of centers to ensure an excessive portion of the grant is not utilized to pay excessive staffing costs that may not yield appropriate returns on investment.
4. The Office of Education Accountability recommends full funding of the family resource and youth services centers' program to cover all eligible schools as per the Kentucky Department of Education appropriation request for the 1999-2000 biennium.

**Multicultural Education.** The Kentucky Department of Education has provided technical assistance to schools and districts in the areas of multicultural education, equity, and diversity via the Multicultural Opportunities Branch of the Division of Professional Development. Over the past two years several preparatory tasks have been accomplished including: (1) a statewide conference of educators, students and community members; (2) the publication of a newsletter highlighting important information and resources; (3) development of two training modules to address professional development; and (4) establishment of 37 professional development and instructional models for multicultural education.

*Specific Recommendations Pertaining to Multicultural Education*

1. Since Kentucky has such a diverse population from east to west, it would seem appropriate to begin a faculty exchange program from district to district. This could be patterned after the Student Ambassadors Program referenced above. As mobility increases, with persons moving from location to location to secure employment, this would allow teachers to help students new to their area feel comfortable.

**Preschool Program.** Collaboration has continually increased among school districts, Head Start programs, and other public and private providers maximizing services to children and families. In a few areas of the state, private providers have complained the free public school programs have hurt their business. School districts express concern about the lack of accountability for quality and services from some private providers. The issues surrounding quality and accountability standards for preschools remain a statewide and nationwide problem, especially in light of mandated welfare reform programs. Parents, teachers, and other stakeholders continue to praise the KERA Preschool Program as an essential component of the reform movement. However,

short of increased funding to cover the full cost of the program, districts may be required to scale back some critical elements of the program.

#### *Specific Recommendations Pertaining to the Preschool Program*

The Office of Education Accountability, after careful consideration, recommends the preschool program be fully funded as per the Kentucky Department of Education budget request. Growth through increased enrollment each year has forced districts to absorb the extra costs of serving the children outside the categorical appropriation. Budget language adopted in House Bill 379 attempted to provide more funds through stipulation that 40 percent of surplus SEEK funds be awarded to districts providing these services on a prorata basis. However, as a result of SEEK funds being fully utilized in 1996-97, no surplus was available and districts were required to absorb the anticipated surplus with no remuneration.

**Primary School.** The majority of schools visited by the Office of Education Accountability during the 1996-97 and 1997-98 school years appeared to more clearly understand current requirements. The Office of Education Accountability staff, while attending several task force hearings throughout the state in the fall of 1996, noted that some resistance still exists, largely attributed to misinformation as to what regulations require. Much of the criticism noted in the hearings centered around parents and teachers in upper primary (P-3 and P-4) complaining that primary programs did not provide basic skills attainment and lack of clarity regarding statutory requirements of multi-age grouping.

#### *Specific Recommendations Pertaining to Primary School*

1. The Kentucky Department of Education and the Kentucky Board of Education should consider requiring the use of KELP for all primary schools to ensure uniformity and continuity of curriculum, outcome expectations, and exit criteria.
2. The Kentucky General Assembly should consider permanently enacting into statute the language used in House Bill 379 to offer primary schools more latitude in making decisions regarding the level of multi-age grouping on a student-by-student basis.
3. The Kentucky General Assembly should offer more incentives in funding full-day kindergarten. An attempt was made in the current biennium budget bill to apportion a percentage of excess SEEK funds to districts that offered full-day kindergarten; however, due to no surplus being available, districts absorbed the funds locally.

4. The Kentucky Department of Education regional service center primary staff should more diligently monitor implementation practices of primary schools to ensure districts are not ignoring statutory and regulatory requirements. Although it is generally accepted that KIRIS is the measuring stick for schools, it is apparent some schools are ignoring major portions of the critical attributes and yet remaining successful vis-à-vis KIRIS.

**Professional Development.** Professional development continues to be the key to education reform. Opportunities for relearning and acquiring new skills are critical to changing education in Kentucky. The 34,000 teaching professionals continue to seek professional activities that will keep them prepared for today's classrooms. In addition, approximately 3000 (10 percent of the teaching force) new teachers enter the workforce each year and must receive appropriate professional development. The 1996 Regular Session of the General Assembly continued the appropriation for professional development at \$23 per student in average daily attendance for each year of the biennium. However, there was no renewal of the five instructional days for professional development that had been granted in the preceding four years. KRS 158.070 was amended to allow school calendars to be revised, but they must contain the equivalent of 175 six-hour days (1050 hours). Districts may now reconfigure their allotment of the minimum 1050 instructional hours to meet their needs.

#### *Specific Recommendations Pertaining to Professional Development*

1. Districts should study the issue of alternative uses of allocated time (1050 minimum hours) to provide opportunities for professional development activities. If the school day, week, or year is reconfigured, teachers will have additional opportunities for professional development activities during the year which would not require the use of substitute teachers. School calendars must be responsive to the needs of the professional staff. However, in order to have this happen, a master list of activities from the Kentucky Department of Education must be available to local districts by April 1. Additionally, the recent Opinion of the Attorney General's Office (OAG 97-25) requiring all teacher calendars to be 185 days may provide additional time for professional development activities outside instructional time. Although adding additional days for professional development is certainly desirable, the cost for each of these days is such that less costly alternatives should be studied.
2. Schools should provide site-based council training for all staff and include all interested parents. If everyone has the same training, faculty and parent participation on committees, as well as the council, could be increased.

**Regional Service Centers.** Regional service centers (RSC) continue to serve as a link between local school districts and the Kentucky Department of Education (KDE). They provide technical assistance, information, and training for their districts for the implementation of reform.

Each RSC submits an annual action plan and a subsequent evaluation of such to KDE. A review of these plans and their evaluation demonstrates that the RSCs feel they are accomplishing their plans. A number of the recently submitted plans model consolidated planning and are in place for two years. As a result, many of these activities are ongoing and have not received a final evaluation.

#### *Specific Recommendations Pertaining to Regional Service Centers*

The Office of Education Accountability recommends that regional school-based decision making consultants be allowed to concentrate solely on providing technical assistance to school councils.

**School-Based Decision Making.** As intended by the Kentucky Education Reform Act of 1990, the plan to shift significant decision making to the school building level has fully evolved. Currently, there are 1184 schools participating in the school-based decision making process. Seven schools are exempt from this requirement due to being one-school districts. An additional 91 schools have requested and received an exemption due to exceeding performance thresholds on KIRIS. No other state in the nation has made such a comprehensive effort in decentralizing decision making.

Of the 1184 schools currently participating in the school-based decision making process, 60 are functioning with an alternative model. Thirty-five of the alternative models have someone other than the principal serving as chairperson of the council.

During the 1996 Regular Session of the General Assembly, KRS 160.345 was amended to require newly elected council members to receive six hours of school-based decision making training and experienced council members three hours of school-based decision making training. As a result, the Kentucky Department of Education has increased its efforts to expand the number of endorsed trainers in school-based decision making. There are currently 187 trainers statewide who are endorsed to provide the required training for council members.

*Specific Recommendations Pertaining to School-Based Decision Making (offered by the Governor's Task Force on Public Education)*

1. Amend KRS 160.345(2)(a) to increase the number of parents on school councils from two to three.
2. Amend KRS 160.345(2)(a) to allow a parent representative to serve on the council, unless the parent is an employee or a relative of an employee in a particular school, or an employee or a relative of an employee in the central office.
3. Create a new section of KRS Chapter 160 to require the public be fully informed regarding school-based council budget allocations, including the figures used to allocate the funds, the funds reserved by the school district, and the intended use of the district reserved funds.
4. Amend KRS 160.345(2)(h) to include a requirement for the council to develop procedures it will use for consultation in the selection of personnel.
5. Amend KRS 160.345(5) to require the district to report to the Kentucky Board of Education the parent and faculty vote when requesting an exemption of a school from having a council.
6. Amend KRS 160.345(9) to require the Office of Education Accountability to develop a uniform, confidential complaint process; to protect anyone bringing a complaint from punitive action or retribution; and requiring the Office of Education Accountability to resolve the complaint within six months or to forward the complaint to the Kentucky Board of Education.
7. Amend KRS 160.345(2)(b)1 to allow consecutive terms of school council members when the council adopts different terms of office.
8. Amend KRS 160.345(2)(b)1 to require the chair of the school council be elected by the council from its membership, rather than requiring the principal or head teacher serve as chair.
9. Amend KRS 156.101 to require the local district evaluation system include criteria relating to the evaluation of school principal's performance as a member of a school council and in implementation of the decisions of the council. Amend KRS 160.345 to require the local district establish procedures for gathering information from the council for consideration in the school principal's evaluation by the superintendent.

10. Request the Kentucky Department of Education and the appropriate subcommittee of the Interim Joint Committee on Education review the school council budget allocations and the process of professional development decision making within school districts.
11. Request the Task Force recommend to the Kentucky School Board Association that the school boards explore a more collaborative approach to the budget-making process that involves various community groups, teachers, parents, and school council representatives.
12. Amend KRS 160.345(2)(a) to remove the state residency requirement for teachers serving on school councils.

**Superintendent/Principal Training and Assessment.** The superintendent training program and assessment center process (KRS 156.111) requires superintendents to successfully complete core programs in management, school-based decision making, school law, finance, curriculum, and assessment. After training, examinations must be successfully completed in each content area. All but three current superintendents completed this process as of July 1, 1997. These three were granted extensions for circumstances beyond their control. In addition, the statute requires anyone employed after July 1, 1994, as a first-time Kentucky superintendent, shall complete the assessment center process within the first year of employment. The Kentucky Board of Education is required to establish a continuing professional development program for all superintendents effective July 1, 1994.

The superintendent training program and assessment center process were developed and piloted in the 1992-93 school year. Eighty percent was determined as the required score for each of the five training modules. During 1996-97, 18 persons completed the superintendent assessment center process. The superintendents interviewed by the Office of Education Accountability staff indicated the information received during the training was worthwhile. However, they expressed concern about being out of their district for 15 days (3 days each for 5 components) during their first year.

*Specific Recommendations Pertaining to Superintendent/Principal Training and Assessment*

1. The Kentucky Department of Education needs to address the issue of those superintendents who do not complete the training/assessment within the specified time frame and determine how many times a candidate can take the test for each of the five modules.

2. Principal preparation programs need to include an assessment center process. This will allow identification of strengths and weaknesses for the candidates. This could serve as preparation for the performance assessments for principals being developed by the Educational Testing Service for the Interstate School Leaders Licensure Consortium, of which Kentucky is a member.
3. If the content and materials used in the superintendent training program were incorporated into the superintendent preparation, the assessments would be the only financial obligation of the Kentucky Department of Education. This would allow for assessment on demand and eliminate the need for a first-year superintendent to set aside 15 days (3 days for 5 training/assessment modules) out of his/her district.

**Superintendent Screening Committees.** KRS 160.352 calls for a specific procedure in the selection of a new superintendent and has as an integral part in the use of a screening committee. This committee is composed of two teachers elected by the teachers in the district; one board of education member appointed by the chairperson of the board; one principal elected by the district's principals; and one parent elected by the PTOs of the district. Additional provisions are made for minority representation in all districts having 8 percent or more minority enrollment. The board of education must consider the recommendations of the committee, but is not bound by its recommendations.

KRS 160.352(2) sets timelines for the establishment of a screening committee. These timelines allow 30 days to convene a committee after it is determined a vacancy has or will occur unless that vacancy will not occur within six months. In that case, it is not necessary to establish the screening committee until 90 days prior to the actual occurrence of the vacancy. There is no statutory set minimum or maximum time for the screening committee to complete its work, but it could be assumed by the 90-day wording in KRS 160.352(2) that the Legislature's intent, when there was ample notice of the vacancy and time constrictions were not an issue, 90 days would be sufficient for the screening committee to achieve its purpose. In reality other considerations come into play including short notice of vacancies, the necessity of hiring prior to the start of summer preparations for school openings, the size of the district, number of applications, the scope of the search, etc.

In the 33 districts responding to OEA's survey in the current year, there were a total of 865 applicants responding to the posting and advertising of these superintendent positions. The fewest number applicants per district were eight and this occurred three times. The largest

number of applicants for a single district was 64 and that occurred only once. The average number of applicants for all the districts was about 26.

- Five districts reported 10 or less applicants
- Eight districts reported 11-20 applicants
- Nine districts reported 21-30 applicants
- Six districts reported 31-40 applicants
- Three districts reported 41-50 applicants
- One district reported 51-60 applicants
- One district reported more than 61 applicants

*Specific Recommendations Pertaining to Superintendent Screening Committees*

1. In our previous report we encouraged school districts to seek assistance from consultants during their selection process. Since this selection and screening process is important and requires a significant investment in time and effort, we will again encourage districts to provide screening committees and boards of education ample time to complete their work and sufficient assets to engage those with the expertise and experience necessary to enhance their screening and selection process.
2. When a vacancy in the superintendent's office occurs, KRS 160.350 and OAG 97-35 be carefully reviewed prior to the appointment of an interim superintendent and the beginning of the screening process in KRS 160.352.

**Investigative Division.** In previous reports, it has been noted that the great majority of the work of the Investigative Division in resolving allegations of wrongdoing, etc., requires only minimum inquiry and some limited correspondence with the district involved. Some issues and allegations that are somewhat more complex may require one or two on-site reviews in the district. Most of these matters are also resolved at the district level by corrective action taken by the district after recommendations or suggestions by the Office of Education Accountability. In only 14 of the over 550 matters opened for review has it been necessary to refer our findings to the Chief State School Officer for consideration of charges to be adjudicated before the Kentucky Board of Education. It is noteworthy that in all of these 14 matters referred to the Kentucky Department of Education, the Commissioner and his staff agreed with the Office of Education Accountability's position and filed charges. This has occurred in considerably less than 5 percent of our investigative reviews and only where the evidence of waste, mismanagement, wrongdoing,

incompetence, etc., is so compelling that it is obvious and clear that no resolution can be achieved at the district level.

The determination of whether an allegation is worthy of inquiry or investigation is made only after a review and consideration of several factors. The factors considered are as follows: the quality of the information, the seriousness of the allegation, the specificity of the information, whether the complainant has firsthand knowledge or is simply repeating rumor and hearsay, whether there are other complainants or similar complaints regarding the same issues in the same district, the potential for damage to the district if true, and the provability of the allegations.

The sources of the allegations that lead to inquiries or investigations are numerous. They include, but are not limited to, the following: hotline telephone calls; correspondence; personal visits; newspaper reviews; requests and referrals from other agencies; requests from school boards, superintendents and other school district employees. In many instances sources of allegations are fully identified. Some sources have requested confidentiality and others are simply anonymous.

It has been and will remain the policy of this office to accept, assess, and if necessary take action based upon anonymous information if it meets the previously discussed criteria for specificity, seriousness, provability, etc. While it would be preferable to have the sources of all information fully identified, the nature of the Investigative Division's work and the mind-set of some of those providing information compels this division to do otherwise. In the past this office has received follow-up letters or hotline calls from sources who have previously provided anonymous information complaining that nothing has been done in response to their concerns. Of course, there was no way to communicate to these complainants what action was or was not taken in response to their information and the rationale for the decision made by staff. In some cases contact has been made with the district and appropriate action was taken to resolve the issue, but the complainant is not aware of the charge. In other cases the information was found to be erroneous or the applicable law was misunderstood by the complainant. While this inability to communicate with an anonymous complainant is an inconvenience and at times a liability, it is still the belief of this office that the acceptance and assessment of anonymous information provides sufficient positive results to outweigh the negative factors. To refuse to consider anonymous information or fail to promise confidentiality would be unfair to those who have significant information to provide, but are truly afraid of being identified as the source of such information.

Since its inception, the Investigative Division has recognized the importance of maintaining a close relationship with other agencies of state government which are involved in endeavors that

are similar to the Office of Education Accountability's. The maintenance of these relationships facilitates the free flow of information between agencies and encourages referrals of complaints to and from these agencies so that the agency having the primary interest and jurisdiction will conduct whatever inquiry is appropriate. This exchange of information also reduces the possibility of duplication of efforts in those situations where complainants have sent similar complaints to several agencies, thus preventing the wasteful use of limited resources of the agencies involved. Periodic contact is maintained with several divisions of the Attorney General's Office, the Auditor of Public Accounts, and the Kentucky State Police Special Investigations Unit. The Investigative Division also maintains close contact with the Kentucky Department of Education's Legal Services Office, Division of District Finance, Division of Management Assistance Program, and the Education Professional Standards Board.

It will remain the policy of the Office of Education Accountability and its Investigative Division to aggressively and fairly respond to allegations of waste and mismanagement, political influence, improper nepotism, favoritism, misallocation of school monies, and such other matters that are deemed within our mandate. This, of course, will be undertaken only after careful review and analysis of the allegations presented and a recognition that honest mistakes are made and must be treated as such where the facts and circumstances indicate such a course of action. To operate under any other policy would be an affront to the Supreme Court of Kentucky and the Kentucky General Assembly and a disservice to the children and taxpayers of the Commonwealth.

**Finance.** The Kentucky Education Reform Act (KERA) of 1990 completely overhauled Kentucky's system of education the primary element of which was a new funding formula. The new formula, called the Support Education Excellence in Kentucky (SEEK) program, provides for a minimum local tax effort, increases support to local schools, and alters the distribution of state educational dollars.

In addition, the Facilities Support Program in Kentucky (FSPK) provides equalized funding for capital construction. Other state funding in the form of categorical grants include extended school services, preschool education, professional development, technology, school rewards, and family resource and youth services centers for students and their families.

#### *Specific Recommendations Pertaining to Finance*

As of this writing, recommendations for dealing with many of these issues are being finalized by the Finance and Management Issues group for presentation to the full task force in

December 1997. It should be noted the four most prominently debated issues were addressed by the OEA in its previous three annual reports:

- Including KERA strands such as professional development, extended school services and preschool in the SEEK formula.
- Development of a Professional Compensation plan per KRS 157.390(7).
- Amend KRS 160.470 to permit school districts to levy a tax rate on real and personal property that will generate a 4 percent increase in local revenue.
- Use prior year assessment rather than current year in the calculation of the SEEK formula.

**Technology.** Kentucky generally gets high marks in most national studies for its commitment of resources to educational technology. "Computers and Classrooms" rank Kentucky a little above the national average at 9.6 students per computer and slightly below the national average in students per multimedia computers. We also fall below the national average when it comes to the percentage of schools (50 percent) with internet access. Kentucky fairs better than the national average in percentage of schools (48 percent) with Local Area Networks, satellite technology (49 percent), and training (28 percent) for its teachers (at least 9 hours).

These are certainly impressive numbers as Kentucky gears up for the challenges of the 21st century. On the other hand, there is much yet to be done if we are to accomplish our goal of one computer for every six students in attendance.

#### *Specific Recommendations Pertaining to Technology*

1. Provide more funding for routine maintenance and trouble-shooting or at least reserve a portion of Kentucky Educational Technology System funds for that purpose. (Not permitted under current regulation.)
2. Increase school districts' share of the state appropriation for KETS. (Of the \$20,000,000 appropriate for FY 1998 school districts are scheduled to receive only 70 percent or \$14,000,000.)
3. Improve effectiveness of the regional service centers by allocating more technical staff to technology. (Apparently some regional service centers staff are being redirected into the Distinguished Educator program which greatly reduces technical assistance to school districts.)

4. Reduce redtape associated with purchasing off state price contract. (District Technology Coordinators say it sometimes takes weeks to receive an order; also, they could save a lot of time if purchase requests could be handled directly with Frankfort instead of going through the regional service centers.

## ASSESSMENT

**Overview.** The Kentucky General Assembly, with the passage of House Bill 940 in 1990, envisioned an assessment program that would eventually change the way classroom instruction was delivered. The goal was a performance-based curriculum that would require students to think critically, solve problems, communicate, integrate, and apply knowledge as well as produce responsible and self-reliant individuals.

KRS 158.6453-55 mandated the Kentucky Board of Education (KBE) develop an interim assessment program that would move all public schools toward a primarily performance-based assessment program by July 1, 1996. The Kentucky Department of Education (KDE), in conjunction with a team of national experts, was required to develop a Request for Proposals (RFP) that would be issued to potential contractors; then review the proposals and recommend one to KBE for implementing the five-year interim assessment program. The enabling statute called for the assessment to measure school accountability, be "NAEP-like," and measure reading, writing, mathematics and social studies in Grades 4, 8, and 12 so that there could be national comparisons.

Advanced Systems in Measurement and Evaluation (ASME) of Dover, New Hampshire, was awarded the \$29.5 million contract to develop, administer, score, and report assessment results for the five-year period. KDE and ASME jointly developed the Kentucky Instructional Results Information System (KIRIS) in the fall of 1991. The first assessments, administered in the 1991-92 school year, consisted of writing portfolios, performance events, open-response, and multiple choice items.

KRS 158.6455 and 704 KAR 4:010, the subsequent regulation promulgated by KBE, called for this data to be aggregated into a single-school score that would provide a baseline for schools to be measured against over two years. Schools would be rewarded or sanctioned based on an expected growth of 10 percent of the distance between the baseline score and 100. The regulation also defined four performance standards and their value: Novice (Value 0), Apprentice (Value .40), Proficient (Value 1.00), and Distinguished (Value 1.40). Individual student scores derived from the content areas of reading, mathematics, science, social studies, and writing were multiplied by one of these values to comprise five-sixth's of the school score. The remaining one-sixth was a compilation of various non-cognitive indicators that included school attendance, drop-out rate, retention, and transition to adult life for all high school graduates.

The 1991-92 assessment data for the baseline year indicated about 90 percent of the state's students scored either at the novice or apprentice levels. In 1992-93, KIRIS assessment data revealed scores had declined at Grade 12 with only 20 of 256 high schools making progress. Grade 8 scores showed slight progress, and Grade 4 scores indicated excellent progress. KDE attributed the low Grade 12 scores to schools not taking the test seriously ("senioritis" or low motivation). At this point, it became clear that testing students with no consequences attached was not a good indicator of a school's efforts.

In January 1994, then Commissioner of Education, Dr. Thomas Boysen, requested the Legislature delay until 1996 the "schools-in-crisis" sanctions. Additionally, he requested Grade 12 tests (after the 1993-94 school year) be moved to Grade 11.

Also, as part of these "mid-course corrections," Commissioner Boysen requested goals three and four ("self-sufficiency" and "responsible group membership") be removed from the assessment. Subsequently, KBE promulgated a regulation reducing the number of outcomes from 75 to 57 and changing the label to "Academic Expectations." All these requests were granted by the Kentucky General Assembly.

Results from the 1993-94 assessments indicated 95 percent of the state's schools made improvement, while less than 5 percent were in decline after year two of the biennium. Four hundred-eighty schools (38 percent) were eligible for rewards, while an additional 100 schools (8 percent) met threshold and were deemed successful. In year two of the biennium, 269 schools (22 percent) were categorized as "successful in year two" which exempted them from sanctions. An additional 349 schools, (28 percent) had an accountability index that fell somewhere between baseline and threshold and were classified as "improving." Fifty-three schools (4 percent) were classified "in-decline" and received assistance by a distinguished educator, since they fell below their baseline by virtue of KIRIS performance.

Twenty-six million dollars (\$26,000,000) was distributed to schools as rewards for certified staff to determine how the money was to be used. Of the \$26 million reward, initially \$25,531,395 was distributed to 480 schools and 42 districts. Staff bonuses consumed 96 percent of the rewards.

KBE changes to 703 KAR 4:010 for Cycle 2 included the addition of arts/humanities and practical living/vocational studies for an additional one-seventh count. Math portfolios were

added to the school accountability index for Cycle 2, and performance events were deleted retroactively when they were deemed unreliable and therefore unusable.

KIRIS results from Cycle 2 released on October 23, 1996, indicated all schools, when averaged together, had achieved 88 percent of the goal for the biennium. Grade 4 produced 132 percent of the goal; Grade 8 produced 53 percent of the goal; and Grade 11/12 produced 82 percent of the goal. These results are similar to Cycle 1 when 88 percent of the goal was achieved. It is interesting to note if accountability by virtue of this index "flowed-up" to KDE and KBE, they would be deemed "in decline," since the state as a whole has not met its growth expectation for either Cycle 1 or 2.

The average index achieved by all schools at the end of Cycle 2 was 44.4 toward the KIRIS improvement goal of 45.1 for that cycle. The long-term goal is all schools will reach 100 (or proficiency) by the year 2012.

Table 1, provided by KDE, shows the number and percent of schools in each accountability category by grade at the end of Cycle 2.

As shown in Table 1, 695 schools (56.19 percent) were successful or in rewards while 365 (29.51 percent) were improving (between baseline and goal). Eighty-seven schools (7.03 percent) were categorized as Improving Category 2 (not having met original threshold across two biennium's). These 87 schools would have been labeled "in decline" had KBE not promulgated 703 KAR 3:060, deferring decline status. Another 81 schools are truly "in decline" based on Cycle 2 data (defined as falling less than five points below baseline). Nine schools (.73 percent) face the most severe consequences outlined in KRS 158.645 Subsection 5, "in crisis."

### **Current Status**

Several changes enacted for the 1996-97 school year that would improve KIRIS as a measure of schools were the inclusion of multiple choice items, reduced testing time from 14 hours to about 7 hours with more grades involved, and the addition of a norm-referenced test at Grades 3, 6, and 9. The removal of performance events was viewed by many as a retreat from the goal of

\*Includes Successful Year 2 schools which reached or surpassed their improvement goal the last year of the accountability cycle, although their average growth index did not meet their improvement goal.

becoming a primarily performance-based assessment program as required by statute by many teachers. However, the majority felt deleting math portfolios would allow more time for teachers to spend on skills development. Many were disappointed that multiple-choice items carried no weight in the index for the next two years except for building the baseline for future bienniums. It was also troubling to many that the data from the CTBS/5 reading and math tests would not be factored into the schools' index.

Year 1 of Cycle 3 (1996-97), could be described as a year of "tide-turning" with many important events occurring:

- In the 1996 Regular Session of the Kentucky General Assembly, SCR 94 was passed which called for the creation of a Task Force to review the implementation of the Kentucky Education Reform Act (KERA). During the fall of 1996, several hearings were

held around the state to allow public input regarding the implementation of the reform movement. The resounding message heard at the hearings was to modify KIRIS and make it a fairer and more accurate measure of school success.

- At the February 1997 Interim Joint Education Committee meeting, three task force subcommittees were created and members appointed which included legislators, governor appointees, and citizens to review: assessment and accountability, teaching and learning, and finance issues. These subcommittees would then make recommendations to the full Task Force which would then make recommendations to the Governor and the General Assembly for possible action by the 1998 Regular Session of the Kentucky General Assembly.
- In July 1996, KDE renewed its contract with ASME which included a four-year, \$38-million-dollar commitment to administer the assessment program through year 2000, although the contract is renewable on an annual basis.
- In August 1996, KBE amended 703 KAR 4:010, through emergency provisions, to remove performance events retroactively from the Cycle 2 results. This action prompted an extended debate, whereby at least 100 schools were adversely impacted. Fourteen of those schools appealed their Cycle 2 KIRIS results claiming a violation of the due process "adequate notice" procedural requirement. KBE denied granting appeals on any of the performance events cases; however, the Attorney General's hearing officer granted all those schools' appeals based upon three of the four criteria established in KRS 158.6455 (8). These being that the decision was:
  - arbitrary.
  - lacking any reasonable basis.
  - highly unusual circumstances beyond the control of the school.

Other actions at the August meeting included the passage of a regulation to enact a code of ethical testing practices and to give legitimate status to "Improving Category 2" schools. These schools are subject to the consequences of "decline" since after two successive bienniums, they had not met the original threshold.

- A writing portfolio scoring audit of the 1995-96 portfolios showed improvement from the previous audit done in 1993; however, critics argued since scores had to be lowered in

four of five schools, this was not credible for high-stakes decisions. This audit did not evaluate "authenticity" (whose work it is), but only corrected for scoring discrepancies.

Writing portfolio audit results released in September 1997 for the 1996-97 school year indicate scoring accuracy has improved slightly since the 1996 audit. From the total of 100 schools audited, 73 had scores lowered, 7 scores were unchanged, and 20 had scores adjusted upward.

- ACT statewide scores were released indicating Kentucky maintained a 20.1 average which had been consistent for five years. This is .9 below the national average of 21.
- National Assessment of Educational Progress (NAEP) scores, (sometimes referred to as the Nation's Report Card), were released indicating that Kentucky had made slight gains in fourth grade reading and eighth grade mathematics. Eighth grade NAEP scores were released in the fall of 1997 for science performance in Kentucky schools (first administered in 1996) which revealed Kentucky's performance was at the national average.
- CTBS/5 statewide scores were released at the August 1997 meeting of KBE. These appear to indicate Kentucky students in Grades 3, 6, and 9 were performing at about the national average in the survey version of this test in the areas of reading, language arts, and mathematics.
- As a result of continued concern regarding the removal of performance events from the accountability index in the fall of 1996, the Office of Education Accountability (OEA) was asked to investigate events surrounding this removal and report back to the Interim Joint Education Committee early in 1997. The report issued by OEA at the March 1997 committee meeting sparked further interest by reporting the state should be due at least a \$1 million refund based upon the expenditure of over \$3 million during the last biennium, when they were deemed "unusable."
- The Interim Joint Education Committee at its March meeting requested OEA, along with the Finance and Administration Cabinet and KDE, conduct a fiscal and management audit to review the entire assessment program from the beginning to determine whether the state was due remuneration from the contractor, and whether KDE's actions had been prudent and within model procurement guidelines in the administration of the contract.

- The Interim Joint Education Committee at its July 1997 meeting reaffirmed the intent of the audit through the passage of a resolution and charged LRC/OEA with the administration thereof. Coopers and Lybrand L.L.P. was chosen through an RFP process to conduct the management and fiscal audit. This firm subcontracted with Professor James Catterall and Associates (JSC&A) from UCLA to conduct the "test quality" review and determine whether the recommendations by Hambleton et al, in the June 1995 OEA Technical Quality Report had been implemented. Dr. Catterall is also required to write recommendations for improvement as part of his charge. Both parties began their work in late September 1997, and reports are due to LRC by December 31, 1997, in time for the Kentucky General Assembly to deliberate during the 1998 legislative session.
- Violations of KIRIS code of ethics were exposed in at least one school whereby scores were virtually zeroed as a result of inappropriate testing practices. This resulted in substantial media attention and prompted KDE to revise the system for dealing with testing irregularities. On August 4, 1997, Dr. Wilmer Cody, Commissioner of Education, implemented new and more rigorous procedures in investigating KIRIS allegations of inappropriate test practices. Late in October when newly appointed OEA director, Dr. Kenneth Henry, began his tenure, discussions about protocol of who should investigate these allegations began. It was concluded OEA should take a stronger role in these investigations. Discussions are continuing, as the code of ethics for appropriate testing practices is being revised through the regulation process to reflect the more rigorous protocol by KBE.
- At a special called KBE meeting on August 14, 1997, to approve subcontractors' continuation of work through the 1997-98 school year, Dr. Ed Reidy, Deputy Commissioner for Learning Results Services, announced his resignation. Dr. Reidy also announced school reports would be late as a result of errors committed by ASME in the calculation of elementary and middle school scores. In mid-October it was announced that November 19 was the projected date for school scores to be released, with student level scores coming sometime in December.
- Scoring errors by ASME were discovered by KDE officials in June 1997, affecting approximately one-third of the elementary and middle school arts/humanities and vocational studies/practical living scores. This revelation prompted the Commissioner of Education to cancel the contract effective August 30, 1997. This scoring error will cost the state an additional \$1.5 million to pay additional rewards to deserving schools.

- Corrected scores also were released in September for schools who were affected by the error found in June 1997. As a result of the changes, 56 percent of Kentucky's schools met or exceeded their improvement goal for the two-year period.

Other effects of the changes include:

- 31 schools and 8 districts moved from "improving" to "successful."
- 7 schools moved from "decline" to "improving" or "improving category 2."
- 1 school moved from "improving category 2" to "improving."
- 373 schools will be eligible to receive additional rewards money.

OEA Research. KRS 7.410(5) requires OEA to, "Conduct studies and analyze available data on the efficiency of the system of schools and whether progress is being made toward attaining the goal of providing students with the seven (7) capacities as required by KRS 158.645." To comply with this requirement in the statute, OEA has established a Division of Program Oversight to monitor and review the intent and efficacy of the 15 program initiatives instituted by KERA.

In previous years, OEA has conducted 25 to 35 monitoring visits each year to a sampling of districts, collecting data for the purpose of reporting to the Legislature and Governor, primarily through the OEA annual report submitted each December. In the 1996-97 school year, OEA decided to embark upon a slightly different approach in an attempt to collect more refined data for possible analysis in making determinations about how efficient schools were in providing students with the seven capacities as mentioned in statute. In 1996-97, OEA endeavored to study fewer districts, but to conduct a more intensive review.

Seventeen districts were chosen, none of which had been previously visited by OEA, and were representative of the state in size, wealth, geography, urban/rural, county/independent, and KIRIS success. Each district was notified at least seven days prior to the visit. At the same time, an outline of the scope of the review and a detailed data request were faxed to the district, allowing adequate time for document preparation before the review team's arrival. Two to three days were spent in most districts collecting detailed data on each of the program initiatives coupled with several classroom observations. Entry and exit briefings were held by OEA on each visit, and careful consideration was given so as to be as unobtrusive as possible. OEA would like to commend all participating districts for extraordinary cooperation in this effort.

Several assumptions and limitations need to be stated:

1. The seven capacities are reflected vis-à-vis the six learning goals and fifty-seven academic expectations mentioned in regulation.
2. KIRIS does a sufficient job measuring the goals and expectations.
3. The School Accountability Index (SAI) is a fair representation of KIRIS success with its 10 percent biennial growth expectation.
4. A total of 130 classroom observations lasting 30 to 40 minutes were conducted in the 17 districts using a 20-item checklist developed by OEA (Appendix A). In districts where there were more than six schools, a sampling methodology was used.
5. Data used in this analysis were extracted from school districts' 1995-96 annual financial reports to OEA and KDE's 1996-97 SEEK calculations.
6. Some observations may have been conducted in classrooms where the principal felt the best quality of instruction was occurring, which would not indicate a representative sample.

In the summer of 1996, after careful study of the intention in KRS 7.410 in the area of efficiency of schools' students attaining "...at least the seven (7) capacities...", Doug Terry, legislative analyst in the Division of Program Oversight, and Dr. Robert Wagoner, former assistant director in the Division of Finance, contacted Dr. Stephan Goetz, University of Kentucky, Department of Economics, to further investigate the feasibility of creating an "efficiency index." Dr. Goetz had done extensive research using the "production-function" model of statistical analysis, primarily as it applies to business and economics. He had also become interested in KERA and KIRIS as they relate to these models of "inputs-outputs" statistical analyses. The two parties met and decided to pursue the idea of developing an index that would correct for disparity among school districts when making judgments about classifications.

Although the SEEK provisions of KERA provide school districts 15 percent additional money for free-lunch students (15 percent of SEEK base, \$2673, in 1996-97=\$400.95), this money does not (except in rare instances) follow the child, but is rather spread out across the district with no requirement existing in the law that it follow free-lunch participants. The disparity in Kentucky

among percentage of free-lunch participation in districts ranges between 2 percent and 90 percent; so the question becomes, should the expectations be the same for all?

In the fall of 1996, OEA supplied Dr. Goetz with extensive data files, including both fiscal and program information. By February, Dr. Goetz had produced a report that provided rankings of school districts showing differences in actual versus predicted rankings and SAI scores using regression analysis. During the same period, OEA staff was visiting in selected districts collecting data and conducting classroom observations to provide a qualitative overview of the efficiency scores generated by the statistical analysis.

Educational research has a long history of repeated findings that per capita wealth is strongly associated with academic achievement. In the quest for all students to become proficient by the year 2012, the question becomes: *Is it possible for poverty-stricken schools who are currently performing in the 30s to move all students toward proficiency by year 2012 given the additional challenge of possibly a 90 percent economic deprivation rate among its students when wealthier districts may only have a 2 percent economic deprivation rate and are performing at higher levels on the school accountability index?*

This disparity is compounded further by an accountability index requiring schools to improve the performance of different cohorts of students as opposed to a longitudinal model which would evaluate the school on its performance with the same set of students over time.

This model does not lower expectations for poverty-stricken schools; it only corrects for the disparity through a regression analysis that "levels the playing field" by statistically controlling for pertinent factors affecting student performance on tests. This analysis would predict where the school should score on KIRIS, given local resources, then provide the actual score that would place their performance above or below the predicted score. In cases where school districts perform above the predicted score (positive #), they would be classified as an "overachiever" and below the predicted score (negative #) an "underachiever."

The term "efficiency" connotes how well a district is using available resources to produce better learners. The KIRIS accountability index is constructed to expect growth toward a goal of 100 for all schools by the year 2012. Every school is expected to make biennial growth to close the gap 10 percent from where it is currently toward 100. Any district which exceeds its goal by at least one point qualifies for rewards. One problem with the current system is rewards and

sanctions are determined without regard to factors outside the control of the school which also affect performance.

The methodology chosen to study "efficiency" was a regression analysis which was overlaid by a qualitative review of each district. The dependent variable (outputs) analyzed was the district KIRIS96 accountability index, with several spending-related independent variables factored in. This analysis provided a "predicted score" for each district based upon the relationship of one district's resources when compared to all other 175 districts. The independent variables (inputs) included were:

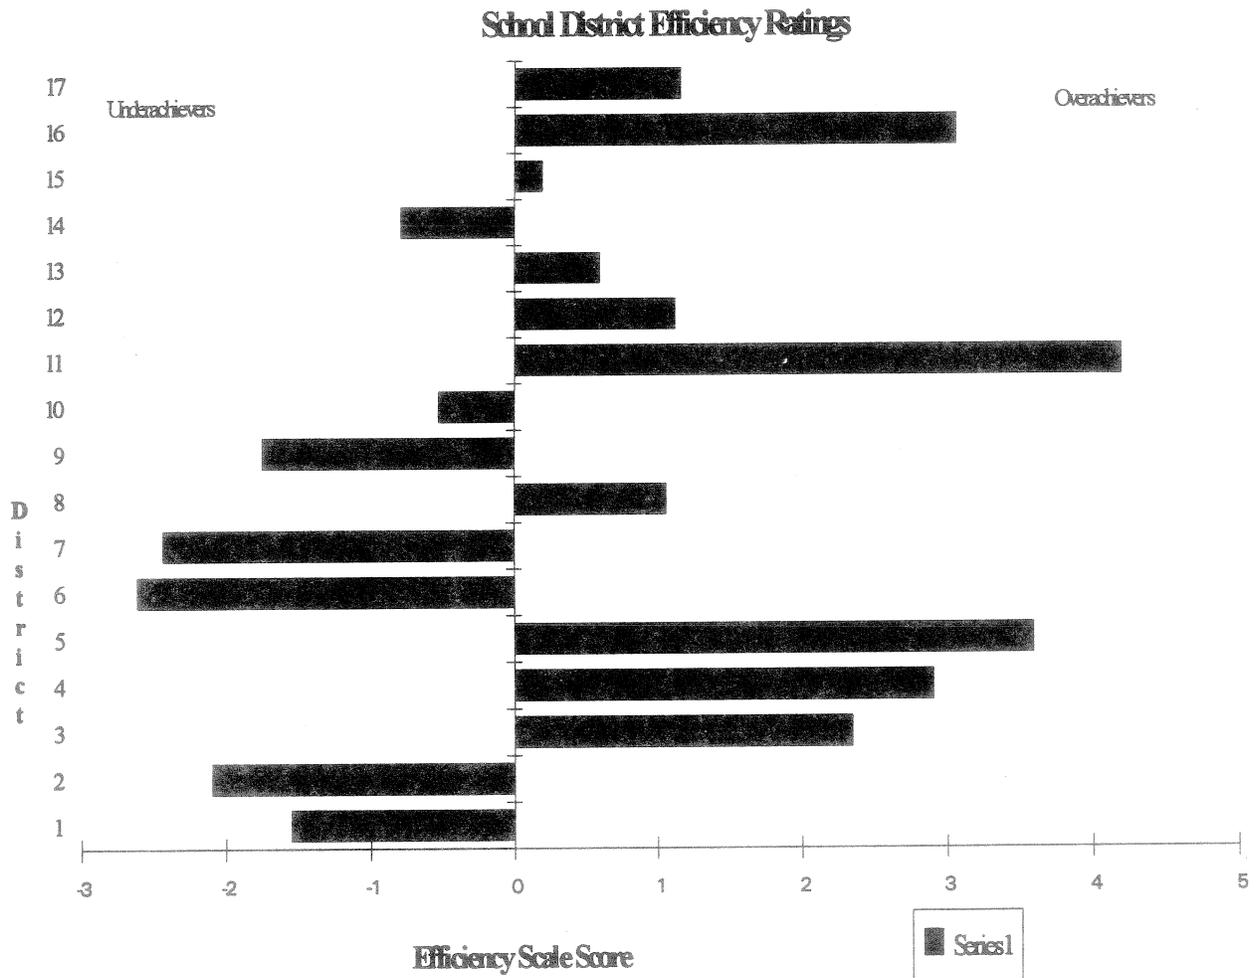

- baseline score
- administration spending per pupil
- class size
- ETR
- teacher salaries
- school size
- student poverty rates
- education of parents

In the fall of 1996, a "school efficiency index" was created using "linear regression analysis" which provided a predicted score for each district showing what its score should have been in 1995-96, based upon fiscal resources allocated by the district. The difference between actual KIRIS96 and KIRIS96 Predicted score creates the index rating as shown on Table 2. The dependent variable (output) was the KIRIS96 and the independent variables listed above were used to generate the predicted score.

**TABLE 2**

DISTRICT	KIRIS96	KIRIS96 PREDICTED ADJUSTED W/ REGRESSION	SCHOOL EFFICIENCY INDEX RATING
1	44.8	46.35	-1.55
2	44.7	46.8	-2.1
3	50.1	47.75	2.35
4	47.8	44.89	2.91
5	51.8	48.2	3.6
6	47.7	50.32	-2.62
7	45.4	47.84	-2.44
8	43.6	42.54	1.06
9	40.7	42.45	-1.75
10	41.6	42.13	-0.53
11	46.3	42.1	4.2
12	54.3	53.18	1.12
13	43.1	42.5	0.6
14	46.5	47.29	-0.79
15	44.4	44.2	-0.2
16	53.6	50.53	3.07
17	44.6	43.44	1.16

**FIGURE 1**

The attempt to validate a district's efficiency index rating was done through a district visit by the OEA monitoring team reviewing data and conducting classroom observations. For the purpose of keeping a district's identity anonymous, numbers have been assigned to each of the 17 districts. However, a district profile (Table 3) is offered for each numbered district involving limited information such as range of district size, per pupil expenditure amount, and economic deprivation rate using free lunch.

Overall correlation in the 17 districts between KIRIS96 district accountability index and school efficiency index is positive .52 ( $p=.034$ ). These data indicate districts who are using resources in a more efficient way are also performing better on the KIRIS SAI and are more successful in KIRIS classifications.

**TABLE 3**

**SCHOOL DISTRICT PROFILES**

District	ADA 1996-97	Free Lunch % of ADA	Pupil Teacher Ratio	1995-96 Per Pupil Spending	KIRIS96 Index	KIRIS96 Classification	School Efficiency Index Rating	Ranking Change KIRIS vs. Predicted
1.	2325.7	25	14.5	\$4821	44.8	improving	-1.55	137/125 +12
2.	4336.2	15	16.5	\$4994	44.7	improving	-2.1	120/148 -28
3.	1783.4	36	15.8	\$5118	50.1	reward	2.35	13/26 -13
4.	1437.0	30	14.5	\$5046	47.8	reward	2.91	24/16 +8
5.	9355.5	23	16.1	\$5354	51.8	reward	3.6	4/8 -4
6.	29,005.8	33	13.8	\$6172	47.7	improving	-2.62	91/157 -66
7.	1840.5	43	15.2	\$4977	45.4	improving	-2.44	158/152 +6
8.	1327.8	33	15.4	\$5306	43.6	successful	1.06	58/54 +4
9.	2559.8	57	15.1	\$5145	40.7	improving	-1.75	117/134 -17
10.	932.9	64	14.3	\$5390	41.6	improving	-0.53	98/100 -2
11.	2052.8	51	12.8	\$5707	46.3	reward	4.2	11/5 +6
12.	1245.5	27	15.4	\$6272	54.3	improving	1.12	97/53 +44
13.	793.4	41	15.7	\$5830	43.1	successful	0.6	59/77 -18
14.	2454.7	35	16.0	\$5203	46.5	improving	-0.79	112/107 +5
15.	4491.3	30	14.5	\$5905	44.4	improving	0.2	127/87 +38
16.	860.9	23	15.1	\$5687	53.6	reward	3.07	7/14 -7
17.	1889.2	27	15.7	\$5657	44.6	successful	1.16	57/50 +7

It is also interesting to note the district with the lowest pupil-teacher ratio had the highest SEI. Conversely, the next lowest district pupil-teacher ratio had the lowest rating on the SEI. These irregular patterns give impetus to investigating whether or not there is a common theme between successful and unsuccessful districts. There appears to be commonalties among the five highest scoring districts by virtue of the school efficiency index and the KIRIS classification. As illustrated in the following tables, all districts that have a positive rating on the efficiency index were classified in "rewards" and the five lowest performing districts were rated as "improving."

**TABLE 4**

**FIVE DISTRICTS WITH THE HIGHEST EFFICIENCY RATINGS**

District	SEI	SAI	KIRIS District Classification
11.	4.20	46.30	reward
5.	3.60	51.80	reward
16.	3.07	53.60	reward
4.	2.91	47.80	reward
3.	2.35	50.10	reward

**TABLE 5**

**FIVE DISTRICTS WITH THE LOWEST EFFICIENCY RATINGS**

District	SEI	SAI	KIRIS District Classification
6.	-2.62	47.70	improving
7.	-2.44	45.40	improving
2.	-2.10	44.70	improving
9.	-1.75	40.70	improving
1.	-1.55	44.80	improving

The initial premise of the SAI in KRS 158.6455 is districts and schools are rated on improvement not quality. This premise may be outdated since districts like Anchorage Independent, who is the highest in the state (62.9), are also rated "in decline" since they have apparently reached an optimum level of performance and find it difficult to improve to the proficiency level 10 percent more each year. Coincidentally, the school efficiency index for Anchorage Independent is 0.24 positive which indicates it was an "overachiever" when real resources were factored as compared to all other 175 districts. So the question becomes, *Is the accountability index expectation for growth unrealistic, once a certain performance level is reached?*

Evidence is mounting that the accountability index should be tiered to require more improvement at the lower levels. Schools performing at lower levels of 25 to 35 possibly should be required to retain the 10 percent expectation for improvement. As districts move up the scale to 45 or 55, considerable attention should be given to possibly lowering the expectation to a lower percentage. Further incremental lowering could then be invoked when the district index reaches 56, and so on

up the scale. KDE should revisit the reality of the premise that all schools reach proficiency by the year 2012. Unless the current accountability index is revised to reflect lowered improvement expectations as schools move toward 100, many more schools performing at the optimum level are likely to fall into decline or crisis through no fault of their own.

Free- and reduced-lunch rates for Kentucky students have risen from 38.8 percent in 1990 to 43.9 percent in 1996, which is a compelling reason to reconsider the ten percent improvement goal if the Legislature decides not to use methods to control for these such as the proposed school efficiency index.

Classroom Observations. Further investigation was done to determine whether or not there existed a common theme for success through classroom observations in 129 classrooms (53 elementary, 26 middle, and 21 high school) in the 17 districts. The hypothesis for this research was there would be higher success rates for school districts who exemplified instructional practices that were more reflective of KERA goals and expectations.

OEA staff used a 20-item checklist (Table 6) to make judgments in these classrooms about whether models of instruction were consistent with curriculum design espoused by Kentucky's Learning Goals, Academic Expectations, Transformations: Kentucky's Curriculum Frameworks, and reflective of Core Content for Assessment. Another reason for this activity was to investigate whether "opportunity to learn" conditions were somewhat consistent among districts.

**TABLE 6**

**CLASSROOM OBSERVATION QUESTIONS AND RESULTING DATA**

1.	Is the content focus directly related to at least one of Kentucky's Learning Goals?	Yes	99%
		No	1%
		Not Obs	0%
2.	Is there evidence that the lesson is directly related to at least one Academic Expectation?	Yes	99%
		No	1%
		Not Obs	0%
3.	Is the lesson textbook driven?	Yes	25%
		No	74%
		Not Obs	2%

4.	Are the instructional strategies designed to elicit interactive student participation?	Yes	89%
		No	5%
		Not Obs	5%
5.	Does the lesson involve the use of a computer?	Yes	21%
		No	75%
		Not Obs	4%
6.	Does the lesson require the use of other technology?	Yes	24%
		No	67%
		Not Obs	9%
7.	Does the lesson involve writing through either open-response items, portfolios, or on-demand writing?	Yes	64%
		No	29%
		Not Obs	6%
8.	Is there evidence of integration of subject matter?	Yes	88%
		No	8%
		Not Obs	5%
9.	Is there any evidence of authentic assessment (teachers evaluating students within the context of daily activities and documenting strengths and weaknesses)?	Yes	78%
		No	4%
		Not Obs	18%
10.	Are the students aware of expected levels of performance through rubrics or standards?	Yes	68%
		No	3%
		Not Obs	29%
11.	Is the lesson plan rich in content as well as engaging, requiring higher-level thinking and problem-solving?	Yes	84%
		No	6%
		Not Obs	9%
12.	Is the lesson developmentally appropriate for the age of the students? (At the elementary level)	Yes	59%
		No	0%
		Not Obs	41%
13.	Is the role of the teacher one of a facilitator that invites interaction by motivating, challenging, encouraging, inviting reflection, and giving feedback?	Yes	92%
		No	2%
		Not Obs	2%
14.	Is there evidence of cooperative learning?	Yes	67%
		No	22%
		Not Obs	12%
15.	Is there evidence of usage of <u>TRANSFORMATIONS--Ky's Curriculum Frameworks</u> ?	Yes	67%
		No	11%
		Not Obs	22%
16.	Is there evidence of usage of <u>CORE CONTENT</u> ?	Yes	77%
		No	5%
		Not Obs	18%
17.	Is there evidence of multiple-choice test usage?	Yes	6%
		No	83%
		Not Obs	11%

18.	Can the classroom be categorized as one which espouses performance assessment as required by KIRIS?	Yes	82%
		No	9%
		Not Obs	9%
19.	Is there any evidence of "curriculum narrowing" to accommodate a certain grade's test preparation?	Yes	9%
		No	44%
		Not Obs	47%
20.	Is there evaluation and reflection on the skills or concepts covered?	Yes	79%
		No	3%
		Not Obs	18%

Question: Did the classroom observation data reveal KERA/KIRIS-like instructional practices were more prevalent in the higher performing districts? YES

Questions 4, 7, 11, and 18 were selected from this checklist that most characterized whether or not classrooms were practicing KERA/KIRIS-like pedagogy. Tables 7 and 8 illustrate performance on these aforementioned questions.

The five districts with the highest KIRIS and SEI ratings and their resulting percentages of KERA/KIRIS-like classroom-practice indicators on the four questions.

**TABLE 7**

**OVERACHIEVERS**

District	SEI	SAI	KIRIS Classification	% Yes
11.	4.20	46.30	reward	87.50
5.	3.60	51.80	reward	91.50
16.	3.07	53.60	reward	81.50
4.	2.91	47.80	reward	86.25
3.	2.35	50.10	reward	90.00
Average	3.23	49.92		87.35%

**TABLE 8**

**UNDERACHIEVERS**

District	SEI	SAI	KIRIS Classification	% Yes
6.	-2.62	47.70	improving	80.50
7.	-2.44	45.40	improving	92.75
2.	-2.10	44.70	improving	84.75
9.	-1.75	40.70	improving	71.00
1.	-1.55	44.80	improving	62.75
Average	-2.09	44.66		78.35%

Correlation between the two groups on implementation of KERA/KIRIS-like instructional practices is -0.059. This evidence suggests the need for further study to determine the impact of quality instructional practices on school performance.

**Summary**

It is unfortunate that 1996-97 KIRIS data were not available at this writing; however, careful analysis will need to be performed to determine if trends continue downward for middle and high schools. The results of the KIRIS audit currently being conducted to determine whether the recommendations forwarded by the OEA technical panel in 1995 were implemented should play a major role in redesigning KIRIS. The audit will also assess KDE performance in managing the program and make recommendations for any needed changes in oversight. The audit results are due from Coopers and Lybrand L.L.P. on December 31, 1997.

The brief sketch presented here does not do justice to the many complexities inherent in a program that was designed to improve teaching and learning in the Commonwealth. The road has been "uphill and rocky" most of the time for KDE in implementing what is unequivocally the most ambitious effort in the country to transform education. KIRIS has undoubtedly improved the quality of teaching and raised the inquiry level of all educators, parents, and policy makers as to what students should know and be able to do by the time they graduate from Kentucky schools.

## Recommendations

1. The Office of Education Accountability agrees with the recommendations forwarded by the Task Force on Assessment and Accountability and suggests the Legislature give serious consideration to modifying the SAI to be a fairer and more objective measure of school success. At the same time, the Legislature should consider "leveling the playing field" in at least a portion of the index to correct for factors beyond the control of the school through the development of a "school efficiency index."
2. The Kentucky Department of Education and the Kentucky Board of Education should consider subscaling the performance standards to give schools credit for moving students up the scale. The wide gap (60 points) between apprentice at .4 value, and proficient at 1 value is unwieldy and unfair. Schools could conceivably move all students to .9 value on the scoring theta and only receive .4 value, or apprentice, when aggregated in the school accountability index.
3. The Office of Education Accountability recommends any redesign in the accountability index reflect Threshold Standards that recognize both high achievement and improvement, but with slightly different consequences. The following model suggests various consequences:

If a school's accountability index on a scale of 100 is:

- **less than 35**, there should be required assistance and state intervention, including review team visits and distinguished educator placements.
- **36-45**, improvement plans should be developed (rewards in the form of competitive mini-grants for exceptional improvement).
- **46-60**, maintenance provisions with no state intervention should be implemented (rewards for exceptional improvement in the form of competitive mini-grants for school improvement).
- **61>**, rewards and commendations with continued improvement expectations over time should be provided.

4. The Office of Education Accountability also supports continuation of high stakes for schools, teachers, districts, and students as impetus for continuing classroom transformation. There appears to be growing evidence that rewards (as a teacher bonus) may be too divisive to be productive for schools. Recent surveys conclude teachers are more driven by the fear of sanctions than by the potential for cash rewards. As a result, the Office of Education Accountability suggests there must remain an incentive for improvement, but the rewards should be couched in the form of school improvement rather than the current "teacher bonus" model. This could be achieved through legislation that would set an appropriation for schools who exceed their goals to write proposals for school improvement which could be in the form of additional technology, instructional supplies, teacher aides, playground equipment, and professional development.

## DISTINGUISHED EDUCATOR PROGRAM

**Overview.** KRS 158.782 identifies the position of "Kentucky Distinguished Educator." The statute describes the distinguished educator's role as:

- Serving as teaching ambassadors to spread the message that teaching is an important and fulfilling profession.
- Assisting the Kentucky Department of Education (KDE) with research projects and staff development efforts.
- Accepting assignments in schools whose percentage of successful students declined as described in KRS 158.6455. The assignment shall require the educator to:
  1. Work in a school on a full-time or part-time basis for a designated period of time to assist the school staff in the implementation of its school improvement plan. The educator shall have the authority in a school in crisis to make decisions previously made by the school staff.
    - The school improvement plan currently used by distinguished educators is the School Transformation, Assistance, and Renewal (STAR) project. This program is designed as a high quality planning and assistance process combining fiscal resources (Commonwealth School Improvement Fund) and the distinguished educator. It contains both an internal and external review component. STAR, as defined by KDE's publication, Kentucky Education Reform, The First Five Years, 1990-1995, is as follows:

*STAR emphasizes both the necessary school consensus for change and the design for long-term capacity, not continued dependency. The project is focused on student performance, strategic planning, staff and community participation, intense professional development, and continuous analysis of student performance. Results form the basis of monthly reports to the school-based council, the district, and the Kentucky Department of Education.*
  2. Help to increase the effectiveness of the staff, parents, the civic and business community, and government and private agencies in improving the school's performance.
  3. Evaluate and make recommendations on the retention, dismissal, or transfer of certified staff in a "school in crisis."

Fourteen additional Kentucky educators were named distinguished educators in 1996-97, bringing the total designated to 134. Of the 134, 48 positions have been funded to work with 185 schools. Based on their KIRIS scores, these 185 schools are categorized as follows: 9 in crisis, 88 in decline, and 88 Improving Category 2 schools.

Each distinguished educator helps her/his assigned school(s) develop and implement a transformation plan and institute the STAR project for the school. The transformation plan is a 2-3 year process that emphasizes "bottom-up" planning -- school-by-school to district level. The plan, based on a comprehensive needs assessment, should detail resources and expertise to address the identified needs.

In Office of Education Accountability staff visits to schools assigned distinguished educators, the response from faculty has not been as positive as in past years. The fact that distinguished educators have been spread so thinly during this past year has raised questions as to their effectiveness. Schools report seeing their distinguished educator once every two weeks and express concern over what impact the distinguished educator can have in such situations.

Training for new distinguished educators consisted of seven sessions. The sessions covered topics mandated by KRS 158.782: personnel evaluation, school organization, school-based curriculum development, and KIRIS assessment. Also included were principal assessment from the National Association of Secondary School Principals, school finance, school-based decision making councils, STAR, and general informational materials.

### **Recommendations**

The need for additional distinguished educators seems to have reached the crisis stage. If distinguished educators are not available to schools in decline, can they be held accountable if they do not improve? We would maintain that a minimum ratio of distinguished educators for the 185 schools should be a 1:1 for schools in crisis and 3:1 for all other categories.

# EDUCATION PROFESSIONAL STANDARDS BOARD

**Overview.** The Education Professional Standards Board (EPSB) has prepared a legislative program which will maintain their relationship as a part of the Kentucky Department of Education (KDE). Their proposal includes an item to have the EPSB president sit as a member of the Kentucky Board of Education as the Commissioner sits as a member of the EPSB.

EPSB has employed Dr. Susan Leib to serve as interim executive secretary while they conduct a search for a new executive secretary. EPSB has two new members: Doris S. Barlow and Beverly Lee Tomlin. Rosa Weaver and Ray Nystrand have been reappointed to serve an additional term.

EPSB has promulgated 704 KAR 20:555, professional certificate for college faculty: secondary education as required by KRS 161.048. This will allow college faculty to be certified for secondary education after completing an intern program.

EPSB has drafted an emergency regulation, 704 KAR 20:022 (to implement a portion of House Bill 305 of the 1996 Regular Session of the General Assembly), which identifies the procedures to be followed when a teacher chooses the continuing education alternative for certificate renewal and advancement in rank. This will involve the development of an individualized professional development plan which includes goals related to continuous growth on each of the Experienced Teacher Standards. Evidence of the accomplishment of this professional development plan will be reviewed and scored by a state team.

Minority Educator Recruitment and Retention (MERR). The MERR office, with a budget of \$680,000, designates \$424,400 for grants and scholarships. Scholarships are provided to institutions for minority candidates in teacher preparation programs. Grants are made to school districts for programs designed to encourage minority students to pursue a career in teaching. MERR currently has the following summer programs:

Christian County Public Schools.....	STAMP Summer Institute
Eastern Kentucky University.....	Minority Teacher Education Program
Jefferson County Public Schools.....	Escorts to Success
Kentucky State University.....	Teacher Recruitment Leadership Institute
Morehead State University.....	Minority Teacher Education Program
Murray State University.....	Teacher Education Admission Prep Program
University of Kentucky.....	TeacherBridge
University of Louisville.....	TeacherBridge

Programs offered fall into two categories: (1) academic enrichment and career awareness, and (2) teacher education preparation.

*Academic Enrichment/Career Awareness:* Middle/High School Programs - Christian County Public Schools, Eastern Kentucky University, Jefferson County Public Schools, and Morehead State University each have developed programs to work with middle and high school students in addressing critical issues in academic achievement while encouraging the participants to consider the field of education as a possible career choice. Kentucky State University's TRLI Program has been funded by MERR over the past three years, but the institution does not have a program this summer.

Each program provides daily activities which include guest speakers on topics of interest and field trips along with skills enhancement in the areas of mathematics, English, computer science, and African American history and culture. MERR is actively involved in each of these programs and staff serve as guest speakers to inform the students about the programs and the MERR scholarship. Staff also observe daily classroom activities and assist in chaperoning field trips.

*Teacher Education Preparation:* Murray State University - Murray State University's program involves minority teacher education majors in preparation for the ACT examination as part of the teacher education admission process. The coordinator of the MERR Scholarship program found that many of the scholarship recipients did not have ACT scores at the level for admission to Murray's teacher education program. This hurdle prompted collaboration with the University's Continuing Education and Academic Outreach Program to provide these students with an opportunity to enhance their test-taking skills prior to ACT examination.

Since 1992-93, the number of minorities graduating from teacher education programs at our public universities has risen from 25 (1992-93) to 226 (1996-97). Additionally, our state universities report a total of 969 minority students enrolled in teacher education. MERR also oversees alternative certification. During the past four years, 93 teacher trainees were admitted to the alternative certification program. To date, 57 have successfully completed the training, passed the NTE, and are in classrooms; 15 are still in the program; and 21 have just started the program.

MERR works with local school districts to gather information on minority hiring. They report that for 1996-97 there were 409 minority applicants for certificated teacher positions, of which 159 were hired. There were 137 minority applicants for administrative positions, 35 of which were hired. This brings the number of minority teachers to 1,820 or 4 percent of the teaching

staff. KDE student data reports that there are 81,431 (12.6 percent) students identified as a minority of the 647,235 students in the Commonwealth. These figures demonstrate the continued need for certified minority employees if our teacher workforce is to ever come close to mirroring our students.

Revocation. During the period from July 1, 1996 to August 1, 1997, there were 129 initial reports filed with EPSB and 132 character/fitness reviews. These resulted in 18 revocations, 16 suspensions, and 23 other cases ordering training. As of September 6, 1996, the status of open cases was 47 character/fitness reviews, 47 initial report reviews, and 31 cases for hearing. EPSB has one full-time and one part-time prosecutor, two part-time investigators, a legal advisor from the Attorney General's Office, and hearing officers assigned as needed by the Attorney General's Office. The revocation process continues to improve as indicated by the decrease in carryover cases, while cases reported increased.

### **Recommendations**

1. The shortage in principal candidates at all levels continues. It is particularly acute at the secondary level. Several programs have been initiated to address the problem, most notably the University of Louisville/Jefferson County Schools project, the Kentucky Valley Educational Cooperative/Morehead State University/Eastern Kentucky University/University of Kentucky, and Central Kentucky Cooperative initiatives. The Education Professional Standards Board should provide the lead in all studies seeking solutions to this problem and should encourage the creation of other programs, as well as other solutions to the principal shortage. Additionally, there are two doctoral students at the University of Kentucky identifying this problem a part of their dissertations.
2. It would seem appropriate to review the material from the validation panels for the middle school academic area tests being developed by the Educational Testing Service for appropriate passing scores. It appears to be most inappropriate to allow any group to be certificated without achieving a defensible cutoff score.
3. As the Education Professional Standards Board reviews the revised program of studies, it would seem necessary for the Board to set appropriate parameters for certification for elective classes developed by local school districts.

**Overview.** At its June 1997 meeting, the Interim Joint Education Committee directed the Office of Education Accountability to conduct a study of special education services in Kentucky, addressing the following specific issues:

- 1) To determine whether students with disabilities statewide are being provided an adequate education;
- 2) To determine whether student Individual Education Programs are being implemented to the fullest extent;
- 3) To determine whether students with disabilities are dropping out of school at increasing rates;
- 4) To determine whether students with disabilities are being provided access to the core curriculum and courses leading to a diploma to the extent possible; and
- 5) To determine whether these students are being provided services by properly certified teachers.

A comprehensive report will be provided to the Committee on January 1, 1998, and in view of that, this section of the Annual Report will be limited.

Legislative. The Individuals with Disabilities Education Act (IDEA) was reauthorized in 1997, with many of the amendments effective immediately. Numerous changes in the statute will require regulatory changes in Kentucky and may, in some instances, alter the focus of some Kentucky initiatives in special education. To Kentucky's credit, some mandated changes are already common practice in this state. For example, IDEA amendments require that students with disabilities must be included in statewide assessment programs, and the states were given until July 1, 2000, to develop alternate assessment protocols for students requiring those. In Kentucky, all children and youth with disabilities have been included in this state's assessment program since its inception. Kentucky also requires local districts to provide data on suspensions and expulsions of disabled students, a new reporting requirement contained in the 1997 IDEA amendments.

The 1997 amendments emphasize the importance of ensuring that students with disabilities participate in the general education curriculum to the maximum extent appropriate. Requirements for reevaluation of special education students, currently every three years, have been relaxed if no

additional information is needed to determine continued eligibility and the parents do not request additional assessment. The amended statute explicitly requires special consideration of the provision of Braille for blind or visually impaired students; the language needs of disabled students, particularly those with hearing impairments; the needs of disabled students who have limited English proficiency; and interventions, strategies, and supports including behavior management plans for students whose behavior adversely impacts their ability to learn. There is increased emphasis on mediation as a dispute resolution mechanism, and the statute explicitly addresses placement procedures in alternative educational settings for students who bring weapons to schools or are involved in activities related to illegal drugs.

Administrative. Several regulatory changes are necessary to bring Kentucky into compliance with the 1997 amendments. The Division of Exceptional Children Services (DECS) has identified most, if not all, of the regulations and will be taking appropriate action during the upcoming year.

Concern is expressed by advocates for students with disabilities that proposed changes to 704 KAR 3:305 increasing graduation requirements will negatively affect efforts to provide appropriate transition programs for these students and might increase the dropout rate.

DECS is also involved in task force work regarding the licensing and certification of educational interpreters for citizens who are deaf and hard of hearing, and regulations will be forthcoming in this matter.

**Program Implementation.** DECS continues to operate under a "Corrective Action Plan" with the United States Department of Education's Office of Special Education Programs (OSEP) as a result of the monitoring by OSEP conducted last year. Substantial steps in compliance have been taken. Kentucky School for the Blind and Kentucky School for the Deaf, as well as adult correctional facilities, have been monitored and corrective action plans have been drafted for those facilities. DECS continues its traineeship support of the vision impaired program. A technical assistance manual on occupational and physical therapy has been revised and distributed to districts. Further, DECS has initiated an occupational therapy/physical therapy scholarship program to assist students with college fees in return for commitments to provide services within the Kentucky educational system. DECS has addressed OSEP-identified issues regarding least restrictive environment, transition services, and Individual Education Programs (IEPs) with local districts. Monitoring of local districts in areas of transition requirements has been expanded. DECS continues to provide training for staff working with students with emotional-behavioral disabilities (EBD) through its EBD institute. Further, identified schools in the state are receiving

training on school-wide approaches to prevention of behavior problems and early intervention as part of a model school project. DECS continues to monitor the identification rate in local districts for EBD students and to focus efforts on elementary screening and intervention of students who are high risk. A statewide consultant network has been developed consisting of individuals willing to provide technical assistance in districts experiencing problems serving identified students.

Although KDE was not a party to a Consent Decree between the Cabinet for Human Resources (now the Cabinet for Families and Children{CFC}) and the United States Department of Justice regarding services in juvenile treatment facilities, KDE has worked with the Department of Juvenile Justice (to whom the programs were transferred from CFC) and has provided special education monitoring in each facility. Substantial problems were located in some of these facilities. Corrective action plans will be drafted to address the problems. Additionally, DECS committed to providing workshops at statewide conferences to assist in training educational staff of these facilities.

In response to a study commissioned by DECS and funded by the Developmental Disabilities Advisory Council, DECS is devoting additional time and resources to address increasing dropout rates in local districts. Mini-grants of \$3000 each have been sent to seven districts with high dropout rates, and DECS is engaging in efforts to develop and expand the number of districts providing special education initiatives in vocational programs.

Staffing at DECS has not substantially changed. Forty-one staff positions are assigned exclusively to exceptional children programs. These include 30 positions within the DECS central office, 8 exceptional children consultants located in the regional service centers, and 3 exceptional children staff working in the Office of Learning Programs Development. These three staff members devote their time to exceptional children issues within that office.

DECS received 72 formal complaints during the 1996-97 school year. Three of these complaints were withdrawn. Twenty-nine were resolved in an early resolution process developed by DECS wherein the district is informed of the complaint and given an opportunity to resolve it with the complainant prior to formal DECS intervention. Although problems have been experienced with one special education coordinator being inappropriately aggressive in attempting to force early resolution, the process otherwise seems to work well, resulting in expeditious resolutions. Four of the complaints were filed on behalf of classes. Corrective action plans were required in 26 of the complaints. Of the 32 reports issued by DECS in response to the complaints, 17 were filed more than 10 days after the 60-day deadline passed. This performance, however, is substantially

improved over the 1995-96 school year when only 2 of 60 complaints were processed within the mandatory 60-day deadline. Complaints continue to increase. During the last three years, 41, 45, and 72 complaints have been filed, by year, with DECS.

Forty-seven hearings were requested from DECS since July 2, 1996 for the 1996-97 school year. Eleven decisions have been rendered with seven still pending. Twenty-two hearings were cancelled, as settled or otherwise resolved. Of the total 119 formal complaints and hearings filed and requested, only 40 counties were involved. The vast majority of the counties were involved in only one proceeding. Five counties accounted for 33 of the complaints and hearing requests.

### **Recommendations**

Recommendations related to special education will be contained in the report provided to the Interim Joint Education Committee on January 1, 1998.

## EXTENDED SCHOOL SERVICES

**Overview.** KRS 158.070 mandates all school districts provide additional instructional time in an attempt to close the achievement gap for low-performing students who may need additional time to achieve expected outcomes. 704 KAR 3:090 specifies the program must meet one of the following criteria:

- To sustain student's present level of performance and prevent the student from falling behind.
- To provide extended programming for students who have been retained.
- To provide assistance for students who are at risk of failing to graduate on time.
- To close the achievement gap of low-performing students so they can perform at the appropriate age level.

The 1991-92 budget for this program was \$21.4 million and increased in the 1997-98 biennium to \$34 million per year. The 1996-97 school-year appropriation was \$33.9 million. The Kentucky Department of Education's (KDE) appropriation request for the 1999-2000 biennium is \$36 and \$37 million per year.

Annual grants are made to school districts using a formula based on 50 percent average daily attendance and the remaining 50 percent from Kentucky Instructional Results Information System (KIRIS) scores, dropout rates, and percent of free lunch eligibility. The Kentucky Board of Education (KBE) adopted 704 KAR 3:390, setting a permanent formula. In 1996-97 annual adjustments ceased.

While after-school tutoring and summer school are the prevailing models, innovation has been encouraged. Up to 5 percent of the total appropriation can be set aside each year for innovative grants that encourage alternative methods for enhancing student success. Approximately \$772,000 was allocated in 1997-98 to 33 schools representing 27 districts for innovative programs. KIRIS results from these districts indicated that four were in rewards, one was successful, and twenty-two did not meet their goal. Some of the alternative models include portfolios, summer preparation programs, transition, expeditionary learning, and accelerated learning. Table 16 illustrates that 4224 students participated in innovative programs.

The Office of Education Accountability (OEA) remains concerned that not enough evaluative data are being collected on the innovative programs to justify this expenditure. The original intent of this program was to serve as models for experimentation that could be replicated in other districts. Without having cost/benefit ratio information, it will be difficult for other districts to benefit from replication.

*Program Results FY 96.* Evaluation data for 1996-97 were gathered through student level data sheets, observations in schools, and district audits. The following is an analysis prepared by KDE.

Impact of Extended School Services (ESS) Programs: Significant changes were noted in letter grade achievement for students attending ESS programs for six or more days during the regular school term (Tables 9 and 15). At program entry, less than 10 percent of students served six or more days had entry grades of A or B in the primary subject of focus, but 37 percent had A or B grades at the end of the school term. Conversely, 71 percent had entry grades of D or F in the primary subject of focus, while only 17 percent had D or F grades at the end of the school term. [Eighty percent of all students attending ESS programs six or more days (89,436) improved one or more letter grades in their primary subject of focus, while 18 percent maintained their prior grade.] It is significant to note in both the primary and secondary subjects of focus, approximately 90 percent of students served six or more days, entered with grades of C or lower, which would seem to indicate ESS is serving primarily students at risk of failure.

**TABLE 9**

**STUDENT ACHIEVEMENT LEVEL FOR ESS LEARNING GOALS  
REGULAR TERM 1996-97**

	F	D	C	B	A
Subject 1 Entry Grade	22*	49	19	9	1
Subject 1 Exit Grade	3	14	50	26	7

\*Numbers represent percentage of students - (Based on 89,436 students).

In addition to letter grade improvement, additional qualitative impact data were gathered on students who attended ESS programs six or more days. Teachers reported 20,016 students were promoted or graduated on time as the result of having participated in ESS programs. The referring teachers for ESS students also note significant qualitative changes in the areas of completing homework, increased class participation, and improved attendance (Figure 2).

**FIGURE 2**

**OTHER GOALS ACHIEVED**

	Regular Term
Graduated From High School	1,790
Promoted To Next Grade Level	18,226
Improved Attendance	5,091
Completing More Homework	38,677
Increased Class Participation	33,960

*ESS Program Demographics.* Data gathered during the 1996-97 regular school term indicates 145,700 students were served by ESS programs throughout the state (Table 10). This is an increase of approximately 21,000 students from the 1995-96 regular school term. Increases in the number of students served were noted at all grade levels with the exception of Grade 8. Approximately 53 percent of all students served are found in primary grades through Grade 6, while 26 percent and 21 percent respectively were served in Grades 7-9 and 10-12.

As a result of KIRIS assessments covering more grades in 1996-97, the participation is more evenly distributed among all grades. However, in fourth grade the participation in the first year of KIRIS assessment is more profound.

**TABLE 10**

Grade Level	Number of Students	Percentage
PM (P1, P2, P3, P4)	31,801	21.8%
4	19,432	13.3%
5	13,957	9.6%
6	11,608	8%
7	13,277	9.1%
8	10,987	7.6%
9	12,727	8.7%
10	12,148	8.3%
11	10,835	7.5%
12	8,039	5.5%
OU	880	.6%
TOTAL	145,700	
K-6		53%
7-9		26%
10-12		21%

Demographic data collected during the regular school term indicate 51 percent of all students served were male while 49 percent were female (Table 12). There were significantly more male students than female students served at the primary and middle school level. Female students outnumbered male students at the secondary level. A further analysis of data indicates a slightly larger number of female students were served on a short-term basis (1-5 days) than male students. Eighty-seven percent of all students were Caucasian while 14 percent were minority students (Table 13). The number of students being transported by ESS programs (61,014 students) is significantly higher than prior years with a slight increase in the overall percentage (42 percent) of students transported by ESS programs (Table 14).

After-school programs continue to constitute the majority of all ESS program models, although a slight increase was noted in the number of students served in before-school, evening, and Saturday programs.

A significant shift towards a shorter term program was noted with 38 percent of all students being served from 1-5 days, 31 percent served 6-15 days, 15 percent served 16-25 days, 9 percent served 26-40 days, and 7 percent served more than 40 days (Table 11). A further analysis indicates approximately 58 percent of all students served at the primary and Grade 4 level were served 6-25 days while the majority of students in Grades 6-12 were served 1-15 days.

**TABLE 11**

**LEVEL OF ATTENDANCE**

	Number of Students	Percentage of Students
1-5 Days	54,789	38%
6-15 Days	45,095	31%
16-25 Days	21,248	15%
26-40 Days	13,289	9%
40+ Days	9,804	7%

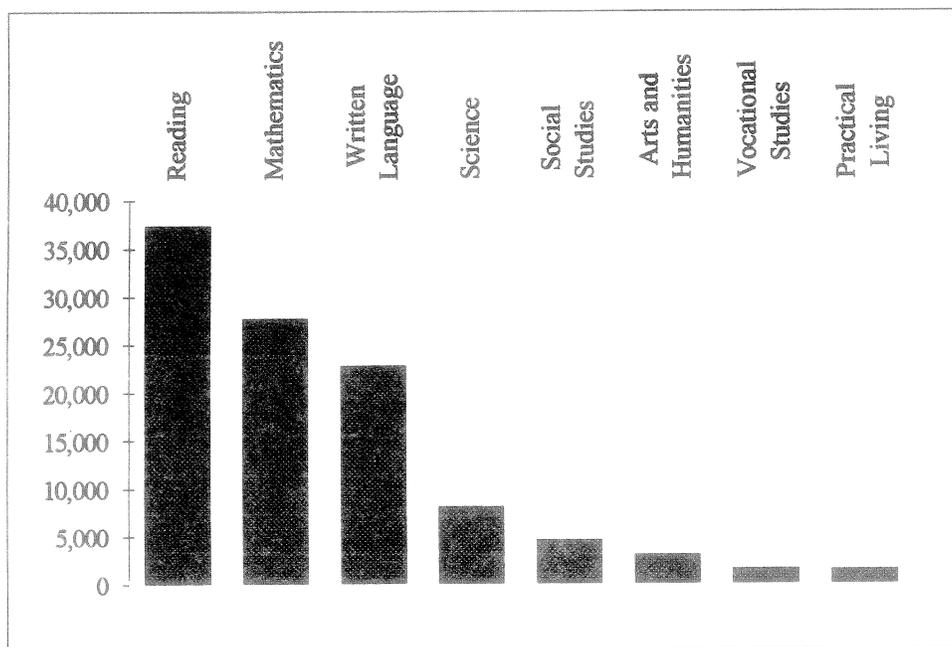

As has been the case in the past, reading, mathematics, and written language constitute the majority of goals for students being addressed by ESS programs throughout the state. However, goals in the area of science show a slight and encouraging increase (Figure 3).

Significant highlights of goal-related data include:

- Approximately 67 percent of all students served at the primary program level were referred for assistance in the area of reading.
- Although reading continued to be emphasized in Grade 4 (33 percent), the major emphasis shifted to written language (47 percent) where short-term assistance with portfolio development became a priority.
- Written Language was the primary subject of focus for students in Grades 7 and 12.
- Mathematics was the major goal of emphasis in Grade 5 and remained the priority goal through high school with the exception of Grades 7 and 12.

FIGURE 3

### PRIMARY SUBJECT OF FOCUS

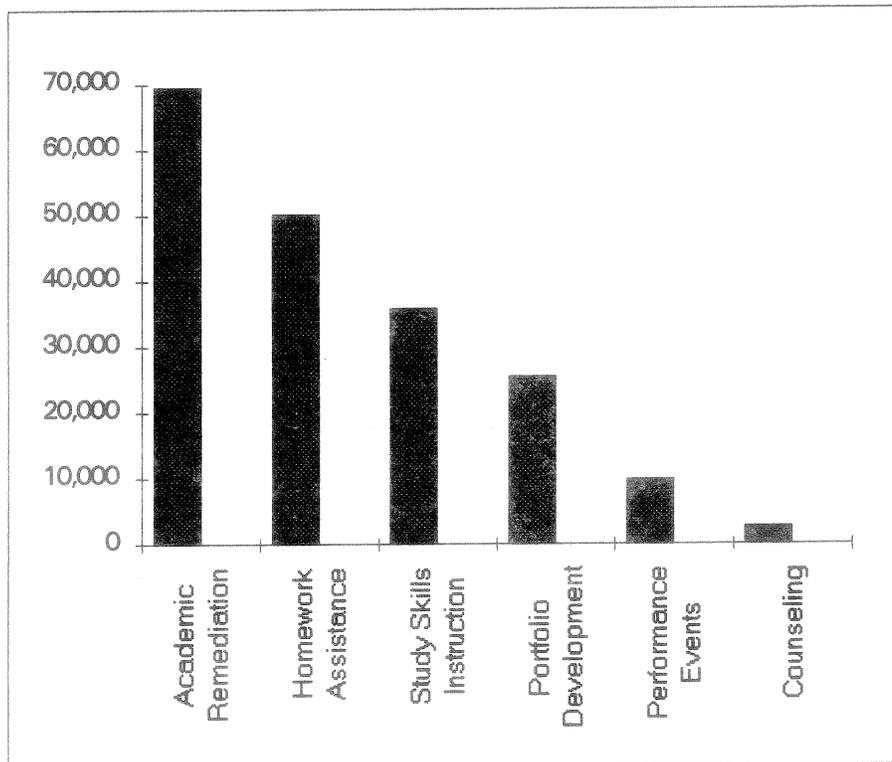

In terms of the types of assistance offered by ESS programs (Figure 4), academic remediation (67 percent) was the major type provided to students followed by homework assistance (47 percent), study skills instruction (34 percent), portfolio development (24 percent), performance events (9 percent), and counseling (3 percent). Academic remediation was listed as the primary type of assistance provided at the primary level and at Grades 5, 6, and 12. Students in Grades 7-11 primarily utilized homework assistance. Study skills instruction was listed as the

second priority for the primary level and Grade 5. Portfolio development was listed as the primary type of assistance provided at Grade 4 level. It is significant to note the majority of students were provided multiple types of assistance while being served by ESS programs throughout the state.

Number of Students Also Participating in An Innovative Grant	4,224
--	-------

*Site Observations and Audit Reports.* ESS consultants conduct on-site school visitations in the regular school term and/or the summer term in every district assigned to them. They periodically visit each innovative grant site in their region to ensure the program is developing on schedule and to provide assistance. Site visits include observations of classroom programs and interviews/surveys with students, staff members, and ESS teachers. Audits include a more detailed look at the financial records of the district. Each consultant provides a brief written report about site/audit visits. Technical assistance is provided to districts as necessary.

General observations from site/audit visits follows:

<b>Observations</b>	<b>Comments</b>
<p>High schools are becoming dissatisfied with the summer school program. Many schools have offered second chance programs in which a student could come to summer school to make-up a half or full credit that had been failed. There is a general feeling this is becoming a crutch to secondary students and they are not trying enough during the regular school term because they think they can obtain the credit with less effort and time.</p>	<p>It is satisfying to observe that more schools are beginning to set higher standards for their summer programs. They are also offering smaller summer programs and targeting their funds to a more preventive model during the regular school term. Many are instituting policies to alleviate this concern. Some policies observed:</p> <ol style="list-style-type: none"> <li>1) setting a limited amount of time a student may have to work on an "incomplete" grade,</li> <li>2) limiting the number of make-up credits to one-half credit for the summer,</li> <li>3) requiring the student to attend ESS during the regular term before he/she can attend a summer program, and</li> <li>4) designing programs around a syllabus provided by the regular teacher.</li> </ol>
<p>ESS building-level coordinators are employed in most schools. Some teach ESS and also oversee the ESS program. In larger schools many are providing oversight to the program only. They are responsible for such things as calling parents if students are absent from ESS, handling referrals, keeping principals and councils informed of the ESS program, keeping records of student and staff attendance, overseeing student tutors, managing the bus schedule, handling student data forms, monitoring the expenditures of ESS funds, observing the ESS classrooms, and others.</p>	<p>This is a positive action. It has provided better communication within the school and between the school and central office. The coordinators also are good contacts between the ESS Branch and the ESS teachers in each school. Modules developed by the Branch have been targeted to the coordinators as a means to better inform ESS teachers and school councils of effective practices and important information. There are seven user-friendly modules which can be delivered by the coordinators or other consultants. The topics are needs assessment, legislative intent, major ESS resources, ESS recordkeeping, identifying the ESS student, ESS program evaluation, ESS program development, ESS financial reporting, and developing a job description. The coordinators also are effective ESS representatives to School Consolidation Planning.</p>

Observations	Comments
<p>A large percentage of districts are now allocating ESS funds directly to the school councils using some type of formula. Most formulas are various combinations of enrollment or average daily attendance, dropout rate, cognitive indices, and free and reduced lunch. Districts use those factors they deem most appropriate to them.</p>	<p>This movement encourages more involvement of the school councils in the ESS program. It makes the councils more aware of the potential impact of ESS on the school's instructional program. There has been some movement by councils to design ESS programs primarily around portfolio completion and KIRIS preparation for the grade levels being tested. The ESS Branch communicates on a regular basis with district and building coordinators to ensure other students at all grade levels who need academic help in the regular classroom aren't being overlooked.</p>
<p>Many schools are incorporating activities into ESS programs that are context driven in order to assist the student to better comprehend the subject-area material. Such activities can also be supportive of performance on KIRIS.</p>	<p>Authentic learning experiences allow the student to do more than memorize information, but allows him/her to understand the relationship between learned material and real life. At all times, teachers ensure that such experiences are designed around specific learning goals that are needed by the ESS students.</p>
<p>Many schools are unaware of important district policies which are an integral part of the ESS program. Many district policies are less than adequate for the purposes designed. Such policies that provide criteria for the employment of ESS staff, selection of ESS students, process for appeal of selection for ESS, and others are very important to the school and district.</p>	<p>The ESS Branch will be reviewing the policies in an upcoming meeting with district coordinators. The meeting will focus on the reason for the policies and the necessary elements in each. Follow-up activities will be provided to building level coordinators by ESS consultants.</p>
<p>As with other programs, ESS financial audits reveal many districts are struggling with the MUNIS system. ESS in particular has required some adjustment of codes due to the "beyond the school day" schedule of the program. In the past, district coordinators kept most ESS financial records.</p>	<p>MUNIS requires a closer collaboration among the district coordinator, the building level coordinators, and the finance personnel in the district to ensure appropriate coding and expenditures.</p>

Observations	Comments
<p>As more districts and schools move into the development of consolidated plans, it is apparent that school councils must be far more aware of the various programs within the schools. At times, inappropriate and/or illegal activities or expenditures are approved by a council because it was unaware of the parameters for various programs.</p>	<p>KDE is now planning integrated training opportunities for school districts in consolidated planning. Both central office and building level staff must be involved in training to ensure ample knowledge is present at the school level. ESS will continue to work on this issue with ESS Building Level Coordinators as well.</p>

**Summary.** Overall, ESS has been rated one of the more positive KERA initiatives by school administrators and teachers during OEA's district monitoring visits. This is not a "one size fits all" program. Districts and schools are continually tailoring models for tutoring and instruction to meet the needs of individual students. The intent of the statute and regulations governing this program were intentionally designed to give latitude to schools in assisting students to meet expected outcomes.

Although this is a somewhat expensive program, the benefits are significant. At least four out of every five students who attend six or more days improve by at least one letter grade in the primary subject. OEA remains concerned, since KIRIS performance is the "measuring stick" for schools, that not enough congruence exists in the evaluation of ESS and KIRIS at the student and school level.

**Recommendations**

1. The Kentucky Board of Education and the Kentucky Department of Education should consider revising the formula for grant allocations to allow low performing districts vis-à-vis KIRIS, CTBS, and ACT to receive a greater share of the ESS appropriation. At the same time, the Kentucky Department of Education's regional service center ESS consultants should devote a larger share of their workload to these same districts and perform a quality review of ESS programming in those districts. Failure of the under-performing districts to transform as per ESS consultants' recommendations, should result in the district being reported to the Office of Education Accountability for investigation of nonfeasance.

2. The Kentucky Department of Education should revise the evaluation of the ESS program to show a district-by-district profile of trends over a five-year period on KIRIS, CTBS, ACT and other available cognitive and noncognitive data to reflect potential impact of extended school services.
3. The Office of Education Accountability recommends full funding of extended school services as per the Kentucky Department of Education's appropriation request.

## FAMILY RESOURCE AND YOUTH SERVICES CENTERS

**Overview.** The family resource and youth services centers (FRYSC) program is a \$39,626,000 initiative, currently serving 934 schools through 588 centers. Total enrollment in the schools served is 431,335, with 208,416 (48 percent) being free or reduced lunch eligible. The program is administered by the Cabinet for Families and Children (CFC) in a direct contractual arrangement with participating districts. Dr. Sandy Goodlett was hired in early 1997 as the director, and is assisted by Sissy Cawood. The intent of KRS 156.497(2) is, "The centers shall provide services which will enhance students' abilities to succeed in school."

FRYSC grants range from \$10,800 to \$90,000 (averaging \$70,000) and are awarded on a competitive basis to schools where more than 20 percent of the total enrollment are eligible for free or reduced lunch enrollment as defined by the National School Lunch Program income guidelines. The centers are located in or near the participating schools and act as a referral center to the health and social services that exist in a community.

**Implementation.** During FY1997, three new field liaisons were hired to assist in the workload previously shared by five liaisons. The Kentucky Department of Education's (KDE) Biennial Budget Request for FY1999 includes \$6,137,500 additional and the FY2000 request is for an additional \$12,015,000 which would fund a center to serve all additional eligible schools.

The 588 centers are all unique in their programming and are encouraged to focus their efforts on issues confronting the particular constituency of students served. Core services for a family resource center as mandated by KRS 156.497 include:

- assistance with full-time preschool child care for children two and three years of age
- assistance with after-school child care for children ages four through twelve
- health and education services for new and expectant parents
- education to enhance parenting skills, including education for preschool parents together with their children
- support and training for child day care providers
- health services or referral to health services

Youth services centers are required to provide the following basic core components:

- health services or referral to health services
- referrals to social services
- employment counseling, training, and placement for youth
- summer and part-time job development for youth
- substance abuse services or referral to substance abuse services
- family crisis and mental health services or referral to mental health services

In addition to core components required by legislation, centers choose to provide a variety of other complementary services. Examples of optional services for a FRYSC might include 1) recreation programs; 2) assessing child and family needs such as housing, social services, and financial management; and 3) information clearinghouse and other services deemed valid for family maintenance. At the middle and high school levels, the focus is on the needs of youth as they face the problems of adolescence and adulthood. These services might include 1) consulting with school officials regarding behavioral and discipline problems, 2) coordinating with the local legal system, and 3) developing recreational and volunteer programs.

The Office of Education Accountability (OEA), in visiting FRYSCs in 17 districts during the 1996-97 school year, observed improvements in the areas of CFC coordination between centers and local districts and better fiscal accounting procedures. Most coordinators were keenly aware of expenditure policies and guidelines that had been established during the previous fiscal year (FY1996). Some coordinators were feeling somewhat "disjointed" in they were unsure to whom they were accountable among CFC liaisons, school administrators, teachers, and central office supervisors.

Many centers' vision for the program have included accessing outside resources to couple with existing resources to broaden program goals. These include Americorp mini-grants, technology grants, after-school, and school-age child care programs.

Evaluation studies of the FRYSC programs as compiled by Ilbeck and Kalafat, consultants to the program, concluded, "FRYSCs provide cost-efficient, responsive, accessible services to families and schools." They go on to conclude services are provided in a manner that generally empowers families to address their ongoing needs by teaching about available school and community resources (and strategies for accessing them) and by increasing family self-efficacy (with some exceptions). Results further indicate the majority of centers visited are organized to "bridge

barriers" for families. Coordinators are generally well-connected in their community and, for the most part, serve as brokers who bring community services to schools.

OEA monitoring visits to centers and schools would further validate they are effective in bringing families into schools and acquainting parents with school environments and staff. The overwhelming majority of school principals interviewed claim FRYSCs provide an essential service to schools in bridging the barriers families encounter at all levels, thus enhancing students' abilities to succeed in school. However, the degree to which these services impact psychological, social, and economic barriers to children's readiness to learn needs to be more clearly established through further study.

Ilbeck and Kalafat also administered pre- and post-intervention surveys to teachers in schools where FRYSCs were located and asked teachers to rate student performance on a number of dimensions. The average duration for students receiving these evaluations were 228 days.

Table 17 portrays change for groups of global educational outcome variables. For each, the number of valid pairs compared (both pre- and post-intervention scores available) as well as the t-value, level of statistical significance, and an indication of the direction of change (improved, no change, deterioration) is provided. Positive and negative valence of t-values should be ignored; interpretation depends on how the question was worded and how the analysis was performed. T-values do, however, provide some indication of the magnitude of change over time; higher values indicate greater significance. The criterion used to assess whether a change is significant is the .01 level, a fairly stringent statistical test. It can be seen that significant change is noted for a number of variables, as summarized below:

- Teacher judgments show a decrease in perceived **school attendance** for the adolescent group, with no overall changes noted for the younger group.
- In developmental performance (**school achievement**), improvement is seen for elementary-age students, but no overall change seen for secondary students.
- For **academic proficiency** (KIRIS levels: novice, apprentice, proficient, distinguished), positive change is noted within the younger group, but not for adolescents.
- Significant changes *are not seen* for either group in regard to **grades**.

**TABLE 17**

\*\*Source: Evaluation Studies of FRYSC; Ilbeck and Kalafat

**Summary.** Overall, FRYSCs are one of the more popular of the Kentucky Education Reform Act initiatives from the perspective of teachers, principals, parents, and policy makers. CFC administration should exercise care to allow FRYSCs to operate as a program to foster

educational outcomes at the school level and not become overburdened with CFC's role in implementing the federal welfare reform initiatives.

FRYSC administrators should continue to find ways to document progress being facilitated by center intervention with families. The current methods for documenting the progress of students and families simply are not sufficient to justify continued funding, albeit most policy makers are very fond of what the program is accomplishing, at least in perception.

### **Recommendations**

1. The Cabinet for Families and Children should continue to make coordinators aware that this is an **educational program**, and all activities by the center should be focused toward an outcome that will improve students' chances to be successful in school.
2. The Cabinet for Families and Children should be cautious in using center coordinators and regional liaisons to supplant the work of their staff in implementation of federal welfare reform initiative requirements.
3. The Cabinet for Families and Children should carefully review staffing patterns of centers to ensure an excessive portion of the grant is not utilized to pay excessive staffing costs that may not yield appropriate returns on investment.
4. The Office of Education Accountability recommends full funding of the family resource and youth services centers' program to cover all eligible schools as per the Kentucky Department of Education appropriation request for the 1999-2000 biennium.

## MULTICULTURAL EDUCATION

**Overview.** The Kentucky Department of Education (KDE), through its Multicultural Opportunities Branch in the Division of Professional Development, has provided technical assistance to schools and school districts in the areas of multicultural education, equity, and diversity. Over the past two years, it has accomplished the following preparatory tasks: (1) sponsored a statewide conference that brought educators, students, and community members together to discuss and learn about issues in school equity, diversity, and multicultural education; (2) published a newsletter highlighting resources and promising practices and research disseminated to all schools throughout the state; (3) developed two training modules to address professional development at the orientation/awareness and planning/application levels in the specialized area; and (4) initiated the establishment of 37 professional development and instructional models for multicultural education in the schools and/or districts through mini-grants, monitoring, and technical assistance.

A needs assessment instrument, developed by the Branch, was pretested during the spring of 1995 and distributed to school districts during 1996. The needs assessment was conducted in the summer of 1996 at five sites during a training session. The report on this needs assessment suggests the following:

- Resource materials/persons reflecting human differences.
- Professional development opportunities in the area of instructional strategies responsive to human differences.
- School/district support for multicultural education. Regardless of what is actually occurring at the school/district level, respondents do not perceive support regarding multicultural issues. They report a lack of knowledge regarding school/district long-range plans pertaining to multicultural education.

A data gathering instrument focusing on anti-racist education, developed and copyrighted by Dr. Karen Donaldson of Iowa State University, was made available to school districts. The use of this instrument in the Todd County Schools concluded with a community-wide meeting in May 1997. This meeting led to a planning retreat involving school and community officials and officials from another county. This session produced a community plan to help deal with these needs.

The Task Force on Equity has produced a set of standards and indicators for local school districts to measure leadership support, curriculum and instruction, educational access and participation, school and classroom climate, family involvement and community outreach, employment, professional development, and student leadership. The Task Force also produced standards and indicators for KDE in the following areas: leadership support, curriculum and instruction, educational access and participation, KDE climate, involvement and community outreach, employment, and professional development. KDE staff is currently working on an instrument for assessment. This is expected to be ready in the spring of 1998.

The Branch expanded communication with schools and the public with their "Tapestry" newsletter. Published quarterly, it provides information on events and initiatives that support culturally-sensitive materials and strategies.

The Branch sponsored the annual statewide equity conference, "Tapestry, Weaving the Threads of Unity and Diversity Through Collaborative Empowerment," in September 1996. The conference featured nationally recognized speakers and provided 80 plus mini-sessions spanning a wide range of topics. KDE decided not to sponsor the conference in 1997.

The Branch's newest initiative is the Equitable Schools Program for local school districts. The program seeks to build capacity at the local educational level (districts and schools) to ensure equitable, high-quality educational services for all students regardless of differences in socio-economic status, gender, race, ethnicity, national origin, learning style, and ability.

KDE seeks to establish networks/teams of educators, parents, and students to address equity and diversity issues in schools. The primary focus of this change initiative involves the consolidated planning process which undergirds all program planning and implementation at the local (district and school) level. This team will address equity and diversity issues through the schools consolidated plan. This will create a forum that will support changes in the way school leadership initiates and supports policies and decisions for equity. Ultimately, it will impact the way teachers teach and students learn in school.

This is an ongoing (minimum of two years) professional development program. Nineteen teams from regions 1-7 were selected from an application process. Each team was paired with a member(s) of the Kentucky State Chapter of the National Association for Multicultural Education (NAME). The first session for these teams was in May 1997. The teams within regions are to

collaborate with a report due in June 1998. The teams include professional school staff members, community members, students, parents, and college partners.

The Student Ambassadors Program is an initiative to increase awareness including student diversity and equity clubs that train students in peer mediation, conflict resolution, sensitivity training, and cultural appreciation. The students act as ambassadors within their schools and participate in regional cultural exchanges between schools throughout the state. The students in three clubs (Paul Blazer High School, Berea Community High School, and Central High School of Louisville) have been the featured speakers at the National Committee for School Desegregation Conference. Three additional clubs (Lexington Henry Clay, Christian County, and Paducah Tilghman) have been formed and will become a part of these activities in the 1997-98 school year. The schools also work with middle and elementary school students on planned activities that explore bias, perceptions, and cultural appreciation.

### **Recommendations**

Since Kentucky has such a diverse population from east to west, it would seem appropriate to begin a faculty exchange program from district to district. This could be patterned after the Student Ambassadors Program referenced above. As mobility increases, with persons moving from location to location to secure employment, this would allow teachers to help students new to their area feel comfortable.

## PRESCHOOL PROGRAM

**Overview.** KRS 157.3175 requires school districts to provide a half-day, developmentally appropriate, preschool program for four-year-old children considered at risk of educational failure. Children who are at risk shall be identified based on the Federal School Lunch program eligibility criteria for free lunch. Preschool programs are comprehensive early childhood educational delivery systems, providing developmentally appropriate practices to children; integrated services to families; and interdisciplinary and interagency collaboration among organizations serving young children in Kentucky.

Collaboration has continually increased among school districts, Head Start programs, and other public and private providers maximizing services to children and families. In a few areas of the state, private providers have complained the free public school programs have hurt their business. School districts express concern about the lack of accountability for quality and services from some private providers. The issues surrounding quality and accountability standards for preschools remain a statewide and nationwide problem, especially in light of mandated welfare reform programs. Parents, teachers, and other stakeholders continue to praise the Kentucky Education Reform Act preschool program as an essential component of the reform movement. However, short of increased funding to cover the full cost of the program, districts may be required to scale back some critical elements of the program.

Since 1992, the University of Kentucky (UK) has been involved in an annual study of the program and a longitudinal review of a sample of 1990-91 and subsequent participants through primary school. In both cases, the conclusions are participants in the program continue to perform at about the same level as the comparison group who may or may not have had a preschool education experience. The major findings from the most recent round of analyses are found in the Executive Summary found in Attachment D (Appendix B). These data make a compelling case for full continued funding of the preschool program.

**Implementation.** From 1993-94 through 1995-96, the state preschool allotment was \$37 million each year. In 1996-98, there was a 3 percent increase each year of the biennium to \$38.1 million and \$39.2 million respectively. However, since 1992-93 the state preschool budget has lacked sufficient funds to cover the number of eligible children served.

*Per-Child Rates Reduced.* From 1993-95, the preschool per-child rates were reduced below the 1992-93 rates, and then reduced more in 1996-97 to a level below the 1990-91 rates.

*Capped Growth Funds.* Despite limited per-child rates, additional strategies were required to avoid exceeding the state allotment. From 1994-97, districts received minimal growth funds to cover any increases for additional eligible children served during the year, although districts are required to make services available to these children.

*Annual Shortfalls.* Over the last three years, the annual shortfall in growth funds for eligible children served was \$2.1 million in 1994-95, \$2.7 million in 1995-96, and \$2 million in 1996-97, all at rates already reduced. Although the 1996 budget bill allowed for reassignment of funds to preschool from SEEK after all SEEK calculations had been made, there were no available funds for this transfer to preschool in 1996-97.

Preschool Attachment A (Appendix B) shows a district printout with the following information for 1996-97:

- Adjusted Tentative: tentative award for 1996-97, confirmed at the beginning of the school year based on the previous year's enrollment (\$37.5 million at reduced rates.)
- Eligible Growth: the amount of additional funds the district was eligible for based on enrollment growth of more than 5 percent in 1996-97 over the previous year (\$2.2 million at reduced rates.)
- Eligible Award: the total award the district was eligible for in 1996-97 if funds had been available (\$39.7 million at reduced rates.)
- Total Final Disbursement with Prorata: the total amount actually awarded with reduced rates and limited growth (\$37.7 million.)
- Cost of Prorata: shortfall; funds the district was eligible for but did not receive (\$2 million).
- (96-97NEG Adjustment) Enrollment Decrease 1997-98 Deduct: negative adjustment; offset to be deducted in 1997-98 for districts where enrollment decreased by more than 5 percent from 1995-96 to 1996-97.
- Transportation Component: the portion of the preschool award which is included as a transportation add-on, at the reduced rate of \$246 per child (\$4.2 million). Since this amount is included in the preschool grant, this amount is consequently deducted from the general transportation calculation for the district, handled by the Division of Pupil Transportation.

- **Other Contributions:** Local contributions, the district's estimate of the amount of local and general funds contributed to the operation of the preschool program (at least \$10.1 million of additional funds, beyond the state preschool funds). This is an average of \$624 per state-funded child, or about 21 percent of the real cost of operating the program. The size and extent of this local contribution is part of the real cost of the program and demonstrates the extensive local commitment to the program.

Preschool Attachment B (Appendix B) provides a summary of the Preschool Per-Child Allocation from 1992-93 through 1997-98. While there is a small increase in the 1997-98 per-child rates over 1996-97, this increase is not large enough to bring the rates back up to the 1992-93 rates and growth funds are still capped. The shortfall of funds since 1993 is having a cumulative effect on staffing patterns and services.

- **Materials:** Instructional items, toys, and materials purchased over five years ago need to be replaced.
- **Classrooms:** School districts experiencing population growth receive no start-up to equip additional classrooms and receive minimal growth funds although they must add teachers and staff.
- **Teachers:** When additional teachers have been needed, districts have been more likely to add classified early childhood paraprofessionals rather than certified teachers due to limited funds, not lack of certified personnel. Classified paraprofessionals now make up 42 percent of all preschool lead teachers, up from 35 percent in past years.

As discussed in the next section, there is potential for significant enrollment increases in 1997-98 and beyond, due to welfare reform.

*Number of Students Served by Number of Districts.* State-Funded Enrollment: Preschool Attachment C (Appendix B) is the December 1, 1996 Kentucky Preschool Enrollment Count by school district. The first five columns of the printout include a breakout of the groups used in the weighted formula for preschool. Other columns provide additional information on enrollment statistics. Figure 5 is a summary of the 1996-97 printout with data from two years ago in italics for comparison purposes (1994-95).

**FIGURE 5**

**STATE-FUNDED ENROLLMENT**

12-1-96 STATE PRESCHOOL COUNT: TOTAL	15,508 children (14,901)
At-Rise 4's without disabilities:	7674 children (7827)
Disabled 3- and 4-year-olds:	7834 children (7074)
Speech/language:	3645 (3,431)
Developmental delay:	3816 (3,267)
Severe disabilities:	373 (376)
Disabled 3's Entering After 12-1-96:	747 children (514)
TOTAL 4's served who are free lunch eligible (12-1-96):	10,582 at-risk 4's (10,616)
Without disabilities:	7674 (7827)
With disabilities:	2908 (2789)

Table 18 shows the patterns and trends in state-funded enrollment over the last three years.

**TABLE 18**

**ENROLLMENT TRENDS FOR STATE-FUNDED CHILDREN**

Year	Total State Funded Children	State Preschool Count 12-1	At-Risk 4's without disabilities	Disabled 3- and 4-year-olds	Disabled 3's entering after 12-1	Speech/language	Developmental delay	Severe Disabilities
FY95	15,415	14,901	7827	7074	514	3431	3267	376
FY96	16,018	15,348	7676	7672	670	3661	3631	375
FY97	16,255	15,508	7674	7834	747	3645	3816	373

Trends. The printout and table reflect the following trends regarding the state-funded children:

- There has been net continuous growth in enrollment statewide, with more than half of the districts experiencing growth in enrollment of more than 5 percent each year, despite the budget shortfall and limited funds available for growth.
- State-funded enrollment of income-eligible four-year-old children leveled off between 1994-97. As discussed later, this trend is expected to change in 1997-98, with enrollment increases in this group projected.

- Of the income-eligible children served in state-funded programs, there is a decreasing number and percentage who do not also have delays or disabilities.
- There is an increasing number and percentage of three-year-old children served in the state-funded program, all of whom have disabilities (22 percent). This reflects the increase in services to infants and toddlers with disabilities operated through First Steps, Kentucky's early intervention system administered by the Cabinet for Health Services.
- The main growth in state-funded children in the last three years has been in the number of children with disabilities, specifically developmental delays. The statewide evaluation of the program by UK verifies appropriate identification of preschool children generally. UK data also show on entry into preschool, the average developmental scores of children in each eligible group (at-risk, speech, developmental delay) have been lower each year. In short, there are more children with delays, and the delays they show as they enter the program are greater.
- Overall, an increasing number and percentage of the children served through state funds have disabilities (53 percent).

*Additional Children.* On December 1, 1996, school districts served 2355 additional children who were not eligible for state preschool, PACE, or Head Start funding (Table 19). This reflects the state requirement to serve other four-year-old children as placements are available. The major public concern about the state-funded preschool program is it is not available to all four-year old children. Sources districts use to support these other children include: general funds, local funds, parent fees (tuition), Title I, corporate foundation, or other donations; and any other sources besides state preschool, PACE, or federal Head Start funds. Over the last several years, there has been an increase in services to additional children. In 1996-97 this trend reversed, probably due to the impact of the preschool budget shortfall and subsequent overall limits in local resources to make placements available.

**TABLE 19****ENROLLMENT OF OTHER CHILDREN**

Year	Number Of Other 4s	Percentage of Enrollment	Number of Districts Involved	Percentage of Districts Involved
1993-94	1337	10%	52	30%
1994-95	2453	16%	68	39%
1995-96	2531	16%	71	40%
1996-97	2355	15%	60	34%

*Head Start enrollment (federal funds).* Services to state-eligible children are provided by a partnership between state and Head Start funds. State-funded and Head Start enrollment data must be reviewed together in order to determine trends and project future enrollment. Although both state funds and Head Start serve income-eligible children and children with disabilities, state funds increasingly serve a much higher number and percentage of the children who are eligible due to disabilities. Figure 6 and Table 20 reflect in 1996-97:

**FIGURE 6****STATE AND HEAD START PARTNERSHIP**

Head Start funded approximately 35 percent of all the state-eligible children served, 42 percent of the at-risk four-year-old children served, and 18 percent of the disabled three- and four-year-old children served.

State preschool funded approximately 65 percent of all the state-eligible children served, 58 percent of the at-risk four-year-old children served, and 82 percent of the disabled three- and four-year-old children served.

**TABLE 20****STATE AND FEDERAL SERVICES**

	State Eligible Children Served	At-Risk Four-Year-Olds Served	Disabled Three- and Four-Year-Olds Served
<b>State</b>	<b>65%</b>	<b>58%</b>	<b>82%</b>
<b>Head Start</b>	<b>35%</b>	<b>42%</b>	<b>18%</b>

Figure 7 indicates on December 1, 1996, Head Start programs provided an enrollment report by district, showing the number of children federally funded through Head Start (*1994-95 data in italics*):

**FIGURE 7**

**HEAD START FUNDED ENROLLMENT**

<b>TOTAL HEAD START ENROLLMENT (12-1-96):</b>	<b>13,390 children</b> ( <i>13,212</i> )
<b>State eligible/Head Start funded:</b>	<b>9855 children</b> ( <i>9227</i> )
<b>Funded only by Head Start:</b>	<b>8524 children</b> ( <i>8335</i> )
<b>Funded by state with Head Start supplement ("KERA enhanced"):</b>	<b>1331 children</b> ( <i>892</i> )
<b>Others not eligible for state:</b>	<b>3535 children</b> ( <i>3985</i> )

Table 21 indicates children eligible for the Kentucky Preschool Program who are enrolled and funded by Head Start:

**TABLE 21**

**NUMBER OF STATE-ELIGIBLE CHILDREN  
FEDERALLY FUNDED THROUGH HEAD START**

<b>Years</b>	<b>Total Head Start Enrollment</b>	<b>State Eligible/Head Start funded</b>	<b>State Eligible/funded only by Head Start</b>	<b>Already funded by State with Head Start supplement</b>	<b>Others not State Eligible</b>
<b>FY95</b>	<b>13,222</b>	<b>9227</b>	<b>8335</b>	<b>892</b>	<b>3985</b>
<b>FY96</b>	<b>13,330</b>	<b>9639</b>	<b>8557</b>	<b>1082</b>	<b>3691</b>

**AT-RISK FOUR'S AND DISABLED THREE'S-FOUR'S  
ENROLLED IN HEAD START**

INCOME ELIGIBLE FOUR-YEAR-OLDS:		9004 Four-year-olds (8597)
Without disabilities	7671 (7165)	
With disabilities	1433 (1432)	
Funded only by Head Start (approximately same as 1989)		7773 (7705)
State funded/with Head Start supplement: ("KERA Enhanced")		1331 (892)
THREE'S-FOUR'S WITH DISABILITIES (17% OF ENROLLMENT)		2,200 with disabilities (2062)
Four-year-olds (includes enhanced):	1553 (1432)	
Three-year-olds:	647 (627)	

**TABLE 22**

**AT-RISK FOUR'S ENROLLED AND FUNDED BY HEAD START**

Year	Four's funded only by Head Start	Four's State Funded and Receiving Head Start Supplement	At-risk Four's with disabilities
FY95	7705	892	1432
FY96	7789	1089	1447
FY97	7773	1331	1433

Figure 8 and Table 22 reflect the following trends in Head Start enrollment, relative to the state-funded program:

- The number of state-eligible children who are four-year-olds, at-risk, and served totally through Head Start funds has held constant over the last seven years at a level only slightly higher than in 1989.
- In the last few years, Head Start's actual enrollment increased by less than 200 children, continuing a trend of marginal growth since 1993-94. However, there have been changes in which types of children are served within that overall total.
- After 1990, there had been an increase in Head Start enrollment of three-year-olds without disabilities. However, this trend reversed in 1995-96, and the decrease is continuing.
- In the last two years, shifts in Head Start enrollment patterns resulted in enrolling more income-eligible four-year-olds without disabilities. However, Head Start served these four-year-olds by providing more intense supplemental services ("enhancement") to

children already enrolled in the state-funded program, rather than serving additional unserved children: i.e., the children were unserved by Head Start, but were already receiving state preschool services.

- Generally, increases in federal Head Start funds over the last several years have resulted in more intensive services and other program improvements for children and families already served, rather than services to more unserved children in Kentucky. In part, this reflects Head Start initiatives toward full-day, full-year programs and welfare-to-work and/or collaborative efforts with school districts to counterbalance state preschool budget limitations for children eligible for both programs.

*Projected Changes for 1997-98 and Beyond.* There is strong potential for an increase in enrollment of at-risk four-year-olds in the state-funded program beginning in 1997-98 due to factors affecting parental choice in enrolling children. At present, there are no waiting lists in school districts or Head Start for at-risk four-year-olds. However, there are approximately 5000 to 6000 income-eligible four-year-old children not presently enrolled in state-funded preschool or Head Start because the parent has chosen not to seek enrollment. The following are two main reasons given by parents for this choice and the possible impact of welfare reform initiatives on those choices in the future:

1. The parent is out of work and wants the child home with her/him. Welfare reform initiatives may require these parents to go to work, leading to an increased demand for preschool as well as a demand for longer hours and more days.
2. The parent has the child enrolled in some other child care program which has been subsidized by federal child care funds through the Cabinet for Families and Children. The new state child care plan in support of Kentucky welfare reform does not allow parents to receive child care subsidy where public preschool or Head Start is available and accessible. This policy is likely to lead to an increased demand for preschool for eligible children as well as a demand for longer hours and more days.

At the federal level, Head Start is scheduled for expansion through competitive grants. While Kentucky will generally benefit from this expansion, there is no mechanism in the federal Head Start grant process for state input on locations of resource gaps or priority areas of need within a state. As in the past, these expansion grants may not be awarded to serve locations where Kentucky population growth spurts have occurred or where there is not already a significant level of services.

Categories of Services. All children served through Kentucky Preschool funds received the following services outlined in state preschool regulations (*1994-95 data in italics*):

1. A half-day developmentally appropriate educational program. Out of the 1473 sessions serving state-funded preschool children (*1336*): 57 percent (*85 percent*) were half-day preschool education programs (3 to 3.5 hours), 11 percent (*11 percent*) provided an educational program between 4-6 hours, and 32 percent (*11 percent*) were full-school-day education programs (6 hours or more.) Changes reflect a trend toward six-hour programs with approximately one-third of the sessions operating for a full school day.
2. At least one meal and appropriate nutrition information as part of the curriculum. All children received at least one meal, generally with an additional snack. Many of the children (*60 percent [53 percent]*) received two meals, generally in sessions over three hours.
3. Complementary parent education with a minimum of two home visits and opportunities for other involvement: 54 percent (*47 percent*) of the children had a parent who volunteered in the classroom, 51 percent (*46 percent*) of the children had a parent who participated in other types of parent education services in addition to the minimum home visits. Changes reflect an emphasis on parent involvement.
4. Health screening (hearing, vision, growth, and general health immunizations) and appropriate health information as part of the curriculum: 99 percent (*95 percent*) of participants were immunized, 98 percent (*95 percent*) received health screening/entry physical exam, 99 percent (*95 percent*) received hearing screening, and 99 percent (*95 percent*) received vision screening. Changes reflect an improved enrollment process and a focus on reducing physical barriers to learning.
5. Developmental screening (cognitive, communication, adaptive, motor, and social-emotional skills): 8.9 percent (*8.2 percent*) of all Kentucky three- and four-year-olds were screened, evaluated, and provided special education services through state or Head Start; and 3491 (*4799*) other community children were screened and showed no significant delays and were not enrolled in public preschool or Head Start. Changes reflect a strong special needs component, one of the strongest in the country. With the growth in the First Steps (infant/toddler) program for younger children with disabilities administered through the

Cabinet for Health Services, more children are served before age three through First Steps, rather than found with delays through general community screening at age three.

6. Coordination with medical, health, mental health, and social services agencies to meet the comprehensive needs of children: 89 percent (*85 percent*) of those needing follow up to health screen/physical exam received this service, 91 percent (*79 percent*) of those needing hearing screening follow up received this service, and 78 percent (*67 percent*) of those needing vision screening follow up received this service.

All data were compiled from the 1996-97 and 1997-98 Kentucky Preschool Proposals.

Number of Contracted, Blended and Direct Provider Programs.

- Number of Contracted Programs. "Contract" means state preschool funds were paid to another agency for educational placement of one or more state-funded preschool children: i.e., transfer of state funds (Figure 9 [*1994-95 data in italics*]):

**FIGURE 9**

**CONTRACTED PROGRAMS**

Outside agency operates the total program:	37 school districts	(21%)(33/19%)
Combination contract and direct provision:	<u>19 school districts contracting</u>	<u>(11%)(19/16%)</u>
	56 school districts contracting	(32%)(62/35%)

Most contracting continues to be with Head Start and not-for-profit child development centers. While contracting appears slightly down since 1994-95 (by 3 percent), contracting in 1994-95 had been up 9 percent over 1993-94. Further, there are several more contracts this year for the whole program. This suggests annual fluctuations on fiscal relations with Head Start and fewer contracts for individual children with disabilities.

- Number of Blended Programs. "Blended" means children under various funding sources are mixed in classrooms, with the following conditions noted in Figure 10:

**FIGURE 10**

**BLENDED PROGRAMS**

131 districts (75%) operate blended programs with one or more of the following source	(109/62%)
79 districts (45%) blend with Head Start funded programs	(86/49%)
45 districts (26%) blend with local district funds supporting additional children	(36/20%)
31 districts (18%) blend with district tuition/fee-based programs	(20/11%)
12 districts (7%) blend with district federal Title I programs	(7/4%)
11 out of the 35 classes with PACE blend with PACE (31%)	(10/28%)
19 districts (10%) blend with other fund sources (corporate, donation, etc.)	

In general, blending with Head Start and PACE is frequent and widespread and is increasing with local, tuition, and other fund sources. There appears to be a small shift from mixing state-funded and Head Start children in the same classrooms. This may reflect Head Start initiatives in Welfare reform for longer days and more intensive services, in combination with the impact of the state preschool shortfall: i.e., districts may not be able to contribute a fair share toward jointly operating a program where Head Start is expanding to more and more intensive services. (Average Head Start funds per child in Kentucky are over \$44,000, twice the state amount, and appear to be increasing as expansion funds are received.)

- Number of Direct Provider Programs. School districts have a wide variety of arrangements with Head Start, PACE, and other preschool education programs to operate the state-funded Kentucky Preschool Program. The result is only 37 districts (21 percent) operate separate classes serving only state-funded children (Figure 11 [*1994-95 data in italics*] and Figure 12):

**FIGURE 11**

**DIRECT DISTRICT OPERATIONS**

Programs Without Any Direct District Operation		39 districts(22%)	(35/20%)
Districts without any state-funded children:	2 (2)		
Districts with total program contracted:	37 (33)		
Programs with direct District Operation		37 districts(78%)	(141/80%)
Districts with some direct operation:	69 (73)		
Cost share arrangements (other than with local funds or tuition):	50 (44)		
Partial contracting:	19 (29)		
Districts with only direct operation:	68 (68)		
Only state, local, and tuition sources:	31		
Stand-alone with state-funded only:	37		

**FIGURE 12**

**COLLABORATIVE PROGRAMS**

Stand-alone (state only)	21 percent
No direct district operation (full contracts)	22 percent
Cost Share	28 percent
Blended with local or tuition	18 percent
Partially contracted	11 percent

Accreditation

- Number of Accredited Programs Recognized by the Kentucky Board of Education. A total of seven nonpublic school preschools and kindergartens have been recognized by the Kentucky Board of Education for their educational program: i.e., curriculum, materials, and teacher credentials (Figure 13). There are no applications pending as of August 15, 1997.

**FIGURE 13**

**PROGRAMS RECOGNIZED BY THE KENTUCKY BOARD OF EDUCATION**

Kentucky State University Rosenwald Center for Early Childhood Development (Frankfort)  
Jefferson Community College Early Childhood Child Development Center (Louisville)  
Centenary Early Childhood Center (Lexington)  
Ecumenical Preschool, Inc. (Lexington)  
Child Enrichment Center (Elizabethtown)  
West Kentucky Easter Seal Center (Paducah)  
PUSH Early Childhood Development Center (Frankfort)

- **Number of NAEYC Accredited Programs.** The National Academy of Early Childhood Programs, the program accreditation arm of the National Association for the Education of Young Children (NAEYC) reports 95 centers in Kentucky which hold current national accreditation (Figure 14). This is twice the number of centers (47) accredited three years ago. These accredited centers are associated with various types of programs, as identified below. Some of the programs have more than one building accredited, so the numbers below do not add up to 95. For example, 13 of the 95 centers accredited by NAEYC are state-funded preschool classrooms in different elementary schools in Fayette County, reported below as "1" school district accredited program.

**FIGURE 14**

**TYPES OF NAEYC ACCREDITED PROGRAMS**

School district Kentucky Preschool Programs:	12
State preschool/Head Start blended programs:	14
Other Head Start programs:	7
District or Head Start child care-funded programs:	3
University lab programs:	5
Military child development programs:	3
Private programs contracting with districts:	10
Other private programs:	14
Vocational (KY-TECH):	1

Most of the growth in accredited programs since last year has been in additional centers or buildings in the same school district or Head Start grantee.

*Transportation Overview.* Preschool Attachment A (Appendix B) includes the transportation add-on as it is calculated into the state preschool award by district. The transportation add-on comprises about 10 percent of the total state preschool allocation. This is based on a formula amount of \$246 per child, as reduced in 1996-97 from the 1992-95 add-on amount of \$260 per child. The amount of the preschool transportation add-on in the preschool grant is deducted in the school district's general transportation formula, as calculated by the Division of Pupil Transportation. The amount in Attachment A does not reflect actual cost.

Transportation is required as a related service if needed for a child with disabilities and is an optional service for at-risk four-year-olds. Only five districts do not offer this option to at-risk four-year-olds. This leaves only 64 at-risk children enrolled in those districts without this service available (Figure 15 [1994-95 data in italics]):

**FIGURE 15**

**PRESCHOOLS TRANSPORTED BY SCHOOL DISTRICTS**

Total State-Funded Preschool Enrollment (12-1-96):		15,508 children
Transportation not available:		64 children
State-funded children transported:	(up 609)	15,444 children
Other preschool children served in district 12-1-96 not funded through state, Head Start, PACE):		
		2355 children
Head Start funded children transported by districts (49 percent of Head Start enrollment) (46%):	(up 424)	6621 children
<b>TOTAL PRESCHOOL AGE CHILDREN TRANSPORTED BY DISTRICTS 24,420 CHILDREN</b>		

Head Start does not require programs to transport children nor to provide transportation to all children when transportation is provided to some. As part of the collaborative efforts to assure full utilization of Head Start, 50 percent of all school districts (88 out of 176) provide transportation for Head Start children. Based on local agreements, districts generally provide this service as reduced cost to the Head Start program, absorbing some of the actual cost of transportation through other sources. Since Head Start programs must have a match of

20 percent of funds from nonfederal sources in order to receive the federal Head Start funds, transportation is often used as a part of this match to generate the Head Start funds. There is a provision in state regulation allowing districts to receive state preschool funds for transporting Head Start children, if funds are available. The state preschool budget shortfall has prevented this possibility. Kentucky has had an excellent safety record in transporting preschool age children, both in the high standards for vehicles and the use of driver assistants (bus monitors) on each bus.

*Number of Full-Day Preschool Programs.* A full-day preschool education program is a six or more hour day with the teacher and instructional staff present. Table 23 provides details about the length of sessions for the daily educational component, compared to the previous years. The figures do not reflect where after-school child care may be available to extend the school day to address family work schedules.

**TABLE 23**

**LENGTH OF DAY FOR PRESCHOOL PROGRAMS**

	1996-97 (for 1997-98)	1995-96 (for 1996-97)	1994-95 (for 1995-96)
Total Number of Sessions	1473 sessions	1327 sessions	1336 sessions
Number of 3-Hour Sessions (State minimum length)	590 sessions (40%)	480 sessions (36%)	630 sessions (47%)
Number of 3.5 hour sessions: (Head Start minimum)	252 sessions (17%)	330 sessions (25%)	347 sessions (28%)
Number of 4-6 hour sessions	157 sessions (11%)	150 sessions (11%)	150 sessions (11%)
Number of 6 or more hour sessions	474 sessions (32%)	367 sessions (28%)	184 sessions (14%)

When looking at both 3 and 3.5 hour days as half-day programs, there is a clear shift from half-day sessions to full school day sessions. The internal shift from 3.5 hour days to 3 hour days may reflect minor changes in blending classrooms with Head Start (Head Start minimum school day is 3.5 hours; the state minimum school day is 3 hours). In 1997-98, one-third of all sessions for state-funded preschoolers were full school day programs (Table 24).

**TABLE 24**

**FULL DAY PRESCHOOL**

1995-96	1996-97	1997-98
Full Day 16%	Full Day 28%	Full Day 32%
4-6 Hours 12%	4-6 Hours 11%	4-6 Hours 11%
Half-Day 72%	Half-Day 61%	Half-Day 57%

*Number of Full-Day Kindergarten Programs.* Figure 16 illustrates information provided through the Primary Program Demographic Survey as of August 18, 1997 (724 out of 828 elementary schools reporting):

**FIGURE 16**

**LENGTH OF KINDERGARTEN SESSIONS**

<b>Total Number of Primary Classrooms:</b>	<b>8138</b>
<b>Total Number of Kindergarten Sessions:</b>	<b>2388</b>
<b>Full-Day Kindergarten Sessions: 1063 representing 13% of primary classrooms</b>	
<b>Half-Day Kindergarten Sessions: 1325 representing 8% of primary classrooms</b>	

**Recommendations**

The Office of Education Accountability, after careful consideration, recommends the preschool program be fully funded as per the Kentucky Department of Education budget request. Growth through increased enrollment each year has forced districts to absorb the extra costs of serving the children outside the categorical appropriation. Budget language adopted in House Bill 379 attempted to provide more funds through stipulation that 40 percent of surplus SEEK funds be awarded to districts providing these services on a prorata basis. However, as a result of SEEK funds being fully utilized in 1996-97, no surplus was available and districts were required to absorb the anticipated surplus with no remuneration.

**Overview.** With the passage of the reform act in 1990, public elementary schools in Kentucky dramatically changed the learning environment for children. Traditionally, Kentucky students in K-3 were grouped by age and often ability. This resulted in a 22 percent annual cumulative retention rate for those grades, meaning more than one out of every five children failed a grade before they reached the fourth grade. Common sense indicates with this many children stigmatized as "failures," many children are disenchanting with school.

Prior to the enactment of House Bill (HB) 940, research conducted on nongraded programs concluded that nongraded pupils fared better when compared to their peers in graded classrooms in the areas of academic achievement, mental health indicators, and overall improvement noted in a variety of at-risk populations.

The 1996 budget language reiterated changes made in 1994 to KRS 158.160(b) which allowed schools more flexibility in multi-age groupings. This language gave schools increased latitude in the design of their primary classrooms. While maintaining multi-age grouping is still required, the Kentucky Department of Education's (KDE) directive to schools is clear, "... organize instruction in ways that foster continuous progress. Flexible grouping and regrouping to meet individual student needs in a developmentally appropriate setting is best practice."

**Implementation.** The majority of schools visited by the Office of Education Accountability (OEA) during the 1996-97 and 1997-98 school years appeared to more clearly understand current requirements. OEA staff, while attending several task force hearings throughout the state in the fall of 1996, noted that some resistance still exists, largely attributed to misinformation as to what regulations require. Much of the criticism noted in the hearings centered around parents and teachers in upper primary (P-3 and P-4) complaining that primary programs did not provide basic skills attainment and lack of clarity regarding statutory requirements of multi-age grouping.

CTBS scores released in August 1997 indicated Kentucky schools in 1996-97 at the third grade (P-4) scored slightly below the national average at 49.7 percent with all students tested and slightly above the national average at 51.3 percent with students excluded who had 504 plans or IEPs. This affirmation that basic skills were not being abdicated, somewhat dissuaded critics who had previously made assertions that basic skills were being ignored in primary school curriculum. Correlation coefficient between KIRIS 96 and CTBS third grade in 17 districts visited by OEA

is .54. This indicates there is about a 30 percent overlap between these two measures of student testing. In other words, about 30 percent of the variance in KIRIS results in these districts can be accounted for in the CTBS results and vice versa.

KDE surveyed primary programs late in the 1996-97 school year in an attempt to collect key program data via a school mailing. Eighty-nine percent (714/803) of schools responded to the twelve-item checklist indicating their level of implementation of the critical attributes as well as other information regarding Kentucky Early Learning Profile (KELP) usage, school-based decision making (SBDM) involvement, and configuration map usage. This survey involved 7832 primary classrooms and 171,281 students. The average pupil/teacher ratio in this group was 21.86 to 1.

Of the 2437 classrooms with five-year-olds in this survey, 1116 (46 percent) offer full-day programs, while the others offer only half-day. HB 379 (the budget bill) at the end of the 1996 Regular Session, stipulated districts that offered a full-day entry-level program would receive 60 percent of surplus SEEK funds; however, none were available for distribution as a result of the 1996-97 enrollment.

The survey also revealed the most contentious aspect of primary school, **multi-age grouping**, is largely complied with as per the requirements of the statute and regulations. Six hundred thirty-nine (89 percent) of the 714 schools reporting claimed multi-age grouping was the predominant mode of grouping students for instruction. OEA findings in visits to 17 districts revealed only two districts were single-age grouping for instruction part of the day; however, most were dual-age grouping for the remainder of the time, as opposed to triple-age.

According to KDE survey data from the 714 schools, only 4,271 of 171,281 (2 percent) students spent a fifth year in primary. However, other KDE grade enrollment data file (SD-125R) for the fall 1996 school year indicates about 20,000 more students were enrolled in Grade 3 (P-4), the last year of primary, than other younger and older cohorts.

#### FALL 1996 Grade Cohort Enrollment

Kindergarten	(P1)	45,881
1st grade	(P2)	48,125
2nd grade	(P3)	46,684
<b>3rd grade</b>	<b>(P4)</b>	<b>68,560</b>
4th grade		47,462

If the latter is the case, Kentucky is approaching a 20 percent retention rate in primary, close to the 22 percent cumulative retention rate (K-3) prevalent in the state prior to the enactment of HB 940.

Only 244 of the 714 schools report a written SBDM policy on the implementation of primary school. This is an indication that primary school councils are relying heavily on the principals to enact KDE/KBE policy directives in the area of primary implementation.

Data from the survey regarding the rank order implementation of the seven critical attributes from most to least is as follows:

- Developmentally Appropriate Practices
- Continuous Progress
- Multi-age/Multi-ability
- Professional Teamwork
- Qualitative Reporting
- Positive Parent Involvement
- Authentic Assessment

These data indicate more professional development funds should be directed toward authentic assessment and qualitative reporting, both of which would be fulfilled if schools would adopt more widespread usage of KERP. This will become more crucial as schools attempt to raise the level of fourth graders toward proficiency on KIRIS.

Methods and tools used in reporting student progress include the following (n=714):

- |                           |     |               |     |
|---------------------------|-----|---------------|-----|
| • Report Card             | 425 | • KERP        | 276 |
| • Anecdotal Records/notes | 538 | • Conferences | 656 |
| • Reporting document      | 377 | • Other       | 82  |

This indicates, on average, that schools are using at least three methods or tools when reporting to parents. Short of analyzing each of these to determine the level of qualitative reporting required by statute and regulation, OEA found most schools are using an appropriate blend of narrative and skills-based reporting.

OEA Research. OEA staff conducted monitoring visits in 17 school districts during the 1996-97 school year. The purpose of these visits was to determine whether or not the Kentucky Education Reform Act initiatives were being implemented as per the letter and spirit of the statute. In the

case of primary school reviews, staff interviewed instructional supervisors, principals, and teachers in each school to make those determinations, as well as conducting classroom observations.

A total of 74 classroom observations were conducted in elementary schools. The observations lasted for a period of 30-45 minutes, including an interview with the teacher. The observation instrument did not attempt to make a determination about whether primary school was being implemented as per the critical attributes, but rather attempted to evaluate whether or not the lesson was being taught in the modality of "activity-based learning" and KERA/KIRIS-like practices. The following 20-item checklist was used for the observer to complete:

1.	Is the content focus directly related to at least one of Kentucky's Learning Goals?	99%	Yes
2.	Is there evidence that the lesson is directly related to at least one Academic Expectation?	99%	Yes
3.	Is the lesson text book driven?	15%	Yes
4.	Are the instructional strategies designed to elicit interactive student participation?	82%	Yes
5.	Does the lesson involve the use of a computer?	27%	Yes
6.	Does the lesson require the use of other technology?	19%	Yes
7.	Did the lesson involve writing through either open-response items, portfolios, or on-demand writing?	69%	Yes
8.	Was there evidence of integration of subject matter?	88%	Yes
9.	Was there any evidence of authentic assessment (teachers evaluating students within the context of daily activities and documenting strengths and weaknesses)?	68%	Yes
10.	Are the students aware of expected levels of performance through rubrics or standards?	74%	Yes
11.	Is the lesson plan rich in content as well as engaging, requiring higher-level thinking and problem-solving?	78%	Yes

12.	Is the lesson developmentally appropriate for the age of the students? (At the elementary level)	99%	Yes
13.	Is the role of the teacher one of a facilitator that invites interaction by motivating, challenging, encouraging, inviting reflection, and giving feedback	91%	Yes
14.	Was there evidence of cooperative learning?	62%	Yes
15.	Was there evidence of usage of <u>TRANSFORMATIONS--KY's Curriculum Frameworks?</u>	54%	Yes
16.	Was there evidence of usage of <u>CORE CONTENT?</u>	65%	Yes
17.	Is there evidence of multiple-choice test usage?	4%	Yes
18.	Could the classroom be categorized as one which espouses performance assessment as required by KIRIS?	78%	Yes
19.	Is there any evidence of "curriculum narrowing" to accommodate a certain grade's test preparation?	11%	Yes
20.	Was there evaluation and reflection on the skills or concepts covered?	74%	Yes

Limitations of this research include:

- Advance notice was given to these schools that a visit could be expected by OEA on or about the day on which the observation was made.
- These data reflect observations made in K-5 elementary schools, which included all grades.
- This observation form does not attempt to measure multi-age/multi-ability grouping and positive parental involvement, two of the seven critical attributes; however, these were surveyed during interviews with principals and teachers.

Evidence from observations in these 74 classrooms indicate many schools are making the transition to an activity-based modality of instruction which is necessary to meet statutory requirements of KRS 158.160(b). Thematic units of instruction and family groupings were also prevalent.

KDE's survey data validates OEA's observation data placing an area of concern related to the implementation of authentic assessment. KDE's data places this priority near the bottom of

schools' implementation priority list and OEA observations conclude this was occurring in 68 percent of the cases. This represents an area of concern for OEA, since it has asserted for several years in its annual report that KDE should take a stronger position in this area and encourage more widespread use of KERP.

KERP, the chronological reporting document developed by Advanced Systems at a cost of over \$200,000, was only mandated for use by the district in 268 schools according to KDE's survey. Current KDE policy dictates schools administer KERP or a KERP-like document of authentic assessment/continuous progress. This is problematic since there is no systematic method of evaluating the worthiness of KERP-like documentation. It is apparent from survey data by KDE and OEA's classroom observations and teacher interviews, this is the area needing the most improvement.

This is the only complete, fourth grade KIRIS-like methodology for chronologically assessing student progress from P-1 through P-4 (kindergarten-third grade). Schools who do not embark on a performance-type assessment measure in the early grades face a greater challenge when these students are exposed to the rigors of fourth grade KIRIS.

TABLE 25

DISTRICTS MONITORED KIRIS, SCHOOL EFFICIENCY INDEX,  
AND THIRD GRADE CTBS SCORES

KIRIS96	KIRIS96 PREDICTED ADJUSTED W/ REGRESSION	SCHOOL EFFICIENCY INDEX RATING	THIRD GRADE DISTRICT CTBS TOTAL BATTERY
44.8	46.35	-1.55	52.3
44.7	46.80	-2.10	57.3
50.1	47.75	2.35	53.1
47.8	44.89	2.91	56.9
51.8	48.20	3.60	55.3
47.7	50.32	-2.62	52.1
45.4	47.84	-2.44	46.8
43.6	42.54	1.06	52.8
40.7	42.45	-1.75	45.5
41.6	42.13	-0.53	46.3
46.3	42.10	4.20	58.8
54.3	53.18	1.12	60.1
43.1	42.50	0.60	49.0
46.5	47.29	-0.79	47.9
44.4	44.20	-0.20	52.8
53.6	50.53	3.07	50.4
44.6	43.44	1.16	46.2

Correlations

	<i>Column 1</i>	<i>Column 2</i>	<i>Column 3</i>	<i>Column 4</i>
Column 1	1			
Column 2	0.82993545	1		
Column 3	0.51695561	-0.048494703	1	
Column 4	0.53900521	0.338014061	0.446397	1

The correlation coefficient between KIRIS96 district accountability index and CTBS/5 district third grade mean score is positive .54. If KIRIS and CTBS were purporting to be measuring the same skills, these correlations would be less than desirable; however, CTBS reportedly measures

content/knowledge while KIRIS reportedly measures process/application. It is generally assumed students must possess strong basic skills in the content/knowledge domain in order to perform well on KIRIS.

## **Summary**

KDE's survey data and OEA's qualitative reviews clearly corroborate each other in proffering the need to emphasize more use of authentic assessment and continuous progress strategies. Since there is no mandated process by which teachers determine if students have successfully completed the primary program, KDE/KBE should consider enacting a regulation that would bring uniformity to the criteria for exiting primary students to fourth grade. KBE enacted an "interim" regulation in December 1992 to serve as a guide for schools to make exit decisions about students. This regulation contained 18 specific criteria that students must exemplify before promotion should be granted. However, the "interim" continues five years later with no plans to revise the regulation to adopt KERP or any other official "gateway" skills document to determine successful completion of primary school.

KERP was designed by ASME to support appropriate curriculum and instruction, verify successful completion of the primary program, communicate with parents, and provide a document for implementing authentic assessment. It provides the schools with a KIRIS-like assessment program that emphasizes process/application and a continuum of skills measured by accompanying learning descriptions. Short of some uniform methodology controlled by the KBE/KDE regulatory process, disparity could continue to exacerbate between primary curriculum and fourth grade KIRIS assessment. Although 438 of 534 (82 percent) elementary schools who reached reward category in cycle two are fourth grade schools, the "concrete wall" is fast approaching for many unless the authentic assessment attribute is given more attention.

Mandating a uniform assessment for successful completion of primary school would accomplish consistency in curriculum on a statewide basis. It would also provide an excellent medium for accomplishing full implementation of continuous progress, authentic assessment, qualitative reporting, and positive parental involvement, four of the seven critical attributes in statute and regulation.

OEA remains concerned about the uncertainty of retention rates in primary schools. Recently KDE has undertaken a more diligent approach in arriving at these calculations which should improve the clarity of how many students are being retained. OEA visited a district in the fall of 1997 whereby the retention rate was 50 percent at the end of primary.

### **Recommendations**

1. The Kentucky Department of Education and the Kentucky Board of Education should consider requiring the use of KELP for all primary schools to ensure uniformity and continuity of curriculum, outcome expectations, and exit criteria.
2. The Kentucky General Assembly should consider permanently enacting into statute the language used in House Bill 379 to offer primary schools more latitude in making decisions regarding the level of multi-age grouping on a student-by-student basis.
3. The Kentucky General Assembly should offer more incentives in funding full-day kindergarten. An attempt was made in the current biennium budget bill to apportion a percentage of excess SEEK funds to districts that offered full-day kindergarten; however, due to no surplus being available, districts absorbed the funds locally.
4. The Kentucky Department of Education regional service center primary staff should more diligently monitor implementation practices of primary schools to ensure districts are not ignoring statutory and regulatory requirements. Although it is generally accepted that KIRIS is the measuring stick for schools, it is apparent some schools are ignoring major portions of the critical attributes and yet remaining successful vis-à-vis KIRIS.

## PROFESSIONAL DEVELOPMENT

**Overview.** Professional development continues to be the key to education reform. Opportunities for relearning and acquiring new skills are critical to changing education in Kentucky. The 34,000 teaching professionals continue to seek professional activities that will keep them prepared for today's classrooms. In addition, approximately 3000 (10 percent of the teaching force) new teachers enter the workforce each year and must receive appropriate professional development. The 1996 Regular Session of the General Assembly continued the appropriation for professional development at \$23 per student in average daily attendance for each year of the biennium. However, there was no renewal of the five instructional days for professional development that had been granted in the preceding four years. KRS 158.070 was amended to allow school calendars to be revised, but they must contain the equivalent of 175 six-hour days (1050 hours). Districts may now reconfigure their allotment of the minimum 1050 instructional hours to meet their needs.

Legislation requiring school districts' membership in a consortia has expired. However, most school districts now belong to a cooperative which assists or provides needed professional development. These cooperatives also broker a variety of other services to their member districts.

A sample of school and district professional development plans was reviewed by the Office of Education Accountability (OEA) staff. These plans reflect more focused professional development activities and fewer one-day seminars. The activities continue to reflect reform-related issues such as technology (operational and instructional), portfolios, Kentucky Early Learning Profile, high school restructuring, school-to-work, learning styles, site-based councils, instructional strategies, and conflict resolution. Curriculum alignment continues to play a major role in professional development as the new core content guidelines have been distributed to school districts. In reviewing the 17 districts visited by OEA staff as to those producing successful results on the KIRIS assessment and their rating on the "efficiency index" (developed by Dr. Stephen Goetz and referenced in the Assessment section of this report), a high correlation was found between those districts with a recently completed curriculum alignment and those districts with a positive efficiency rating. In addition to assisting schools to be successful, curriculum alignment activities have opened up dialogue for subject area teachers from primary to high school. This opportunity to examine what is happening and the expectation of what is to happen at each level has the potential to better focus instruction. In interviews, district and school personnel have expressed the need for more time for training and interaction with other

professionals after training. OEA staff interviewed approximately 130 teachers in the 17-district sample during this past year as to professional development and its impact on instruction. The five most common responses include the following: the professional activities raised awareness level and expectations regarding application of skills; activities were helpful and of high quality; a wide variety of opportunities were available; time was needed to use the materials and share with other teachers; and some of the best activities were those provided by their own professional organizations.

The Partnership for Kentucky Schools and the Prichard Committee for Academic Excellence has commissioned a study of professional development in Kentucky. The preliminary findings of this two-year study, "Professional Development Under KERA: Meeting the Challenges," indicate the following:

- Professional development, with teachers in charge, has increased and improved.
- Current policies -- including required hours that teachers must accumulate -- reinforce traditional views of professional development and limit the options that are considered.
- Current professional development activities are more focused on techniques and procedures rather than helping teachers extend their knowledge of curriculum content and how to teach it.
- Kentucky's assessment system (KIRIS) drives professional development planning at most study schools.
- More promising models of professional development involving intensive collegial experiences are emerging.
- Promising options for professional development are difficult to implement in many schools.

We look forward to the completion of this study and an opportunity to review its implications.

The Kentucky Department of Education has initiated the Kentucky Leadership Academy (KLA) for superintendents, principals, and central office administrators. This training is based on proven educational best practices and is for 30 days over a period of two years. The training is to deliver strategies, materials, and support to help districts remain focused on student achievement. It is very similar to the training provided for distinguished educators. There are 330 people participating from 75 county districts, 24 independent districts, and 11 consortia. This program should provide trained leaders to assist distinguished educators in schools/districts that have need,

or, alternatively, provide leadership skills to prevent the need for distinguished educators in a school/district.

### **Recommendations**

1. Districts should study the issue of alternative uses of allocated time (1050 minimum hours) to provide opportunities for professional development activities. If the school day, week, or year is reconfigured, teachers will have additional opportunities for professional development activities during the year which would not require the use of substitute teachers. School calendars must be responsive to the needs of the professional staff. However, in order to have this happen, a master list of activities from the Kentucky Department of Education must be available to local districts by April 1. Additionally, the recent Opinion of the Attorney General's Office (OAG 97-25) requiring all teacher calendars to be 185 days may provide additional time for professional development activities outside instructional time. Although adding additional days for professional development is certainly desirable, the cost for each of these days is such that less costly alternatives should be studied.
2. Schools should provide site-based council training for all staff and include all interested parents. If everyone has the same training, faculty and parent participation on committees, as well as the council, could be increased.

## REGIONAL SERVICE CENTERS

**Overview.** Regional service centers (RSC) continue to serve as a link between local school districts and the Kentucky Department of Education (KDE). They provide technical assistance, information, and training for their districts for the implementation of reform.

Each RSC submits an annual action plan and a subsequent evaluation of such to KDE. A review of these plans and their evaluation demonstrates that the RSCs feel they are accomplishing their plans. A number of the recently submitted plans model consolidated planning and are in place for two years. As a result, many of these activities are ongoing and have not received a final evaluation.

Each RSC conducts a survey sampling its customers regarding their perspective on the quality and importance of the service center work. Each RSC may add additional questions which they feel are appropriate. In a review of the compiled results for the common questions, we find that an average of 38.5 percent of the questionnaires were returned. In the category of RSC use, each center appears to have a significantly high percentage of users among the responders. The surveys indicate that 84 percent receive a personal contact regarding requested services. Eighty-seven percent of the respondents report that the delivery of services were timely and accurate. In the review of this compilation of questionnaires it can be concluded that among the respondents, there is a strong belief that the RSCs are providing needed services to their districts/schools.

In the Office of Education Accountability's (OEA) monitoring staff visits to our 17 district sample, 16 districts report average to above average services received from their RSCs. Fifteen of these districts also report a strong working relationship between their cooperative and their RSC. The one negative report was due to the prohibitive distance from their center.

RSCs have provided valuable training and technical assistance to elementary schools in furthering primary school implementation. Each RSC has at least one full-time consultant who visits elementary schools on an ongoing basis to troubleshoot potential organizational and curriculum delivery problems. However, OEA has observed two troubling issues with RSCs' oversight of primary implementation: (1) RSCs have been alerted to nonimplementation of primary school in certain schools; however, RSC staff inform OEA that "unless the school or district requests assistance, they cannot get involved." (2) Only 268 of 803 elementary schools are required by the

district to implement the Kentucky Early Learning Profile (KELP), the state provided method to document progress of primary-age students. These policies should be reviewed by KDE/RSC staff.

District technology staff were generally complimentary of the support provided by the RSCs, particularly the regional engineers. However, several expressed concern that in some regions, top RSC staff were being recruited for the distinguished educator program thus reducing their availability to local districts for much needed technical assistance.

### **Recommendations**

Pulling regional service center staff to assist Improving Category 2 schools has placed a severe drain on staff time. This has resulted in a lack of time to assist all schools with their continuing need. Particularly, the Office of Education Accountability is concerned that school councils are not receiving the technical assistance needed to successfully implement school-based decision making in their schools. Since the passage of the Kentucky Education Reform Act, regional school-based decision making consultants have played an important role in the success of this initiative. It appears that the duties of school-based decision making consultants have expanded into other areas to the detriment of the school-based decision making initiative. With almost 1200 school councils, the amount of assistance needed is overwhelming. The Office of Education Accountability recommends that regional school-based decision making consultants be allowed to concentrate solely on providing technical assistance to school councils.

## SCHOOL-BASED DECISION MAKING

**Overview.** As intended by the Kentucky Education Reform Act of 1990, the plan to shift significant decision making to the school building level has fully evolved. Currently, there are 1184 schools participating in the school-based decision making (SBDM) process. Seven schools are exempt from this requirement due to being one-school districts. An additional 91 schools have requested and received an exemption due to exceeding performance thresholds on the Kentucky Instructional Results Information System (KIRIS). No other state in the nation has made such a comprehensive effort in decentralizing decision making.

Of the 1184 schools currently participating in the school-based decision making process, 60 are functioning with an alternative model. Thirty-five of the alternative models have someone other than the principal serving as chairperson of the council.

During the 1996 Regular Session of the General Assembly, KRS 160.345 was amended to require newly elected council members to receive six hours of SBDM training and experienced council members three hours of SBDM training. As a result, the Kentucky Department of Education (KDE) has increased its efforts to expand the number of endorsed trainers in school-based decision making. There are currently 187 trainers statewide who are endorsed to provide the required training for council members.

KDE has also developed the following strategies for providing support to councils:

- Handbook of Guidelines for Principal Selection
- Sample By-Laws for School Councils
- Technical Assistance upon request.
- School-Based Decision Making Advisory Committee
- Common Agenda Newsletter
- SYNERGY Handbook for Council Members

Approximately 700 school councils have now selected principals since 1990. The Office of Education Accountability (OEA) has included as Appendix D the annual survey results regarding the principal selection process.

Per KRS 160.345(9), OEA continues to receive complaints regarding interference with the implementation of SBDM. The complaints generally fall into the following categories: 1) council role in personnel selection, 2) implementation of school council policy, 3) misinformation/lack of information, 4) open meetings violations, 5) council member elections, and 6) school council allocations.

OEA received over 1300 phone calls regarding SBDM issues during the past calendar year. In addition, OEA received and/or generated over 700 pieces of written correspondence related to SBDM situations during the same period.

Based upon a review of hotline calls, written correspondence, and monitoring visits, OEA offers the following observations as a means of generating thoughtful discussions regarding the successful implementation of SBDM.

Progress to Date.

- SBDM has been adopted in schools throughout the state according to the legislated timeline.
- Most school councils further democratize the decision-making process by establishing committees that make recommendations regarding policy issues.
- There has been minimal conflict between school councils and school boards.
- Most school boards have adopted policies that facilitate the implementation of SBDM within their districts.
- Teachers and parents have a greater voice in decision making.
- The process for selecting principals appears to be more structured, systematic, and open.
- Most school councils are involved, in some manner, in analyzing and planning for educational improvement at the school level.
- Minority parents are more involved in decision making as a result of SBDM.
- School councils appear to be transitioning into more sophisticated areas of decision making that deal with curricular, programmatic, and instructional issues.
- More school funds are being spent on instructional materials and supplies than before SBDM.

### Challenges Ahead.

- Finding opportunities to analyze, discuss, and plan for instructional change at times that accommodate all stakeholders involved in the SBDM process.
- Clarifying the council role in personnel selection.
- Clarifying the superintendent's role in transferring personnel into SBDM schools.
- Making relevant curricular, instructional, and governance information available to parent and teacher council members.
- Transitioning councils from event training to an ongoing technical assistance model for improving their unique circumstances and problems.
- Making parents full partners in the decision-making process.
- Improving communication among all stakeholders in the SBDM process.
- Increasing opportunities for councils to learn from each other.
- Facilitating the relationship between councils and central offices.
- Providing principals with the facilitation and mediation skills needed in an SBDM school.

**Summary.** Implementing SBDM in almost 1200 schools is an extremely challenging task. It requires new roles for parents, teachers, principals, central office personnel, superintendents, and school board members. The progress made to this point has been remarkable. The challenge for the Legislature is to keep the basic legal structure in place while making the necessary improvements that fulfill the promises of SBDM.

### **Recommendations**

The members of the Governor's Task Force on Public Education have approved the following recommendations to the Legislature for the 1998 Regular Session of the General Assembly.

1. Amend KRS 160.345(2)(a) to increase the number of parents on school councils from two to three.
2. Amend KRS 160.345(2)(a) to allow a parent representative to serve on the council, unless the parent is an employee or a relative of an employee in a particular school, or an employee or a relative of an employee in the central office.

3. Create a new section of KRS Chapter 160 to require the public be fully informed regarding school-based council budget allocations, including the figures used to allocate the funds, the funds reserved by the school district, and the intended use of the district reserved funds.
4. Amend KRS 160.345(2)(h) to include a requirement for the council to develop procedures it will use for consultation in the selection of personnel.
5. Amend KRS 160.345(5) to require the district to report to the Kentucky Board of Education the parent and faculty vote when requesting an exemption of a school from having a council.
6. Amend KRS 160.345(9) to require the Office of Education Accountability to develop a uniform, confidential complaint process; to protect anyone bringing a complaint from punitive action or retribution; and requiring the Office of Education Accountability to resolve the complaint within six months or to forward the complaint to the Kentucky Board of Education.
7. Amend KRS 160.345(2)(b)1 to allow consecutive terms of school council members when the council adopts different terms of office.
8. Amend KRS 160.345(2)(b)1 to require the chair of the school council be elected by the council from its membership, rather than requiring the principal or head teacher serve as chair.
9. Amend KRS 156.101 to require the local district evaluation system include criteria relating to the evaluation of school principal's performance as a member of a school council and in implementation of the decisions of the council. Amend KRS 160.345 to require the local district establish procedures for gathering information from the council for consideration in the school principal's evaluation by the superintendent.
10. Request the Kentucky Department of Education and the appropriate subcommittee of the Interim Joint Committee on Education review the school council budget allocations and the process of professional development decision making within school districts.
11. Request the Task Force recommend to the Kentucky School Board Association that the school boards explore a more collaborative approach to the budget-making process that involves various community groups, teachers, parents, and school council representatives.

12. Amend KRS 160.345(2)(a) to remove the state residency requirement for teachers serving on school councils.

## SUPERINTENDENT/PRINCIPAL TRAINING AND ASSESSMENT

**Overview. *Superintendent Training.*** The superintendent training program and assessment center process (KRS 156.111) requires superintendents to successfully complete core programs in management, school-based decision making, school law, finance, curriculum, and assessment. After training, examinations must be successfully completed in each content area. All but three current superintendents completed this process as of July 1, 1997. These three were granted extensions for circumstances beyond their control. In addition, the statute requires anyone employed after July 1, 1994, as a first-time Kentucky superintendent, shall complete the assessment center process within the first year of employment. The Kentucky Board of Education is required to establish a continuing professional development program for all superintendents effective July 1, 1994.

The superintendent training program and assessment center process were developed and piloted in the 1992-93 school year. Eighty percent was determined as the required score for each of the five training modules. During 1996-97, 18 persons completed the superintendent assessment center process. The superintendents interviewed by the Office of Education Accountability staff indicated the information received during the training was worthwhile. However, they expressed concern about being out of their district for 15 days (3 days each for 5 components) during their first year.

***Principal Assessment.*** To date, the Kentucky Department of Education has identified and trained 1419 principals who served as assessors through the 1995-96 school year. The 1996 Regular Session of the General Assembly repealed KRS 156.105, and as a result, completing the principal assessment center process is no longer mandated.

Although not required, the Learning Early Assessment Program (LEAP) has been used by some universities and school districts as an instrument for principals to plan their professional development program. LEAP was used by the Kentucky Valley Educational Cooperative leadership development program as a pretest instrument.

The Kentucky Specialty Test of Instructional and Administrative Practices called for in KRS 161.027 for principal certification was administered to 317 principal candidates during 1996-97. Two hundred sixty-four candidates achieved the required 85 percent score. The remaining 17 percent must retake the exam until they are successful.

The internship program for principals, served during the initial year of employment, is another component of Kentucky's administrative process. For the 1996-97 school year, 55 principals served an internship, while 83 started their internship at various times during the year with completion to occur during this current school year.

### **Recommendations**

1. The Kentucky Department of Education needs to address the issue of those superintendents who do not complete the training/assessment within the specified time frame and determine how many times a candidate can take the test for each of the five modules.
2. Principal preparation programs need to include an assessment center process. This will allow identification of strengths and weaknesses for the candidates. This could serve as preparation for the performance assessments for principals being developed by the Educational Testing Service for the Interstate School Leaders Licensure Consortium, of which Kentucky is a member.
3. If the content and materials used in the superintendent training program were incorporated into the superintendent preparation, the assessments would be the only financial obligation of the Kentucky Department of Education. This would allow for assessment on demand and eliminate the need for a first-year superintendent to set aside 15 days (3 days for 5 training/assessment modules) out of his/her district.

## SUPERINTENDENT SCREENING COMMITTEES

**Overview.** KRS 160.352 calls for a specific procedure in the selection of a new superintendent and has as an integral part in the use of a screening committee. This committee is composed of two teachers elected by the teachers in the district; one board of education member appointed by the chairperson of the board; one principal elected by the district's principals; and one parent elected by the PTOs of the district. Additional provisions are made for minority representation in all districts having 8 percent or more minority enrollment. The board of education must consider the recommendations of the committee, but is not bound by its recommendations.

KRS 160.352(2) sets timelines for the establishment of a screening committee. These timelines allow 30 days to convene a committee after it is determined a vacancy has or will occur unless that vacancy will not occur within six months. In that case, it is not necessary to establish the screening committee until 90 days prior to the actual occurrence of the vacancy. There is no statutory set minimum or maximum time for the screening committee to complete its work, but it could be assumed by the 90-day wording in KRS 160.352(2) that the Legislature's intent, when there was ample notice of the vacancy and time constrictions were not an issue, 90 days would be sufficient for the screening committee to achieve its purpose. In reality other considerations come into play including short notice of vacancies, the necessity of hiring prior to the start of summer preparations for school openings, the size of the district, number of applications, the scope of the search, etc.

**Screening Committee Survey.** Since early in the Office of Education Accountability's (OEA) operation, OEA has conducted a survey of the screening process in those districts in which a new superintendent has been hired. Last year we reported 163 districts had responded to our survey and from reviewing these survey results, we concluded the selection process, as mandated by KRS 160.352, had been closely adhered to in all but a few isolated instances.

Since the last report, some survey questions have been added and others modified to provide more information regarding the process. Since those changes were made, 33 districts have completed a superintendent selection procedure and have responded to the survey. The time period covered by this review is from approximately June 1, 1996 through mid-September 1997. There were a few additional districts in which the selection process was completed during this period of time, but they failed to fully or clearly respond to the survey. This occurred less than five times during the period.

It should also be noted that an additional 10-12 districts are in the process of selecting a superintendent at the time of this writing (September 1997) and four other districts have completed their process but have not, as yet, responded to the survey.

Based on those figures, slightly less than 50 of Kentucky's 176 school districts were in or are currently in the superintendent selection process during this period of time between June 1, 1996 and mid-September 1997. This represents about 28 percent of Kentucky's districts seeking new superintendents during a 15½ month period.

All of the 33 districts properly convened a superintendent selection committee to screen and evaluate the applications received pursuant to KRS 160.352. Under this process, it is expected the superintendent selection committee will reduce the field of applicants based upon qualifications and other factors and select a number of the best qualified applicants to recommend to the local school board. Having a group made up of a board member, a parent, teachers, and a principal tasked with a single mission of selecting and recommending the best candidates for the board's consideration, serves to involve the schools and community in the superintendent selection process and to reduce the burden upon the local board of education in the initial screening process.

For the balance of this review, we will be reporting only on the 33 districts that have completed the selection process and responded to our survey. It should also be noted the figures used in this review are not 100 percent accurate due to some minor errors and omissions in the completed surveys, but are sufficiently accurate to make observations, comments, and reach some conclusions.

In these 33 districts there were a total of 865 applicants responding to the posting and advertising of these superintendent positions. The fewest number applicants per district were eight and this occurred three times. The largest number of applicants for a single district was 64 and that occurred only once. The average number of applicants for all the districts was about 26.

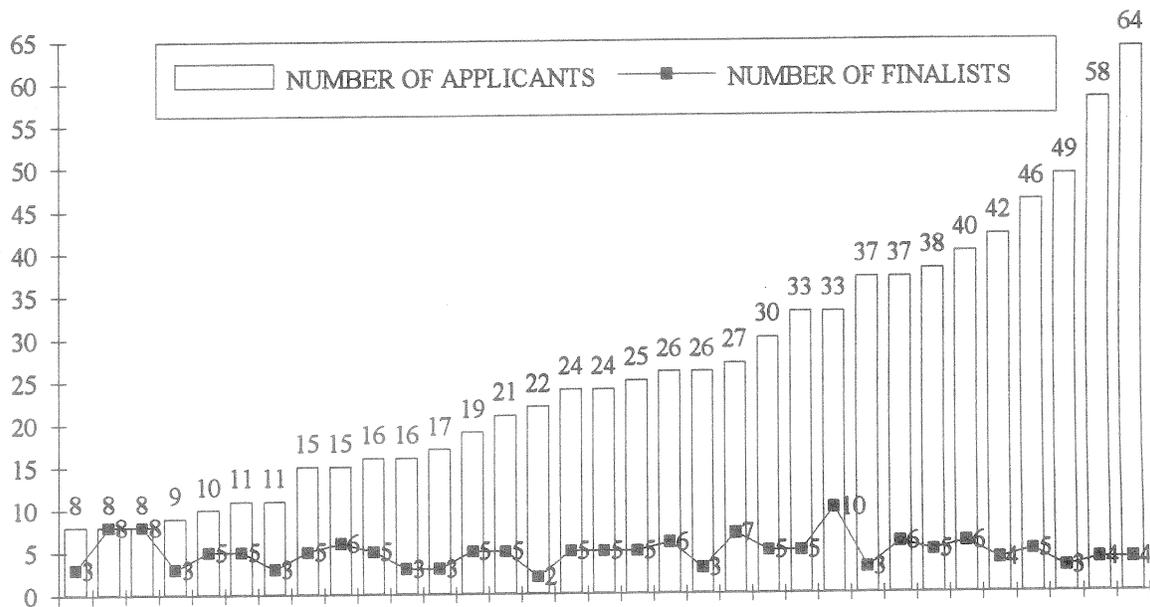

- Five districts reported 10 or less applicants
- Eight districts reported 11-20 applicants
- Nine districts reported 21-30 applicants
- Six districts reported 31-40 applicants
- Three districts reported 41-50 applicants

- One district reported 51-60 applicants
- One district reported more than 61 applicants

The following figure represents the total number of applicants for each of the 33 districts and the number of finalists selected by each screening committee.

**FIGURE 17**

**33 SURVEY DISTRICTS**

Overall these screening committees in the 33 districts reduced the approximately 865 applicants to 160 finalists that were recommended to the local boards or approximately 18.5 percent of the total field of applicants. These superintendent selection committees selected as few as two finalists to recommend to their local boards and in one case as many as ten. In two instances where the superintendent screening committee received eight total applications, they recommended all eight of the applicants to the board apparently finding it unnecessary to screen any of the field. In two other cases where 64 and 58 applications were received by the committees, both committees reduced the finalists to six or less. In one district 49 total applicants were reduced to three finalists. The range of recommended finalists made to the local boards by the superintendent screening committees were as low as 6 percent and as high as 100 percent.

The average number of finalists recommended to the local boards in these 33 instances was about five.

The 33 districts reported a total of ten minority applicants in their total candidate field, but it must be noted this is not a reliable or realistic figure. In the screening procedures used by most districts, the initial reductions of applicants involve only the review of résumés and there is no way to determine whether or not a particular résumé was from a minority applicant. As a result, many districts simply answered the minority question on the survey by writing in "unknown." Three of the thirty-three districts did report one minority member among their finalists.

Of the approximately 865 applicants applying for 33 superintendent positions, approximately 110 were female candidates accounting for about 12.5 percent of the total. The remaining 755 applicants were male accounting for approximately 87.5 percent of the total.

Approximately 160 finalists were recommended to the various boards of education for consideration. Twenty-six were female and one hundred and thirty-four were male, for approximately 16.25 percent and 83.75 percent respectively. Three minority finalists were reported accounting for less than 2 percent of the finalists.

Thirty-one males were selected as superintendent while only two females were hired (94 percent and 6 percent respectively). No minorities were hired as superintendent during this period.

Of the 33 districts reviewed, only one board of education hired a superintendent who was not one of the finalists recommended by the screening committee. In reviewing the 33 districts responding to the survey, all were able to establish and charge their screening committees within the timelines mandated by the statute. Several districts started the process immediately upon their determination that a vacancy would occur.

In this group of 33 districts convening screening committees, some had lives as short as three weeks and others as long as five months. Only six districts reported their screening committee was in operation less than two months. Seven districts reported their screening committee worked for three months or more. Nineteen other districts reported their screening process at approximately two months. (One district failed to report that item). Based upon these figures, it would appear in almost all cases the screening committees are given ample time to adequately and conscientiously meet their statutory obligation. This conclusion is supported by the fact that

during the past year OEA has not received any complaints from screening committee members regarding timelines.

Since only one of these 33 boards of education selected a superintendent who was not on the screening committee's recommended list, it would appear safe to conclude a clear majority of these boards of education embrace this screening process and respect the work and recommendations of their screening committees.

The last observations drawn from the review of these 33 selection processes involves the comparisons of the recommendations of in-district/out-of-district candidates. Of the approximately 160 finalists recommended to the local boards, 45 were in-district applicants. This is approximately 28 percent of the finalists and would appear to show little or no bias in favor of in-district candidates on the part of the screening committees. It is interesting to note that local boards of education seem to find a higher comfort level in hiring a superintendent with whom they are acquainted. While the superintendent screening committee recommended 28 percent in-district and 72 percent out-of-district candidates, the boards hired 45 percent in-district candidates and 55 percent out-of-district candidates.

**Summary.** Based upon the foregoing review, it appears the provisions of KRS 160.352 are being followed by the districts surveyed during this time period. All districts convened their superintendent screening committees within the mandated timelines. Twenty-six of the thirty-three districts granted their committees more than ample time to complete their screening process and only one of the remaining seven appeared to constrict their committee's work by giving it less than a month to complete its screening process. All but two of the thirty-three committees reduced large fields of applicants to a number of finalists that the local board could reasonably consider in their limited time. Finally, all but one of the 33 districts reviewed selected a superintendent from the list of finalists recommended by the screening committee. Overall it would appear the screening committee procedure, as envisioned by the Legislature in the passage of KRS 160.352, is being properly and successfully implemented in the school districts of the Commonwealth.

### **Areas for Discussion/Action**

In our previous report we encouraged school districts to seek assistance from consultants during their selection process. Since this selection and screening process is important and requires a significant investment in time and effort, we will again encourage districts to provide screening

committees and boards of education ample time to complete their work and sufficient assets to engage those with the expertise and experience necessary to enhance their screening and selection process.

### **Recommendation**

During the last two years, at least three school districts have found themselves in violation of KRS 160.350. This occurred when they hired as their new superintendent, the individual they had previously appointed as their acting or interim superintendent. It is the belief of this office these occurrences were inadvertent or based upon a misunderstanding of the statute. It has nevertheless caused each of these districts to go through the hiring process at the end of the school year, which is disruptive and expensive. On September 23, 1997, the Attorney General's Office issued OAG 97-35 that clearly construes KRS 160.350(1) to mean an acting superintendent appointed under this statute may not be appointed superintendent.

It is, therefore, suggested when a vacancy in the superintendent's office occurs, KRS 160.350 and OAG 97-35 be carefully reviewed prior to the appointment of an interim superintendent and the beginning of the screening process in KRS 160.352.

*INVESTIGATIVE  
DIVISION*

**Supreme Court and Legislative History:** In Rose v Council for Better Education, Inc., Ky., 790 SW 2nd 186 (1989), the Kentucky Supreme Court declared that education was a basic and fundamental right that was guaranteed by Section 183 of the Kentucky Constitution. Section 183 provides that:

*The General Assembly shall, by appropriate legislation, provide for an efficient system of common schools throughout the state.*

The Kentucky Supreme Court then set forth nine characteristics that were essential and minimal to an efficient system of common schools. Among those nine items was the following passage:

*Common schools shall be monitored by the Kentucky General Assembly to assure that they are operated with no waste, no duplication, no mismanagement, and with no political influence.*

Earlier in the same opinion the Court notes that the trial court stated:

*An adequate school system must also include careful and comprehensive supervision at all levels to monitor personnel performance and minimize waste. If and where waste and mismanagement exist, included, but not limited to improper nepotism, favoritism, and misallocation of school monies, they must be eliminated through state intervention if necessary.*

In this landmark decision the Kentucky Supreme Court returned at several points in its opinion to its firm belief that the constitution of the Commonwealth mandated that the Kentucky General Assembly was solely responsible for the establishment of an efficient system of common schools and added that "... it must monitor it on a continuing basis so that it will always be maintained in a constitutional manner. The state must carefully supervise it, so that there is no waste, no duplication, no mismanagement, at any level."

During the 1990 Regular Session of the Kentucky General Assembly, a body of law, generally referred to as the Kentucky Education Reform Act, was passed and became effective July 13, 1990. Included in that body of law designed to establish an efficient system of common schools

was KRS 7.410. The first sentence of Section 1 of KRS 7.410 states the intent of the Legislature in its passage of KERA and echoes the opinion of the Kentucky Supreme Court:

*(1) It is the intent of the Kentucky General Assembly to promote an efficient system of common schools which shall be operated without waste, duplication, mismanagement, and political influence.*

Section (2)(c) of KRS 7.410 sets out the duties and responsibilities of the Office of Education Accountability (OEA) under seven subsections. KRS 7.410(2)(c)4 again returns to the language of the Kentucky Supreme Court in the Rose decision in describing the office's responsibilities in the investigation and resolution of allegations of wrongdoing at all levels of the educational process in the Commonwealth of Kentucky:

*4. Investigate allegations of wrongdoing of any person or agency, including, but not limited to, waste, duplication, mismanagement, political influence, and illegal activity at the state, regional, or school district level which have not been resolved or satisfactorily explained by the local superintendent, local board of education, the chief state school officer, or the Kentucky Board of Education, and make recommendations for action to the Legislative Research Commission.*

**Establishment and Operations of the Investigative Division.** In response to this statute, OEA was established in the Legislative Research Commission and on February 16, 1991 the Investigative Division of the office was put in place. At that time, the Investigative Division consisted of one person, the division director. Over the next two years full-time staff grew to two attorneys/investigators (who also acted as general counsel for OEA and division director) plus two administrative assistants (one of whom also acts as a legislative analyst). Four part-time investigators and one Certified Public Accountant (CPA) were added to the staff, but are used only on a part-time as-needed basis. This staff has remained level since mid-1993 and has been sufficient to meet the investigative mandate of KRS 7.410 while keeping costs to a minimum through the use of part-time and contract professionals. All the part-time investigators are retired federal investigators with well over 125 years of combined investigative experience. OEA's contract CPA has a broad base of experience in school finance and over 20 years of practice as.

Over 600 miscellaneous inquiries and investigative files have been opened since February 1991 based upon allegations of wrongdoing, waste, mismanagement, duplication, etc. Only a few of these files are administrative in nature. Almost 90 percent of these files are based upon

allegations of some irregularity that required some level of inquiry or investigation in order to reach a resolution as mandated by KRS 7.410. Currently less than 50 of those investigative matters remain under review and unresolved. Over the past 3-4 years, this number of active reviews has remained constant as has the opening of approximately 80-100 new matters per year that call for some level of inquiry or review.

In previous reports, it has been noted that the great majority of the work of the Investigative Division in resolving allegations of wrongdoing, etc., requires only minimum inquiry and some limited correspondence with the district involved. Some issues and allegations that are somewhat more complex may require one or two on-site reviews in the district. Most of these matters are also resolved at the district level by corrective action taken by the district after recommendations or suggestions by OEA. In only 14 of the over 550 matters opened for review has it been necessary to refer our findings to the Chief State School Officer for consideration of charges to be adjudicated before the Kentucky Board of Education (KBE). It is noteworthy that in all of these 14 matters referred to the Kentucky Department of Education (KDE), the Commissioner and his staff agreed with OEA's position and filed charges. This has occurred in considerably less than 5 percent of our investigative reviews and only where the evidence of waste, mismanagement, wrongdoing, incompetence, etc., is so compelling that it is obvious and clear that no resolution can be achieved at the district level.

The determination of whether an allegation is worthy of inquiry or investigation is made only after a review and consideration of several factors. The factors considered are as follows: the quality of the information, the seriousness of the allegation, the specificity of the information, whether the complainant has firsthand knowledge or is simply repeating rumor and hearsay, whether there are other complainants or similar complaints regarding the same issues in the same district, the potential for damage to the district if true, and the provability of the allegations.

The sources of the allegations that lead to inquiries or investigations are numerous. They include, but are not limited to, the following: hotline telephone calls; correspondence; personal visits; newspaper reviews; requests and referrals from other agencies; requests from school boards, superintendents and other school district employees. In many instances sources of allegations are fully identified. Some sources have requested confidentiality and others are simply anonymous.

It has been and will remain the policy of this office to accept, assess, and if necessary take action based upon anonymous information if it meets the previously discussed criteria for specificity, seriousness, provability, etc. While it would be preferable to have the sources of all information

fully identified, the nature of the Investigative Division's work and the mind-set of some of those providing information compels this division to do otherwise. In the past this office has received follow-up letters or hotline calls from sources who have previously provided anonymous information complaining that nothing has been done in response to their concerns. Of course, there was no way to communicate to these complainants what action was or was not taken in response to their information and the rationale for the decision made by staff. In some cases contact has been made with the district and appropriate action was taken to resolve the issue, but the complainant is not aware of the charge. In other cases the information was found to be erroneous or the applicable law was misunderstood by the complainant. While this inability to communicate with an anonymous complainant is an inconvenience and at times a liability, it is still the belief of this office that the acceptance and assessment of anonymous information provides sufficient positive results to outweigh the negative factors. To refuse to consider anonymous information or fail to promise confidentiality would be unfair to those who have significant information to provide, but are truly afraid of being identified as the source of such information.

**Liaison.** Since its inception, the Investigative Division has recognized the importance of maintaining a close relationship with other agencies of state government which are involved in endeavors that are similar to OEA's. The maintenance of these relationships facilitates the free flow of information between agencies and encourages referrals of complaints to and from these agencies so that the agency having the primary interest and jurisdiction will conduct whatever inquiry is appropriate. This exchange of information also reduces the possibility of duplication of efforts in those situations where complainants have sent similar complaints to several agencies, thus preventing the wasteful use of limited resources of the agencies involved. Periodic contact is maintained with several divisions of the Attorney General's Office, the Auditor of Public Accounts, and the Kentucky State Police Special Investigations Unit. The Investigative Division also maintains close contact with KDE's Legal Services Office, Division of District Finance, Division of Management Assistance Program, and the Education Professional Standards Board.

**Referrals to the Chief State School Officer.** Since February 1991, information and suggested charges regarding seven district superintendents were referred to the Chief State School Officer for removal action under KRS 156.132. In each of these referrals, the Chief State School Officer presented removal charges against these superintendents to KBE. As a result, five superintendents resigned after charges were filed and two were removed by action of KBE following a hearing. One additional superintendent retired during a comprehensive review of his district that without question would have resulted in charges being filed. One other

superintendent retired when it was pointed out to him that he was in violation of KRS 160.380 (2)(e) and had been since the effective date of the statute, July 13, 1990.

During the same period, information and suggested charges regarding 19 board members were referred to the Chief State School Officer for consideration of removal. As a result of these referrals, four board members were removed by action of KBE and two were reprimanded and/or suspended. Twelve resigned subsequent to charges, but prior to any KBE action. Several other board members have resigned during ongoing reviews and prior to any charges being filed. Also during the past seven years, a significant number of board members have resigned when it was pointed out to them they were in violation of the provisions of KRS 160.180 (Eligibility Requirements), 160.380 (Nepotism Issues), and 61.080 (Incompatible Offices).

It has been the policy and practice of this office and division to recommend removal charges only when we have found and produced the same level of evidence that is required to convict in a criminal court. OEA has always refrained from suggesting charges for petty or inconsequential violations of school laws and have gone forward only where the evidence was clear and overwhelming that serious and repeated violations of a significant nature had occurred and that they had deleterious consequences for the district. To take any other stance in these matters would tend to indicate that this office did not consider the possible removal of individuals from superintendent's positions or elective office as the very serious business it is. Neither the Commissioner nor his legal staff have ever rejected our recommendations that charges be lodged before KBE, and KBE has never found any of our recommended charges to be without merit or our proof to be wanting.

**Summary.** It will remain the policy of OEA and its Investigative Division to aggressively and fairly respond to allegations of waste and mismanagement, political influence, improper nepotism, favoritism, misallocation of school monies, and such other matters that are deemed within our mandate. This, of course, will be undertaken only after careful review and analysis of the allegations presented and a recognition that honest mistakes are made and must be treated as such where the facts and circumstances indicate such a course of action. To operate under any other policy would be an affront to the Supreme Court of Kentucky and the Kentucky General Assembly and a disservice to the children and taxpayers of the Commonwealth.

# *FINANCE*

**Overview.** The Kentucky Education Reform Act (KERA) of 1990 completely overhauled Kentucky's system of education the primary element of which was a new funding formula. The new formula, called the Support Education Excellence in Kentucky (SEEK) program, provides for a minimum local tax effort, increases support to local schools, and alters the distribution of state educational dollars.

In addition, the Facilities Support Program in Kentucky (FSPK) provides equalized funding for capital construction. Other state funding in the form of categorical grants include extended school services, pre school education, professional development, technology, school rewards, and family resource and youth services centers for students and their families.

One of the most important responsibilities of the Office of Education Accountability (OEA) is to 'conduct an ongoing review of the finance system which shall include an analysis of the level of equity achieved by the funding system.'

The following report, the seventh issued by OEA, will illustrate the degree to which the formula has reduced the funding gap between Kentucky's rich and poor districts. To accomplish this task, data are presented by wealth quintile for fiscal years 1989-90 through 1995-96. Revenue data by district are also presented for the same fiscal years.

The term equity is defined by Webster as 'the quality, state, or ideal of being just, fair, and impartial.' So perhaps the ultimate measure of the success of any formula is the element of fairness.

Equity (or fairness) in a state's school finance system is based on the fair treatment of individual students. Conceptually, it is three dimensional: i.e., horizontal, equal opportunity, and vertical. The design of the SEEK program encompasses these equity principles which are described as follows:

- *Horizontal equity* - Occurs when all students in the state are fairly treated in accordance with the constitution and statutes of the state. Horizontal equity usually refers to equal treatment of equals. This equity principle is based upon the democratic concept that all persons are of equal worth, and that each individual person is of great worth. Therefore,

when it comes to public education, all students are worthy of both equal and adequate treatment. The SEEK program's per pupil base amount, which is set by the Kentucky General Assembly, is the same for every student in Kentucky, therefore, assuring horizontal equity.

- *Equal Opportunity equity* - Is defined as the condition when all students in the state have equal opportunity to participate in quality educational programs. This occurs when students with equal educational needs have equal amounts of revenue to purchase educational services regardless of their location within the state. The SEEK program establishes the minimum property wealth behind each student in the Commonwealth at 150 percent of the statewide average per pupil property wealth for Tier I and FSPK, thereby making sure there is equity of opportunity.
- *Vertical equity* - Refers to unequal treatment of unequals. Some students bring with them handicapping or disabling conditions which require a greater investment. Therefore, increased financial resources may be needed to provide some students with educational services needed to help them reach their potential for independence and achievement. To achieve vertical equity, the SEEK program provides adjustment factors for exceptional children, at-risk pupils, and home and hospital based students.
- *Adequacy* - Is obtaining the maximum amount of student achievement from a given amount of expenditures from a state's funding for public education. Kentucky's 1990 education reform is designed to increase the levels of pupil performance measured by the statewide assessment program, the Kentucky Instructional Results Information System (KIRIS). The next step is utilizing KIRIS as the "measuring stick" and conducting costing studies of districts who consistently score in the Rewards category to determine if funding is "adequate."
- *Stability* - Occurs when the combined state and local revenues for school districts do not fluctuate widely from year to year. The SEEK program's "hold harmless" provision provides stability of state aid to districts which might otherwise generate less state revenue per pupil through the SEEK program than they did in 1991-92.
- *Responsiveness* - Is achieved when a state's finance system provides for increased state aid when local revenues decrease and vice versa. The SEEK program reacts annually to changes in per pupil property wealth and increases in average daily attendance (ADA).

- *Efficiency* - Is measured in part by the amount of revenue required to maintain equity in a state equalization program for funding education. The SEEK program has reduced the range of revenues per pupil between the lower and higher wealth quintiles. This reduction of the range of revenues has been accomplished by bringing up the revenues per pupil of the lower wealth quintiles while not decreasing the revenues per pupil of the higher wealth quintiles.

**SEEK.** The SEEK program is a "tiered" system composed of three distinct but closely related components. These are:

**1. Adjusted Base Guarantee.** The adjusted base guarantee is the first component of the SEEK program. It is a guaranteed amount of revenue per pupil to be provided for each school district adjusted by a series of factors that affect the cost of providing services to students. The base amount is adjusted by four factors - exceptional children, transportation, at-risk pupils, and pupils receiving services in a home and/or hospital situation. The following adjustments are a means of directing additional state funds to students and districts with special and varying needs.

- The adjustment for exceptional children is a weighted calculation that considers the number of identified children with various exceptionalities.
- The adjustment for transportation is determined by applying the formula contained in KRS 157.370.
- The adjustment for at-risk pupils is determined by applying a factor of .15 for each pupil approved for free lunch under the National School Lunch Program.
- The adjustment for students who are unable to attend regular school sessions because of short-term health impairments (referred to as home and hospital) is determined by applying a formula found in KRS 157.360(12)(a)(b). (The 1996 Kentucky General Assembly amended KRS 157.360(12)(a) which changed the calculation of add on funds for home and hospital instruction from current year to prior year ADA.)

KRS 160.470 requires each local school district levy a minimum Equivalent Tax Rate (ETR) of 30 cents per \$100 of assessed property value. This required "local effort" is the local contribution to the adjusted base guarantee. The difference between the local effort and the adjusted base represents the state SEEK contribution to the local school district.

The base amount is set biennially by the Kentucky General Assembly and is the only amount in the SEEK program that is constant for all districts. Each of the adjustments will vary depending on

the needs of the student population in each school district; the local effort will also vary from district to district depending on the property wealth of the district. Additionally, when calculating the SEEK program, all calculations are made on a per pupil basis and the calculated amounts apply to each pupil in the district.

For example, using the at-risk factor, suppose a school district has 2000 students and 1000 are approved for free lunch. Each student approved for free lunch generates \$401 (i.e., the 1996-97 base amount of \$2673 times .15) for a total of \$401,000 (\$401 times 1000 approved students). This \$401,000 is then spread across the entire student population to display an amount per pupil. In this example, the at-risk factor is \$201 per pupil (\$401,000 divided by 2000 and rounded). Similar calculations are made for the other adjustment factors.

**2. Tier I.** Tier I, the second component of the SEEK program, is optional and allows local school districts to generate additional revenue of up to 15 percent of the adjusted base guarantee. School districts whose per pupil property wealth is less than 150 percent of the statewide average per pupil property wealth (e.g., \$365,000 in 1996-97) receive state equalization funds (if they choose to levy this additional tax). Districts may participate at any level up to 15 percent, and the state provides equalization funds to guarantee that any participating district will receive the same revenue per pupil if they make the same tax effort. The tax rate levied by a local school board under Tier I is not subject to the public hearing and recall provisions contained in KRS 160.470. In 1996-97, 161 districts participated at the maximum level in Tier I. The remaining 14 districts participated to some degree in Tier I.

**3. Tier II.** Tier II, the third component of the SEEK program, is also optional. Tier II allows school districts to generate additional revenue up to 30 percent of the amount generated by the adjusted base guarantee and Tier I. These funds are not equalized by the state, and hearing and recall provisions of KRS 160.470 do apply. Tier II is designed to maintain a cap on the amount of revenue a local school district can generate, thereby maintaining some control over the disparity in per pupil revenues that might be available in local school districts. House Bill 940 mandated no school district would be required to levy an ETR lower than the rate levied during 1989-90. This "grandfathering" does make it possible for a school district to have a tax rate higher than that permissible under Tier II. In 1996-97, 161 school districts participated at some level in Tier II which generated \$195,218,048.

The amount of additional funding that can be achieved through Tier II, like Tier I, is dependent on the adjusted base guarantee. This provides an incentive for every school district in the state -- not

just the less wealthy -- to be vitally concerned about the base level funding established each biennium by the Kentucky General Assembly.

Table 26 illustrates the state and local funds provided for Kentucky school districts from 1989-90 through 1996-97. The columns identify the source, amount, percent of total state and local, the dollar amount change from the prior year, and percent change from prior year. Since 1989-90, the total amount of state and local funds provided for school districts has increased 64.3 percent (\$1.290 billion). The state effort increased by 55.1 percent (\$859.7 million) while the local effort increased by 96.9 percent (\$430.3 million).

Additional data review reveals that by 1996-97 the percentage of state and local funds provided for school districts outside of the state's finance program increased from 16.2 percent in 1989-90 to 20.8 percent in 1996-97. At issue are the extended school services program, the preschool program, family resource and youth services centers, gifted and talented, and other categoricals that remain outside the SEEK program. In 1991, John Augenblick (consultant to the Finance Task Force), recommended that funding for these programs be blended with the SEEK program after five years because categorical programs can negatively affect the equity of a state's school funding program. The data presented in this table are based on information from Kentucky Department of Education (KDE) Final SEEK Circulars (1990-91 through 1996-97) and Kentucky Biennial Budgets (1988-90 through 1996-98).

Total state funds available to local school districts are comprised of the SEEK adjusted base guarantee, Tier 1, FSPK, and the categorical programs. Table 27 provides a review of these totals from 1989-90 through 1995-96 by wealth quintile. Each quintile includes approximately 20 percent of the state's students. The average state revenue increased by 48.3 percent from \$2206 in 1989-90 to \$3272 in 1995-96.

Table 27 shows that the average local revenue increased by 85.3 percent from \$842 in 1989-90 to \$1560 in 1995-96. Positive results are evident when comparing combined state and local revenues. The difference between the lowest and highest wealth quintiles has decreased by 41.2 percent from \$1511 in 1989-90 to \$889 in 1995-96. Figure 18 demonstrates how the difference in state/local revenues between the highest and lowest wealth quintiles have narrowed from

**FIGURE 18 STATE/LOCAL REVENUE DIFFERENCES  
BETWEEN HIGH (Q5) AND LOW (Q1) WEALTH QUINTILES**

1989-90 to 1995-96. Table 27 shows that total revenues (state, local, and federal) increased by 57.8 percent from \$3410 in 1989-90 to \$5381 in 1995-96.

Tables 32 through 36 (Appendix E) illustrate local, state, federal, state/local, and total per pupil revenues from 1989-90 through 1995-96 by school district. Also, Tables 37 and 38 (Appendix E) show end of the year adjusted average daily attendance (AADA) and per pupil property wealth by district. The data presented in these tables are based on information from KDE Receipts and Expenditures Reports (1989-90 through 1993-94), Minimum Foundation Program Circular (1989-90), Final SEEK Allocation Circulars (1990-91 through 1996-97), Attendance Reports (1988-89 through 1996-97), School District Annual Financial Reports (1995-96), and School District Audits (1995-96).

After seven years, it is important to learn what "real" funding changes occurred in Kentucky's local school districts through the SEEK program. This requires converting "actual dollars" to "constant dollars," thereby, removing the effects of inflation. Since there are no Kentucky specific price indices, nor education expenditures indices, the U.S. Department of Commerce's "Fixed Weighted Price Index for State and Local Government Purchases" was utilized. This index more closely resembles the "basket of goods" school districts purchase than other indices (e.g., Consumer Price Index). Multipliers were used to compute the 1989-90 through 1996-97 per pupil state, local, and state/local effort by district in FY 1996-97 dollars. For information purposes, data are presented in both actual and FY 1996-97 constant dollars.

Table 28 lists local, state, and state/local effort per pupil from 1989-90 through 1996-97 by wealth quintile in actual dollars. Additionally, Table 29 shows local, state, and state/local effort per pupil from 1989-90 through 1996-97 by wealth quintile in FY 1996-97 constant dollars. Table 28 (actual dollars) demonstrates from 1989-90 to 1996-97 the average local effort increased by 96.9 percent from \$772 to \$1520; state effort increased by 39.4 percent from \$2119 to \$2953; and, state/local effort increased by 54.7 percent from \$2891 to \$4473. Table 29 (FY 1996-97 constant dollars) shows from 1989-90 to 1996-97 the average local effort increased by 60.8 percent from \$945 to \$1520; state effort increased by 13.9 percent from \$2593 to \$2953; and, state/local effort increased by 26.4 percent from \$3539 to \$4473. Figure 19 illustrates the change for state/local effort from 1989-90 to 1996-97 in actual and FY 1996-97 constant dollars. Both methodologies demonstrate significant increases in funding for Kentucky's schools. The data presented in these tables are based on information from KDE Minimum Foundation Program Circular (1989-90), and Final SEEK Allocation Circulars (1990-91 through 1996-97).

**PUPIL WEIGHTED AVERAGES FOR  
STATE AND LOCAL EFFORT  
(ACTUAL AND FY 1996-97 CONSTANT DOLLARS)**

In addition, these Fixed Weighted Price Index for State and Local Government Purchases multipliers were utilized: FY 1989-90, 1.224; FY 1990-91, 1.172; FY 1991-92, 1.146; FY 1992-93, 1.119; FY 1993-94, 1.094; FY 1994-95, 1.064; FY 1995-96, 1.029; and FY 1996-97, 1.000.

**Context For Equity Analysis.** In June 1989, the Kentucky Supreme Court (Rose v. Council for Better Education) declared the education system unconstitutional. This decision substantially expanded the scope of the Franklin Circuit Court's 1988 decision in the Council for Better Education, Inc. v. Wilkinson (Corn's decision) declaring the state's school finance system to be in violation of the Kentucky Constitution's education clause, which requires that: "the Kentucky General Assembly shall provide for an efficient system of common schools throughout the state."

The Circuit Court found that there was marked variation in the property wealth of school districts; the allocation of state aid did not compensate for the variation in wealth; there was a wide disparity in the per pupil revenue of school districts; and, the quality of education was contingent on available revenue. Also, the Circuit Court concluded that an efficient school finance system required "substantial uniformity" and "substantial equality" of financial resources. Additionally, the Circuit Judge, Ray Corns, stated that the current system of school financing was inefficient and discriminatory.

The Supreme Court further determined that the essential and minimal characteristics of an efficient system of common schools should include these provisions:

1. Its establishment, maintenance, and funding are the sole responsibility of the Legislature.
2. It is free to all.
3. It is available to all Kentucky children.
4. It is substantially uniform throughout the state.
5. It provides equal educational opportunities to all Kentucky children.
6. It is monitored by the Kentucky General Assembly to assure there is no waste, no duplication, no mismanagement, and no political influence.
7. Schools are operated under the premise that an adequate education is a constitutional right.
8. Sufficient funding provides each child an adequate education.

Although the Supreme Court's decision neither identifies nor mandates the criteria for ascertaining the equity of the state's school finance system, items 3, 4, 5, and 8 identified previously infer the need to see that revenues are distributed fairly among Kentucky's children. Horizontal, equal

opportunity, and vertical equity principles are generally recognized among school finance researchers as appropriate standards. However, for purposes of this report, only horizontal equity principles will be used to assess the degree of equity accomplished by the state's school finance program from 1989-90 through 1995-96. (The quantitative measures for equal opportunity and vertical equity were presented in the 1996 OEA Annual Report.)

**Equity Analysis Procedures.** Equity is the concept of fair treatment of individual students. Funds are allocated to local school districts for delivering educational services to students. Therefore, students not school districts are the subjects of equity analysis. Since school districts serve students, they are used as data sources. Data are based on revenues which each district receives minus Capital Outlay and FSPK funds. Variables used in the analyses include:

- Funded ADA (previous year's end of the year AADA plus current year's second month growth factor).
- State, local, federal, state/local, and total revenues per pupil by Funded ADA (minus Capital Outlay and FSPK funds).
- Property wealth per pupil by Funded ADA.

The data used in the analyses are based on information from KDE Receipts and Expenditure Reports (1989-90 through 1993-94), Minimum Foundation Program Circular (1989-90), Final SEEK Allocation Circulars (1990-91) through (1995-96), School District Annual Financial Reports (1995-96), and School District Audit Reports (1995-96).

As a multi-tiered system, the fundamental premises of SEEK's design are:

- State aid is sensitive to the needs, wealth, and tax effort of local school districts.
- Variation in state and local revenues among school districts can be explained primarily by differences in their needs and tax effort.
- School districts have reasonable (not unlimited) flexibility to determine how much they want to spend.
- All school districts have the same opportunity to generate revenues at a level they select up to the established maximum cap.
- School districts have reasonable flexibility to spend funds.
- State aid that is not sensitive to wealth or need of the school district (e.g., hold harmless funds) is limited.

- Taxpayers are treated equitably by all real property being assessed at 100 percent of its fair cash value.

The pupil counts used in the equity calculations are Funded ADA. The pupil is the unit of analysis for all equity calculations. Calculations are weighted based on the district's Funded ADA. Therefore, all calculations are based on the number of students, not the number of school districts.

The variable used to indicate a school district's wealth is property wealth per pupil by Funded ADA. Revenue generated by the SEEK program for school districts is the sum of local and state effort. The primary reason for using revenues rather than expenditures is revenues can be examined by source: state, local, and federal. By removing Capital Outlay and FSPK funds, state and local revenues become acceptable input cost measures.

**Equity Analysis Results.** KRS 7.410 provides OEA shall analyze the level of equity achieved by the SEEK program. Robert Berne and Leanna Stiefel's 1984 book, The Measurement of Equity in School Finance, provides the basis for this equity analysis.

Horizontal Equity. The SEEK program is designed to provide equal treatment of equals (horizontal equity). This principle states that students who are alike should receive equal shares from a state's school finance system. Equity can be assessed by measuring the dispersion, or inequality in the distribution of objects (i.e., revenues).

A measure of horizontal equity is the *coefficient of variation*, defined as the standard deviation divided by the mean. The closer the coefficient of variation is to 0 the more equitable the distribution of revenues. Funded ADA and state, local, federal, state/local, and total revenues (minus Capital Outlay and FSPK funds) are the variables used to compute this statistic.

Table 30 shows the coefficient of variation by wealth quintile for 1989-90 through 1995-96. An examination of the data reveals that the coefficient of variation for local revenue decreased from .771 in 1989-90 to .551 in 1995-96, state revenue increased from .057 to .155, and total revenue decreased from .166 to .112. **Additionally, Table 30 shows the that coefficient of variation for state/local revenue (i.e., the SEEK program) decreased from .196 in 1989-90 to .105 in 1995-96. The coefficient of variation has decreased by 46.4 percent, which indicates improvement in horizontal equity caused by the SEEK program.** Figure 20 illustrates the coefficient of variation for state/local revenue from 1989-90 to 1995-96.

**FIGURE 20**

**COEFFICIENT OF VARIATION  
STATE/LOCAL REVENUE**

Summary. As indicated previously, the Supreme Court's decision neither identifies nor mandates the criteria for ascertaining the equity of the state's school finance system. It does, however, infer the need to see that revenues are distributed fairly among Kentucky's children. Thus, the principle of horizontal equity was selected as the standard to guide the analyses described previously in this report. The SEEK program's coefficient of variation (horizontal equity) measure has decreased by 46.4 percent from .196 in 1989-90 to .105 in 1995-96. Since a coefficient of variation of 0 represents perfect horizontal equity, the SEEK program demonstrates positive improvement towards meeting the goal of "equal treatment of equals."

The state's previous school finance system distributed state funds with no regard for property wealth variation among school districts. The SEEK program has corrected this problem. It makes state revenues sensitive to a school district's property wealth. Figures 21 and 22 illustrate the distribution of state funds in 1989-90 (prior to SEEK) and 1995-96 (SEEK's sixth year). Figure 22 clearly demonstrates more state revenue now flows to property poor school districts. Thus, accomplishing a major SEEK program goal, altering the distribution of state educational dollars among school districts.

**Local Districts.** A cornerstone of Kentucky's reform was to return significant decision making to local schools and school districts, including to a great extent how money is spent. This section provides a limited overview of district spending with attention to certified personnel expenditures. Salaries for personnel comprise more than 70 percent of local districts budgets. Table 31 shows two salary categories for certified personnel from 1989-90 through 1996-97: "185 day average salary" and "total average salary." It is important to note the total average salary category includes additional pay for extended days worked and additional duties performed by certified personnel.

Also, Table 31 illustrates certified personnel characteristics by wealth quintile. For example, in 1989-90 the "average 185 day salary" for the lowest wealth quintile was \$23,935 and \$29,100 for the highest wealth quintile. The difference between the lowest and highest wealth quintiles in 1989-90 was \$5165. In 1996-97 the average 185 day salary for the lowest wealth quintile was \$32,930 and \$36,004 for the highest wealth quintile. The difference between the lowest and highest wealth quintiles in 1996-97 was \$3074. The average 185 day salary for the lowest wealth quintile increased by 37.6 percent (\$8995) from 1989-90 to 1996-97. The average 185 day salary for the highest wealth quintile increased by 23.7 percent (\$6904) from 1989-90 to 1996-97.

FIGURE 21 1989-90 STATE FUNDS DISTRIBUTION (PRIOR TO SEEK)

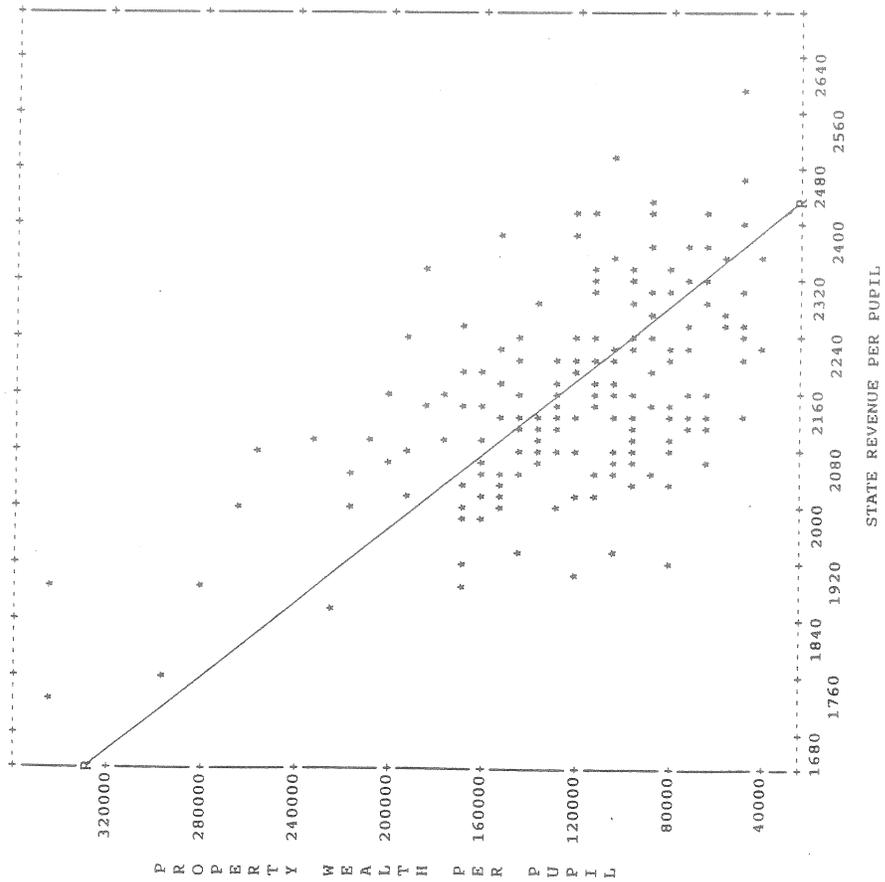

FIGURE 22 1995-96 STATE FUNDS DISTRIBUTION (SEEK'S 6TH YEAR)

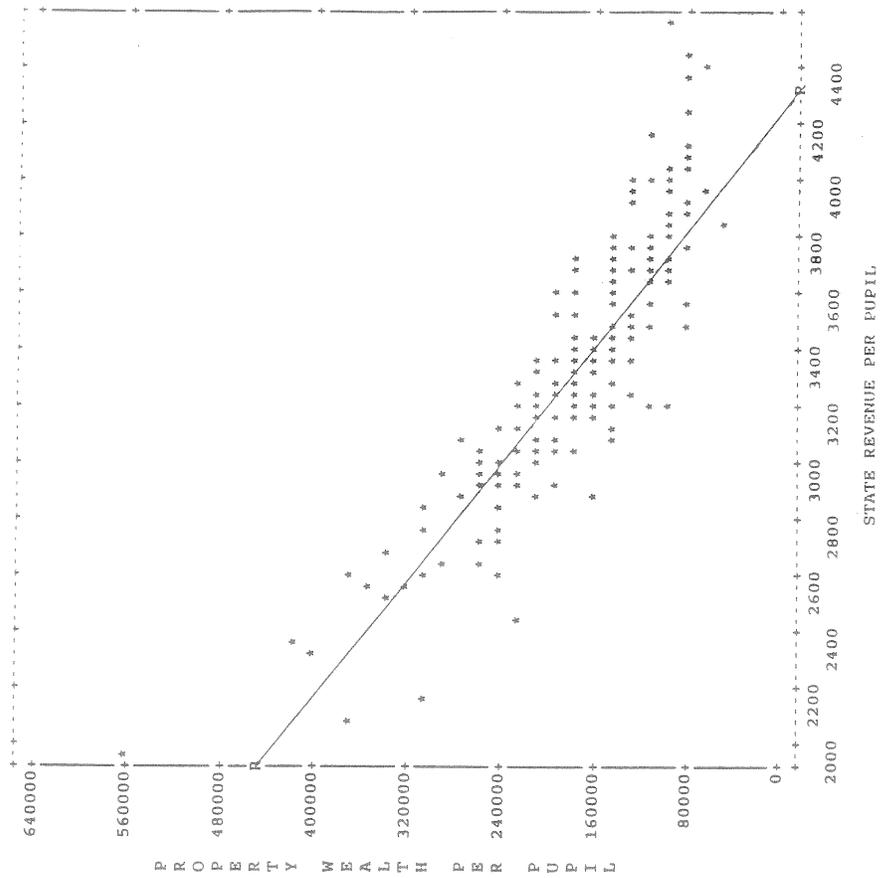

TABLE 31 PUPIL WEIGHTED AVERAGES FOR CERTIFIED PERSONNEL CHARACTERISTICS BY WEALTH QUINTILE

Quintile	Average Salary	Total Average Salary	Percent Rank 1	Percent Rank 2	Percent Rank 3

4	32,213	34,389	32.02%	49.87%	18.11%
5	35,025	37,364	30.60%	52.89%	16.51%
<b>Statewide</b>	<b>\$32,308</b>	<b>\$34,459</b>	<b>33.22%</b>	<b>47.56%</b>	<b>19.22%</b>
<b>1995-96</b>					
1	\$31,893	\$33,877	33.63%	43.84%	22.53%
2	31,910	34,142	34.88%	45.87%	19.25%
3	32,184	34,378	33.64%	46.16%	20.21%
4	32,558	34,835	30.89%	49.85%	19.26%
5	35,368	37,794	30.44%	52.46%	17.11%
<b>Statewide</b>	<b>\$32,808</b>	<b>\$35,032</b>	<b>32.69%</b>	<b>47.66%</b>	<b>19.65%</b>
<b>1996-97</b>					
1	\$32,930	\$34,985	34.54%	44.35%	21.43%
2	32,745	35,057	34.59%	46.57%	18.91%
3	33,116	35,391	33.69%	46.65%	19.96%
4	33,340	35,684	30.46%	50.52%	19.79%
5	36,004	38,423	30.32%	53.22%	17.47%
<b>Statewide</b>	<b>\$33,664</b>	<b>\$35,934</b>	<b>32.72%</b>	<b>48.29%</b>	<b>19.49%</b>

Additionally, the salary difference between the lowest and highest wealth quintiles was reduced by 40.5 percent (\$2091) from 1989-90 to 1996-97. Although the disparity reduction in the "average 185 day salary" category between the lowest and highest wealth quintiles since 1989-90 is encouraging, a significant difference remains.

Additionally, Table 31 shows that the "average total salary" in 1989-90 for the lowest wealth quintile was \$26,098 and \$31,239 for the highest wealth quintile. The difference between the lowest and highest wealth quintiles in 1989-90 was \$5141. In 1996-97 the average total salary for the lowest wealth quintile was \$34,985 and \$38,423 for the highest wealth quintile. The difference between the lowest and highest wealth quintiles in 1996-97 was \$3438. The average total salary for the lowest wealth quintile increased by 34.1 percent (\$8887) from 1989-90 to 1996-97. The average total salary for the highest wealth quintile increased by 23.0 percent (\$7184) from 1989-90 to 1996-97. Also, the salary difference between the lowest and highest wealth quintiles was reduced by 33.1 percent (\$1703) from 1989-90 to 1996-97. A significant difference, however, remains between the lowest and highest wealth quintiles in the "average total salary" category, even though the disparity reduction since 1989-90 is encouraging.

Table 31 contains data relative to the rank of certified personnel by wealth quintile for 1989-90 through 1996-97. Rank 3 personnel are those with a four-year college degree, Rank 2 requires a master's degree, while Rank 1 consists of those personnel with a master's degree plus an additional 30 hours of approved graduate work. While differences do exist among the wealth quintiles, it is interesting to note in 1996-97 the highest wealth quintile had the lowest percentage of Rank 1 personnel at 30.32 percent. An inverse relationship exists between the lowest and highest wealth quintiles when comparing Rank 2 personnel. Certified personnel in the highest wealth quintile are comprised of 53.22 percent Rank 2, while the lowest wealth quintile has 44.35 percent. Concerning Rank 3 personnel, the lowest wealth quintile has the highest percentage at 21.43 percent, while the highest wealth quintile has the lowest at 17.47 percent. The data presented in this table are based on information from KDE Professional Staff Data files (1989-90 through 1996-97).

Table 39 (Appendix E) shows the number of classroom teachers by district from 1989-90 through 1996-97. Also, Table 40 (Appendix E) illustrates the average classroom teachers salaries by district from 1989-90 through 1996-97. These tables demonstrate the changes that have occurred in each Kentucky school district concerning the number of teachers and the average salary paid since 1989-90.

## **Recommendations**

Since the passage of KERA in 1990, Kentucky has made significant progress toward the goal of educational equity for its school children. The SEEK formula has reduced the funding gap between rich and poor school districts by almost half.

However, in spite of this noteworthy achievement, other facets of the school finance system may require fine tuning. SCR 94 impaneled the Task Force on Public Education to report findings and recommendations on the status of elementary and secondary education in the Commonwealth. Three subcommittees were then formed to address these major areas: Assessment and Accountability, Teaching and Learning, and Finance and Management.

The Finance and Management Issues group, chaired by Representative Joe Barrows, conducted a series of public hearings directed toward the following school finance issues: 1) the SEEK funding formula and Strands; 2) average daily membership versus average daily attendance; 3) revenue and taxation; 4) professional compensation; 5) school facilities; 6) management of local school districts; and 7) technology.

As of this writing, recommendations for dealing with many of these issues are being finalized by the Finance and Management Issues group for presentation to the full task force in December 1997. It should be noted the four most prominently debated issues were addressed by the OEA in its previous three annual reports:

- Including KERA strands such as professional development, extended school services and preschool in the SEEK formula.
- Development of a Professional Compensation plan per KRS 157.390(7).
- Amend KRS 160.470 to permit school districts to levy a tax rate on real and personal property that will generate a 4 percent increase in local revenue.
- Use prior year assessment rather than current year in the calculation of the SEEK formula.

# *TECHNOLOGY*

## TECHNOLOGY

**Overview.** Much has been written lately about the proliferation of technology in the Nation's schools and classrooms. According to a report issued by the Policy Information Center of the Educational Testing Service in Princeton, New Jersey, "there are 4.4 million computers in America's classrooms, with the typical school owning between 21 and 50." The authors also indicate that the "ratio of students to computers has declined from 125 students per computer in 1984 to the current ratio of 10 students per computer" and falling.

Also, according to the Testing Service publication, "Computers and Classrooms," the ratio of students to computers "decreases as the grade level increases. Elementary schools have a ratio of 11 to 1, middle/junior highs have a 9.7 to 1, and high schools have a ratio of 8.4 to 1."

Kentucky generally gets high marks in most national studies for its commitment of resources to educational technology. "Computers and Classrooms" rank Kentucky a little above the national average at 9.6 students per computer and slightly below the national average in students per multimedia computers. We also fall below the national average when it comes to the percentage of schools (50 percent) with internet access. Kentucky fairs better than the national average in percentage of schools (48 percent) with Local Area Networks, satellite technology (49 percent), and training (28 percent) for its teachers (at least 9 hours). To see how Kentucky compares to the other 49 states in these categories, see Appendix F.

These are certainly impressive numbers as Kentucky gears up for the challenges of the 21st century. On the other hand, there is much yet to be done if we are to accomplish our goal of one computer for every six students in attendance.

*Kentucky Education Technology System.* (KETS) In response to a written request by the Office of Education Accountability (OEA), the Office of Education Technology, Kentucky Department of Education (KDE), provided the following progress report regarding the 1996-97 KETS implementation plan.

## KENTUCKY EDUCATION TECHNOLOGY SYSTEM

### Status Prepared for School Facilities Construction Commission

The Kentucky Education Technology System (KETS), as the technology strand of the 1990 Education Reform Act, is deploying voice, video, and data technology to each of the Commonwealth's 37,900 pre-school through grade 12 public school classrooms to increase student performance and school success. Implementation of KETS is guided by the Master Plan for Education Technology under the authority of the Kentucky Board of Education. Originally issued in 1992, the Master Plan was updated in October 1996 and is available on the Web at <http://www.kde.state.ky.us/edtech/content.html>.

Those impacted directly by this initiative are:

- 572,930 students enrolled in the P - 12 public school system;
- 39,056 teachers;
- 1,388 schools and school staff;
- 176 district offices and staff; and,
- 69 secondary vocational education schools, 700 Family Resource/Youth Services Centers, 8 Regional Service Centers, and the Department of Education.

The objective of the Kentucky Education Technology System is to deploy:

- One high-performance, networked computer for every six students
- One high-performance, networked computer for every teacher
- Four to six active network connections in every classroom
- A cordless phone in every classroom and video in every classroom
- A full-function local area network in every school
- Instructional software available to everyone from the network
- A direct, high speed connection from every school to the Information Highway
- A direct, high speed connection from every district to the Information Highway

EQUITY Statewide equity is the most unique and rigorous principle guiding Kentucky's education technology initiative. Equity means:

- Equal access to funds;
- Equal access to resources (networking, materials, training, and support);
- Equal buying power; and,
- Equal access to learning opportunity through technology.

To the computing and communications industries, for instance, Kentucky schools are one customer and schools pay the same price regardless of quantity. Typically, KETS contracts for instructional software result in an 80 - 90% discount off standard educational pricing; for hardware, discounts average 50 - 60% off standard educational pricing. All contracts include the same level of support regardless of where the customer is located.

Equity provisions are working in Kentucky. The technology disparity among the highest and lowest income districts is closing rapidly and approaching zero. Nationally, high income districts have an average of nine to ten times more technology than low income districts.

Kentucky Education Technology System Summary  
Page I  
6/20/97

## PROGRESS

Connection of Kentucky's schools to the Information Highway is a highly strategic component of the reform initiative. In August 1995, Kentucky completed the last links to bring 100% of her school districts online. All 176 district offices are now directly connected to the Information Highway, use a standard set of office and communications services, participate in the statewide electronic mail system, and have unlimited access to the Internet. The district office connection functions as the hub for connection of all the schools in the district.

Technology deployment in the school and classrooms is proceeding as follows:

	<u>June 92</u>	<u>June 95</u>	<u>Jan 97</u>
KETS-standard student workstations per students	1:154	1:12	1:8
KETS-standard teacher workstations per teacher	1:28	1:4	1:3
Classrooms with High, Speed Access to Info Highway	1%	21%	55%
Districts with unlimited, local access Internet and Email	0%	45%	100%
Classrooms with Broadcast Educational Video	89%	100%	100%
Districts with Interactive Video Sites	0%	14%	45%
Schools/Districts with Technology Coordinators	1%	100%	100%
Student Technology Leadership Programs	0	300	480

## THE INVESTMENT

The Kentucky Education Technology Program is funded through a combination of state and local funds. Every two years, the General Assembly appropriates funds to a statutorily authorized, non-lapsing trust fund. To gain access to these funds, districts must establish and maintain a district-wide technology plan and must secure certification from the Kentucky Board of Education each year that they have an existing unmet need for education technology. Based on those qualifications, districts receive an annual allocation per Average Daily Attendance which they must match dollar for dollar. Districts are, in fact, matching on an average of \$1.80 in capital expenditure for every \$1.00 the state invests.

Total investment, 1992 - 1997, is as follows:

- \$79.5 M in state funds to the matching program
- \$79.5 M in local funds to the matching program
- \$35.0 M in local funds above the required match
- \$35.6 M spend directly from the state level

The total cost of Master Plan implementation was estimated in 1993 to be \$560 million. Due to cost reduction and avoidance policies, proactive management of procurement strategies, and industry pricing trends, the total cost of the same plan was revised in 1996 to be just over \$422 million.

### 1997/98 Implementation Plan

From a total appropriation of \$20M, \$14M will be issued as Offers of Assistance which will generate at least \$28M in technology spending in the schools. The offer per Average Daily Attendance will be about \$24 as compared to \$21 for the first year of the biennium.

In June 1997, the Kentucky Board of Education (KBE) also approved the 1997-98 KETS Implementation plan (Appendix F) which is the fifth year of the five year program envisioned in the KETS Master Plan. Following are highlights of the plan:

- An increase in offers of assistance from \$12,000,000 to \$14,000,000 to schools or roughly \$24 per child in average daily attendance (ADA).
- Integration of technology planning into the consolidated Planning process.
- Continued development of the cadre of technology leaders throughout the Commonwealth.
- Continued commitment of support to the existing network and maintenance of current service levels.
- Utilization of proposed new funding for networking and internet wiring via the Telecommunications act and the Universal Service fund. Districts could begin receiving cost discounts as early as next spring.
- Continued implementation of MUNIS and other components of the District Administrative System (DAS) through 1997-98.

Also, in October 1997, the Office of Education Technology submitted to KBE a bimonthly status report to communicate its progress toward implementation plan of the 1997-98 (Appendix F).

Technology Survey. During the course of the 17 monitoring visits conducted this past school year, staff surveyed District Technology Coordinators (DTC), School Technology Coordinators (STC), and elementary, middle, and high school teachers regarding the use of technology in their schools and classrooms. This report is based on the results of that survey.

The districts selected for the survey comprise 118 schools with a combined average ADA of 68,692.4. Of the 660 surveys distributed, 558 were returned; a return rate of 84.5 percent. Some survey forms were disregarded due to improper or ambiguous responses.

District Technology Survey. The district technology survey was distributed to DTCs in each of the 17 districts with a 100 percent return. The survey instrument and aggregated responses can be found in Appendix F.

The DTCs reported 10,050 computers currently deployed in their districts. Of the 17 DTCs reporting, only 10 (58.8 percent) worked full-time in their position. All but one of the 17 DTCs rated the computer software currently being used in their district's classrooms good to excellent as

a tool to improve instruction. Fourteen of the seventeen (82 percent) respondents rated current software good to excellent in its compatibility with Kentucky's Curriculum Framework. Of those surveyed, 88 percent rated the quality of Professional Development in the area of technology as good. All DTCs considered their experience with KETS program to be good.

School Technology Coordinator Survey. Surveys were returned by 103 (87.3 percent) STCs out of 118 distributed. The STCs reported 7179 computers available to students and teachers in their schools.

Classroom Teacher Survey. Of the 525 surveys distributed to elementary, middle, and high school teachers, 438 were returned or 83.4 percent. Classroom teachers reported 1361.4 student workstations and 793 teacher workstations in use in their classrooms. Teachers surveyed also reported 151 phones available in the classroom (34.5 percent), 338 VCRs (77.2 percent), 92 Videodiscs (21 percent) and 202 CD-Rom outlets (46.1 percent). Of those reporting only 99 or 22.6 percent had access to the Internet. Teachers also reported that technology is available to 72 percent of their students as part of their everyday classwork. Also, 87 percent of respondents reported using technology routinely for instruction. On the other hand only 37 percent of classroom teachers could exchange ideas via e-mail in their buildings. Of those reporting, 58 percent used a computer in making lesson plans, while 50 percent used a computer for grade keeping and progress reports. Only 14 percent of respondents reported using technology for classroom attendance and almost 73 percent reported their students had access to a computer lab on at least a weekly basis.

Finally, in answer to a question concerning the types of skills being developed through use of instructional software programs, the most frequent responses included: keyboarding, word processing skills, introduction to web-browsing, problem-solving, basic math and writing skills, and reading comprehension in elementary schools; keyboarding, problem solving, word processing, portfolio development, research skills, reading comprehensive, and presentations (Power Point) in middle schools; and accounting, graphs, resume preparation, word processing, spreadsheets, and data bases in the high schools.

Summary. Because the sample is so small (17 districts, 118 schools) it is difficult to draw solid conclusions from the survey results. However, one can be encouraged by the fact a significant number of teachers are using technology routinely for lesson plans, grading, and classroom instruction. While much of the computerized instruction still occurs in computer labs, particularly

at the secondary level, some evidence exists that technology may now be finding its way into the classroom.

### **Recommendations**

1. Provide more funding for routine maintenance and trouble-shooting or at least reserve a portion of Kentucky Educational Technology System funds for that purpose. (Not permitted under current regulation.)
2. Increase school districts' share of the state appropriation for KETS. (Of the \$20,000,000 appropriate for FY 1998 school districts are scheduled to receive only 70 percent or \$14,000,000.)
3. Improve effectiveness of the regional service centers by allocating more technical staff to technology. (Apparently some regional service centers staff are being redirected into the Distinguished Educator program which greatly reduces technical assistance to school districts.)
4. Reduce redtape associated with purchasing off state price contract. (District Technology Coordinators say it sometimes takes weeks to receive an order; also, they could save a lot of time if purchase requests could be handled directly with Frankfort instead of going through the regional service centers.

School/Classroom:  
District Name:

### Classroom Observation of KERA Learning Goals and Academic Expectations

A=YES                      B=NO                      C=NOT OBSERVED  
(circle the most appropriate response)

1. Is the content focus directly related to at least one of Kentucky's Learning Goals?                      A   B   C
2. Is there evidence that the lesson is directly related to at least one Academic Expectation?                      A   B   C
3. Is the lesson textbook driven?                      A   B   C
4. Are the instructional strategies designed to elicit interactive student participation?                      A   B   C
5. Does the lesson involve the use of a computer?                      A   B   C
6. Does the lesson require the use of other technology?                      A   B   C
7. Did the lesson involve writing through either open-response items, portfolios, or on-demand writing?                      A   B   C
8. Was there evidence of integration of subject matter?                      A   B   C
9. Was there any evidence of authentic assessment (teachers evaluating students within the context of daily activities and documenting strengths and weaknesses)?                      A   B   C
10. Are the students aware of expected levels of performance through rubrics or standards?                      A   B   C
11. Is the lesson plan rich in content as well as engaging, requiring higher-level thinking and problem-solving?                      A   B   C
12. Is the lesson developmentally appropriate for the age of the students? (At the elementary level)                      A   B   C

13. Is the role of the teacher one of a facilitator that invites interaction by motivating, challenging, encouraging, inviting reflection, and giving feedback? A B C
14. Was there evidence of cooperative learning? A B C
15. Was there evidence of usage of TRANSFORMATIONS--Ky's Curriculum Frameworks? A B C
16. Was there evidence of usage of CORE CONTENT? A B C
17. Is there evidence of multiple-choice test usage? A B C
18. Could the classroom be categorized as one which espouses performance assessment as required by KIRIS? A B C
19. Is there any evidence of "curriculum narrowing" to accommodate a certain grade's test preparation? A B C
20. Was there evaluation and reflection on the skills or concepts covered? A B C

Exit Interview Questions:

1. Which of the following best describes your classroom in terms of the delivery of a performance-based curriculum:
- \_\_\_\_\_ A. I have totally made the transition to a performance-based curriculum.
- \_\_\_\_\_ B. I am in the process of making the transition, but need more support and training.
- \_\_\_\_\_ C. I am only beginning to make the transition.

*On what basis do you make this claim?*

# Kentucky General Assembly

## Office of Education Accountability

Kenneth J. Henry, Ed.D.  
Director, OEA  
Deputy Director, LRC

015 Capitol Annex  
Frankfort, Kentucky 40601

Dear Superintendent:

As you are aware, the Office of Education Accountability, Division of Program Review/Oversight, annually conducts monitoring visits in school districts across the Commonwealth. These visits are an opportunity for OEA staff to meet with local school administrators and teachers, as well as for us to observe KERA implementation. Much of the information we gather on these visits is published in our annual report in an aggregated format.

For the 1997-98 school year, our staff have selected a sample of school districts for review. Your district is included. **The visit is scheduled for \_\_\_\_\_.**

Our review will include classroom observations, as well as interviews with school council members and other staff. We would like to meet with you and central office staff to review our plans and gather comments regarding KERA Initiatives. However, we will not need your staff to accompany us nor adjust their already busy schedules to accommodate school visits.

We would like to have the requested information available for pickup during our visit. If you have any questions, please do not hesitate to contact our office at 1-800-242-0520. We look forward to meeting with you and your staff.

Sincerely,

Kenneth J. Henry, Ed.D., Director  
Office of Education Accountability

sm

Enclosure

**OFFICE OF EDUCATION ACCOUNTABILITY  
1997-98 MONITORING VISITS**

In order for representatives from the Office of Education Accountability to complete the district monitoring visit, we would like for the following information to be prepared for pickup during the visit to the district:

1. A copy of the 1996-97 Annual Performance Report.
2. District transformation plan. (if applicable)
3. Copy of district professional development plan.
4. Copy of each schools professional development plan.
5. Copy of the district minority recruitment plan.
  - A. Total number of teachers \_\_\_\_\_ and administrators \_\_\_\_\_ in district.
  - B. Number of minority teachers \_\_\_\_\_ and administrators \_\_\_\_\_ in district.
  - C. What curriculum initiative is the district undertaking to build multicultural awareness?
6. Copy of master schedule and bell schedule for all schools.
7. Copy of December child count.
8. Copy of local board of education school-based decision making policy.
9. Copies of three (3) most recent minutes of council meetings for each council within the district.
10. List each schools current council membership and home mailing addresses.
11. Current enrollment number at each grade level (P-12) in extended school services.
12. Number of home school students registered in district:  
  
\_\_\_\_\_ 1996-97  
\_\_\_\_\_ 1997-98
13. Copy of local Board of Education staffing policy for certified and classified personnel.
14. Map of district showing where all schools are located.

15. A copy of the district's school calendar.
16. Please list with specificity the Professional Development attended by special education staff during the last three years related to integrating the core curriculum and IEPs. If presentation outlines or other documentation of the content is available, please provide copies.

### TECHNOLOGY ITEMS

1. Skills developed through using instructional software programs.

#### *Elementary Schools*

- A.
- B.
- C.
- D.
- E.

#### *Junior High/Middle Schools*

- A.
- B.
- C.
- D.

## Kentucky Preschool Allocation Formula Preschool Per-Child Allocation State Contribution

COMPONENT	AT-RISK INCOME ELIGIBLE 4'S WITHOUT DISABILITIES	SPEECH ONLY	DISABILITIES (3's and 4's)  DEVELOP. DELAY	SEVERE
<u>Instructional Subtotal:</u>  To provide a half-day program (half the 1992-93 SEEK basic grant of \$2,420), plus a Class-Size Factor and an At-Risk/ Disability Support Factor	\$1,815	\$1,889	\$2,420	\$3,205
<u>Social/Health Add-on:</u>  To provide related services beyond the basic instructional program	\$ 210	\$ 252	\$420	\$693
<u>Transportation Add-on:</u>  To assist in operational costs, particularly bus monitors and special needs	\$ 260	\$ 260	\$ 260	\$1,300
<b>STATE CONTRIBUTION 1992-1995</b>	\$2,025 no transportation \$2,285 with transportation	\$2,401	\$3,100	\$5,198
<b>STATE CONTRIBUTION 1995-96 (Reduced)</b>	\$1,936 no transportation \$2,182 with transportation	\$2,293	\$2,961	\$4,964
<b>STATE CONTRIBUTION 1996-97 (Reduced)</b>	\$1,910 no transportation \$2,170 with transportation	\$2,280	\$2,945	\$4,938
<b>STATE CONTRIBUTION 1997-98 (Increased but not to 1992-95 level)</b>	\$1,946 no transportation \$2,206 with transportation	\$2,319	\$2,993	\$5,016

## PRESCHOOL STATE-FUNDED ENROLLMENT LEGEND

ATR ONLY	=	Free lunch eligible 4-year olds without disabilities enrolled on 12-1-96
SPL	=	3- or 4-year-olds with speech/language disability enrolled on 12-1-96
DD	=	3- or 4-year-olds with developmental delays or other categories of mild to moderate disabilities enrolled on 12-1-96
SEV	=	3- or 4-year-olds with categories of severe disabilities enrolled on 12-1-96
TOTAL DISAB	=	All disabled children enrolled on 12-1-96 (SPL+DD+SEV)
TOTAL KERA	=	All children enrolled on 12-1-96 (ATR ONLY+SPL+DD+SEV)
SUPPL3's	=	Disabled children turning 3 and enrolled after 12-1-96 (estimate; Spring 1997 figures)
TOTAL ATR 4's	=	Includes free lunch eligible 4's without disabilities, as well as free-lunch 4's with disabilities who are reported in the disability count
TOTAL KERA 4's	=	All at-risk and disabled 4's enrolled on 12-1-96
DISAB 3's	=	All disabled 3-year-olds enrolled on 12-1-96 (does not include those with late birthdays enrolled after 12-1-96)
TOTAL 3's	=	All disabled 3's enrolled on or after 12-1-96 (DISAB 3's + SUPPL 3's)
OTHERS	=	Other preschool children enrolled 12-1-96, but not funded through KERA, Head Start or PACE
TOTAL CHILDREN	=	All KERA-funded children plus others not in Head Start or PACE (TOTAL KERA+SUPPL 3's+OTHERS)

UNIVERSITY OF KENTUCKY PRESCHOOL PROGRAM ANNUAL STUDY  
EXECUTIVE SUMMARY

The Kentucky Preschool Evaluation Project focused on the following five objectives during the 1996-97 school year.

**Objective One:** To assess the developmental levels of children entering Kentucky's preschool programs.

- What skills do children have when they enter the preschool program? Are there any differences between the low-income children and other four-year-old children? Are the low-income children actually behind in skills?

Children who are at risk as a result of poverty enter the preschool program with weaker skills than their peers from higher income families across the following areas: personal-social, adaptive, gross motor, fine motor, receptive communication, expressive communication, and cognition. Children from low-income families enter the preschool program with lower skills across all developmental areas, confirming their need for the program. Their largest gaps are in the areas of receptive communication and cognition. In terms of social skills and literacy skills, children from tuition-paying families scored highest, followed by children from low-income families, followed by children with disabilities.

- Do the children who are reported to have disabilities have real disabilities? Do districts serve children who do not have real delays?

Data confirm that children who enter the program with identified developmental delays, speech delays, and severe disabilities do indeed demonstrate delays and disabilities across developmental areas.

- Have there been any changes in the abilities of children? Are we serving the same types of children from year-to-year?

Based on our data, the program appears to be serving the same types of children from year-to-year. While our data across the years suggest that the children in more recent years are more delayed, that may be due to the fact that we have started testing them earlier in the academic year making them developmentally younger.

**Objective Two:** To study the impact of the preschool programs by examining children's readiness for P-1 (Kindergarten) and their language skills.

- What is the general readiness of "typical" five-year-old children starting school in Kentucky?

Overall, entering P-1 non-eligible children and preschool program participants demonstrate appropriate social and academic skills according to teacher ratings.

- What level of skills do the low-income children have when they leave preschool and start school?

Children who participate in the program catch up to their non-eligible peers according to teacher ratings of academic skills and language screening.

- Does the preschool program make a difference in school readiness for the low-income children?

The effectiveness of the preschool program was clearly demonstrated by teacher-rated readiness skills. There were no statistical differences between teacher ratings of low-income participants and non-eligible children (those who were not at-risk). Children who were eligible but who did not attend the program were rated significantly lower than low-income participants. The same pattern was found regarding children's social and behavioral readiness. There was no statistical differences between participants and children from the non-eligible group. However, the participants were rated higher than children from the eligible group.

- Do children make better gains in the program in some skills than in others? Are there skill areas where the preschool programs need to focus more attention?

The initial gains of participants appear to persist over time. The social and academic skills of over 1600 children (from P-1 to P-5) were rated by their teachers and parents. Scores demonstrate that former participants continue to do as well (in the eyes of their teachers and their parents) socially and academically as their non-eligible peers.

- Are there any differences in the groups as they get older?

The social and academic skills of children who are being followed are changing very little from group to group.

- Are there benefits in better attendance?

Teachers rate the social and academic skills of children with better attendance records more highly.

- Are there fewer referrals for special education services for low-income children who have participated in the program?

Special education referrals of participants are somewhat higher than their non-eligible peers at P-1, P-2, and P-3. Children who are at-risk continue to need additional school support. By third and fourth grade, fewer children who participated in the program are being referred to special education services.

**Objective Four:** To examine relationships between program quality and student outcomes.

- How well is the program being implemented? Is program quality consistent across the state?

A review of previous reports reveal that program quality has been found to be of high quality and fairly uniform across the twenty-four participating sites.

- Are there program areas where quality needs to be improved?

Low language and cognition scores continue to be areas of concern. Thus, programs should focus more systematically on activities that promote and facilitate language and cognitive skills.

- What program characteristics produce better results for children?

Numerous analyses of this year's data did not reveal specific program components which result in strong child outcomes. However, this may be due to the fact that there was little variability in quality across programs. The 1997-98 analysis is designed to identify possible factors related to children's progress, such as the quality of teacher-child interactions, school characteristics (such as family literacy involvement) and family factors (such as values and goals).

## REGIONAL SERVICE CENTERS

### REGION 1

Doralyn Lanier, Director  
Murray State University  
205 Stewart Stadium  
1 Murray Street  
Post Office Box 9  
Murray, KY 42071-0009  
Phone: (502) 762-3217  
Fax: (502) 762-3216

### REGION 3

Shirley Anderson, Director  
JCPS/Gheens Academy  
4425 Preston Highway  
Louisville, KY 40213  
Phone: (502) 485-3931  
Fax: (502) 485-3724

### REGION 5

Susan Nichols, Director  
University of Kentucky  
Alumni Gym Complex, Room 6  
Corner of Limestone & Euclid  
Lexington, KY 40506-0029  
Phone: (606) 257-4907  
Fax: (606) 323-2802

### REGION 7

Karen Hamilton, Director  
Morehead State University  
Post Office Box 1373  
150 University Boulevard  
Morehead, KY 40351-1689  
Phone: (606) 783-5372  
Fax: (606) 783-5375

### REGION 2

Jamie Key, Director  
Western Kentucky University  
113 Jones-Jaggers Hall  
325 University Boulevard  
Bowling Green, KY 42101  
Phone: (502) 745-6550  
Fax: (502) 745-6503

### REGION 4

Joyce Winburn, Director  
Northern Kentucky University  
Covington Campus  
1401 Dixie Highway  
Covington, KY 41011  
Phone: (606) 572-6930 or 6936  
Fax: (606) 572-6392

### REGION 6

Gary Perkins, Director  
529 Masters Street  
Corbin, KY 40701  
Phone: (606) 523-9821  
Fax: (606) 528-0847

### REGION 8

Carol Stumbo, Director  
100 Resource Drive, Suite A  
Prestonsburg, KY 41653  
Phone: (606) 886-0205  
Fax: (606) 886-1509

**OFFICE OF EDUCATION ACCOUNTABILITY  
PROJECT REPORT**

**Principals Selected by SBDM Councils  
1997-98 School Year**

**BACKGROUND**

There are currently 1184 schools participating in the school-based decision making (SBDM) process. One of the most important responsibilities faced by school councils is the selection of a principal to fill a vacancy. To date, approximately 700 schools have performed this task.

**PURPOSE**

Each year the Office of Education Accountability conducts a study to determine the effectiveness of the principal selection process. This project represents an effort to gather quantitative and qualitative data for policy makers and training providers at the local, regional, and state level.

To accomplish this task, OEA staff developed a 17-item questionnaire and selected either a teacher or parent council member from each of the 183 SBDM schools involved in the principal selection process for the 1997-98 school year. Questionnaires were mailed to 114 teacher council members, and 69 parent council members. OEA received 53 completed questionnaires from teacher council members, and 32 completed questionnaires from parent council members. This represents a return rate of approximately 46 percent.

**SELECTION PROCEDURES**

- The district superintendent forwarded an average of 5.2 [REDACTED] applications to the council for consideration. Councils interviewed an average of 3.4 [REDACTED] of these applicants.
- Fifteen of the 85 councils reported receiving minority (gender not included as minority) applicants. Twelve out of the 15 councils chose to interview minority applicants.

- Twenty-seven of the 85 councils involved in the selection process, requested additional applicants from the central office. Seventy-nine councils selected a permanent principal and in six situations, interim appointments were made.

One purpose of the survey was to ascertain the degree to which assistance was provided to councils in the principal selection process. Fifty-three of the councils reported having received specific training in the principal selection process. Fifty-nine of the councils reporting received technical assistance from the central office. The types of assistance provided included: training, answering questions, setting up and assisting in the interviews, reviewing applications, or merely providing a setting for the interviews to take place.

Twenty councils sought assistance from the Kentucky Department of Education, Division of School-Based Decision Making and/or their local Regional Service Center. Eighty councils reported to have involved other parents and teachers by means of surveying them for their opinion, forming committees, and through open forums. Seventy-six councils reported they were able to complete the process without encountering any type of interference.

Sixty two councils reported reaching the final decision by consensus with the remaining 23 deciding by vote. Three-fourths of the 85 councils reported that the process works well. The remaining councils indicated that more training and assistance is needed. Councils members indicated they had spent an average of 16 hours on the principal selection process.

## SUMMARY

The selection of a principal is one of the most important responsibilities undertaken by councils, and therefore is taken very seriously. This is evidenced by the number of hours council members are willing to commit to the comprehensive process of hiring a principal. In addition, most councils appear to recognize the need to seek assistance from some source. There also appears to be minimal interference in the process and most councils involve other parents and teachers in some manner.

**SCHOOL-BASED DECISION MAKING  
HIRING PROCESS OF PRINCIPALS  
QUESTIONNAIRE**

1. How long have you served on the council?
2. How many applicants did the superintendent initially send to the council?
3. Were any of the initial applicants minority (do not include gender)? If so, how many?
4. How many of the initial applicants were interviewed?
5. If applicable, were any of the minority applicants interviewed?
6. Did the council request additional applicants? If so, how many were sent?
7. Did the council ultimately select a permanent principal? If not, how was an interim selected?
8. Did the council receive training specifically on the principal selection process? If so, who provided training?
9. Did the council seek assistance from KDE or regional service center?
10. Did the central office provide assistance in any way? If so, in what manner?
11. In what way did the council involve other teachers and parents in the selection process?
12. Did the council encounter interference in the selection process? If so, by whom and in what manner?
13. Was the final decision reached by a council vote or by consensus?
14. What is your overall reaction for councils having the authority to select principals?
15. Are there any statutory changes that could make this process better?
16. Any general comments or areas of concerns with SBDM?
17. How many hours would you estimate were spent by you in this process?

Source: Education Week, *Quality Counts: A Report Card on the Condition of Public Education in the 50 States*, January 22, 1997

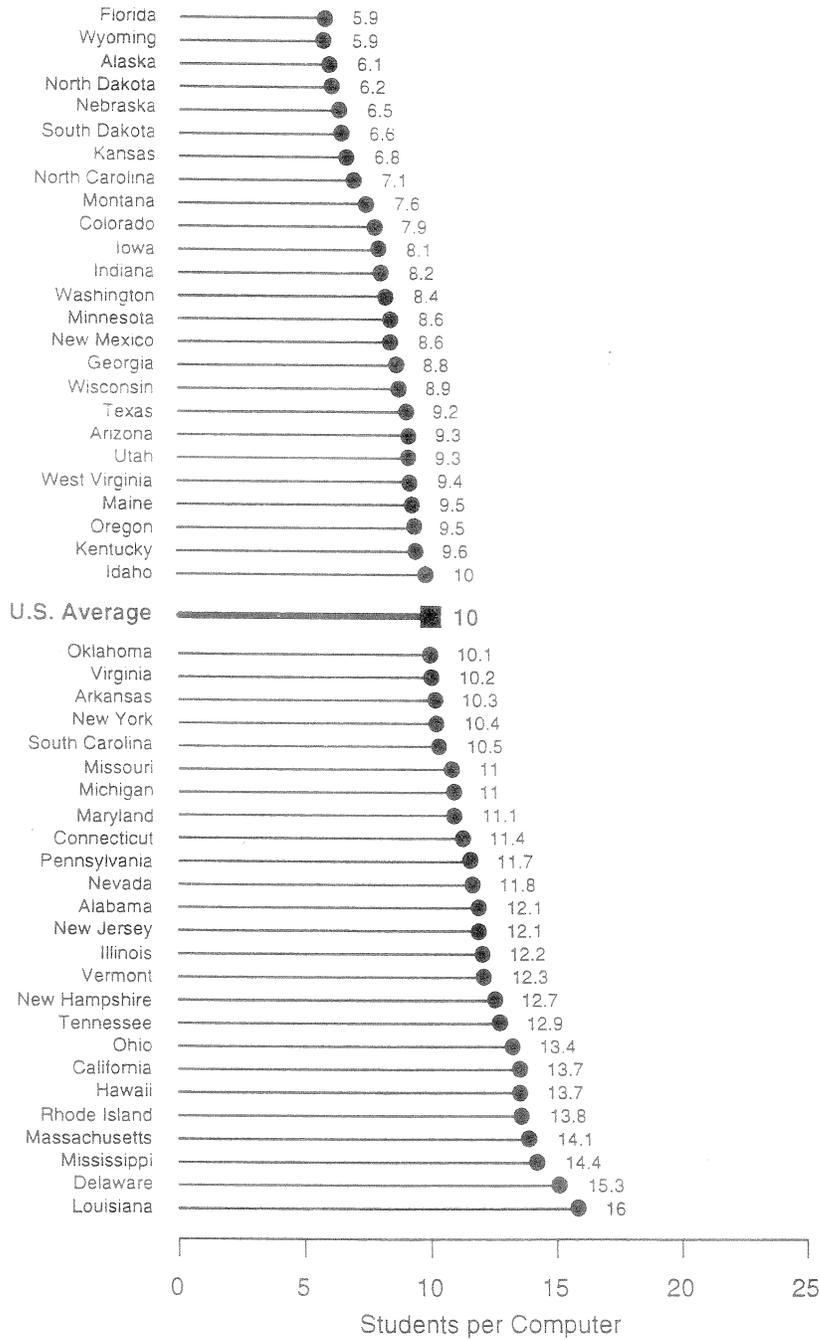

opportunities for teacher access to professional development through telecommunications.<sup>3</sup>

In 1995, the Office of Technology Assessment (OTA) conducted a comprehensive study of teachers and the effective use of technology in schools. The key findings of this study include:

- Most teachers have not had suitable training to prepare them to use technology in their teaching.
- In a majority of schools, there is no onsite support person officially assigned to coordinate or facilitate the use of technologies.
- To use technology effectively, teachers need more than just training about how to work the machines and technical support.
- Schools and school districts are using a number of different approaches for training teachers and implementing technology.
- Lessons from experienced implementation sites suggest that those who wish to invest in technology should plan to invest substantially in human resources.

**FIGURE 24**

**Figure 5: Number of Students per Computer, by State**

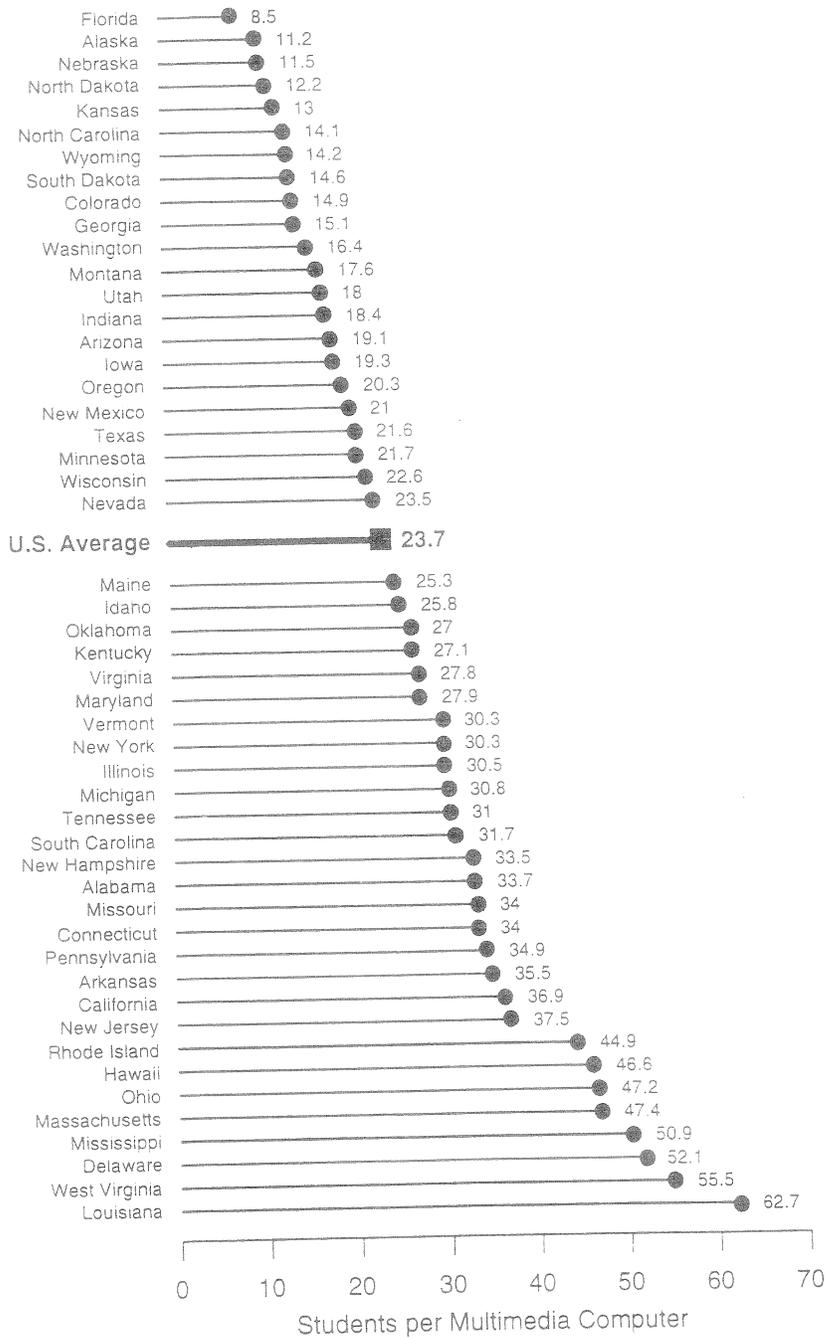

Source: QED, 1997.

This pattern of inequity is persistent in the data that will follow. Previous analyses have shown a positive relationship between the percentage of Title 1 students and computer availability.<sup>5</sup> The general trend was more technology in poorer schools. This no longer appears to be the case. While Title 1 funding is designed to help poor schools, these targeted resources are apparently ineffective in getting these schools up to par technologically with other schools. Since much of the technology that currently resides in poor schools is probably due to Title 1 funds, it is hard to imagine what the technology level in these schools would be like without this federal program.

Figure 5 shows the student-to-computer ratio for each state. While state averages can mask differences that exist among a state's school districts, averages can be useful in recognizing the differences that exist among the states. Florida, Wyoming, Alaska, North Dakota, Nebraska, South Dakota, and Kansas lead the states with about six students per computer, on average. At the other end, Massachusetts, Mississippi, Delaware, and Louisiana have student-to-computer ratios of 14 to one or more.

**FIGURE 25**

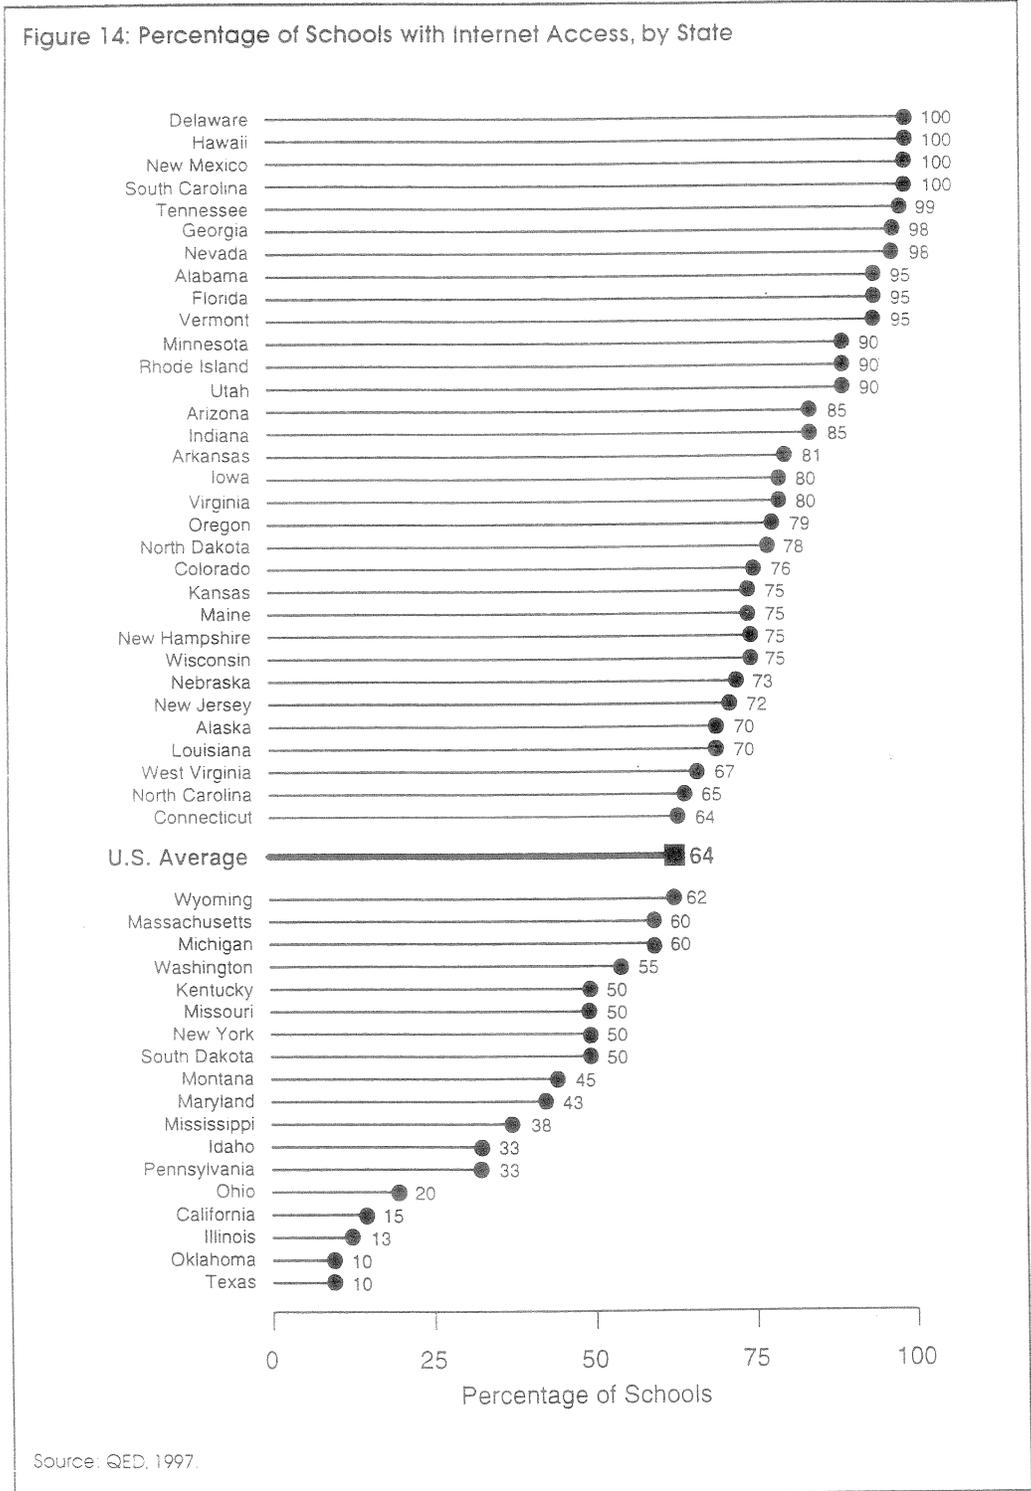

Figure 8: Number of Students per Multimedia Computer, by State

Source: QED, 1997.

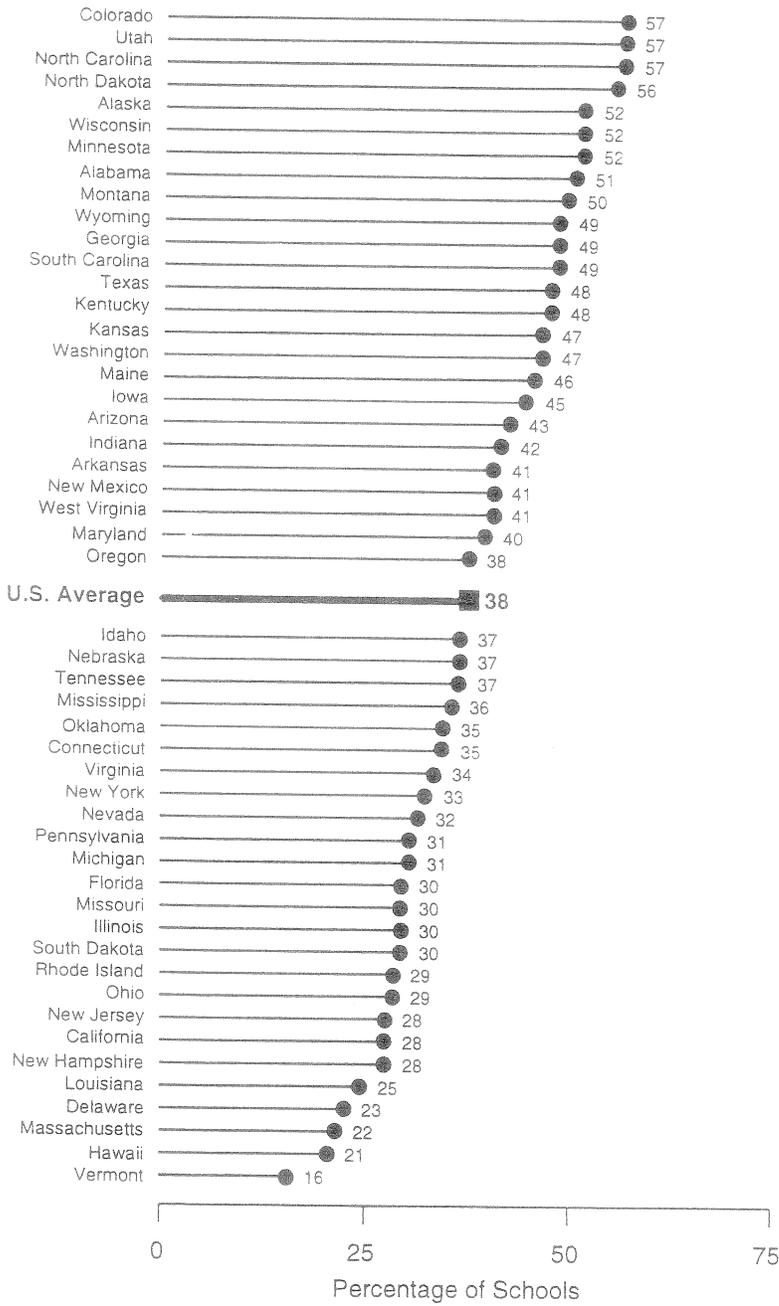

are large. Florida leads all states with a ratio of students to multimedia computers of 8.5 to one, compared to ratios of more than 50 to one in Mississippi, Delaware, West Virginia, and Louisiana.

**FIGURE 26**

**FIGURE 27**

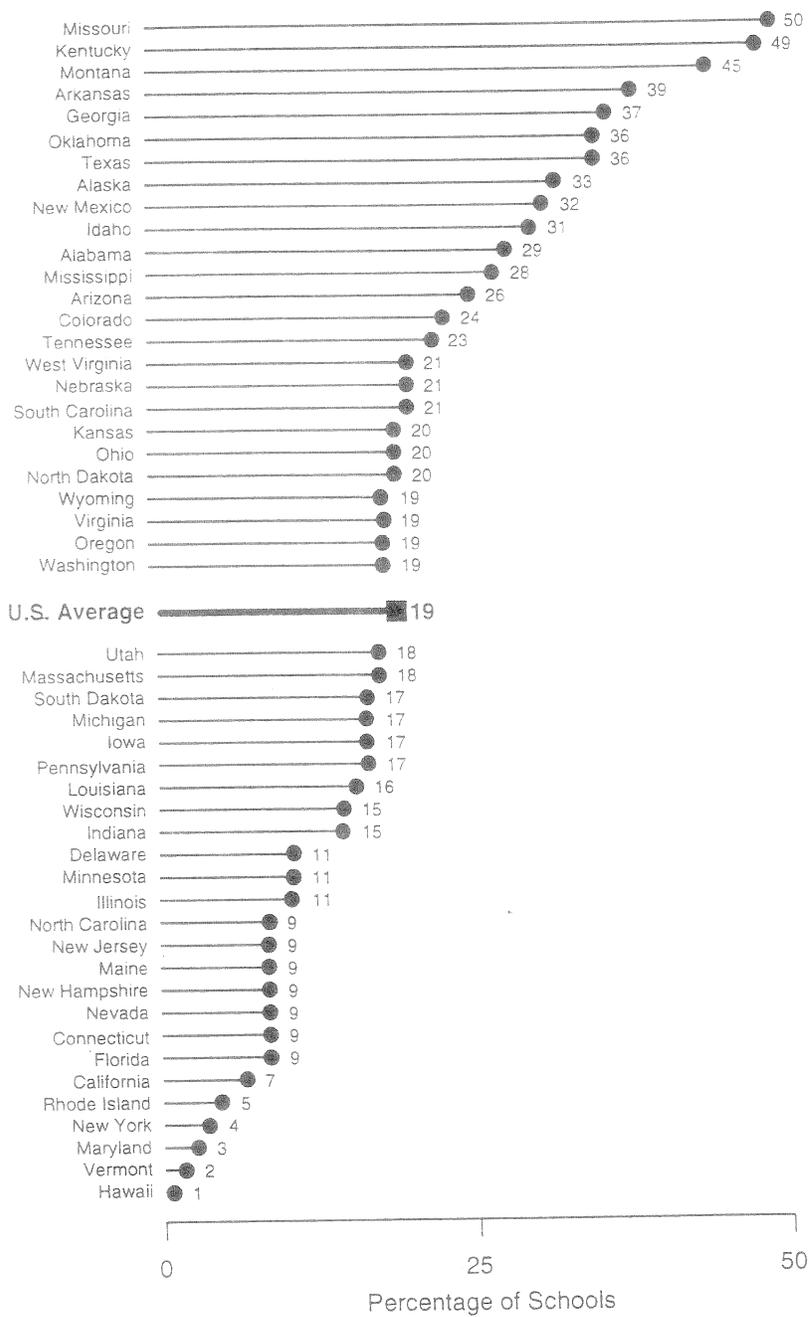

Figure 20: Percentage of Schools with Local Area Networks, by State

Source: QED, 1997.

**FIGURE 28**

Figure 26: Percentage of Schools with Satellite Technology, by State

Source: QED, 1997.

- 1 Most of the data in this section of the report is drawn from *Technology in Public Schools, 15th Edition: Installed Base Technology in U.S. Public Schools, Covering 1981-1996*. Denver, CO: Quality Education Data. This annual publication is a census study of public school ownership of educational technologies for student instruction. To order copies of the report, call QED at: 1-800-525-5811, email [qedinfo@qeddata.com](mailto:qedinfo@qeddata.com), or visit: <http://www.qeddata.com>.
- 2 There are some differences in the poverty and minority measures from one type of technology to another. For computers and multimedia computers, QED provides actual percentage groupings. For the other technologies, with the exception noted below, QED provides broader groupings of schools — poor, average, rich; and low, medium, and high minority. The data on Internet access are from two sources. The state data are from QED and the poverty and minority data are from the National Center for Education Statistics. For this measure, NCES defines poor students as those who are eligible for free or reduced-price lunch.
- 3 Thomas K. Glennan and Arthur Melmed, *Fostering the Use of Educational Technology: Elements of a National Strategy*, Santa Monica, CA: RAND, 1996.
- 4 U.S. Department of Education, *Getting America's Students Ready for the 21st Century: Meeting the Technology Literacy Challenge*, June 1996.
- 5 The state data on Internet access are from QED, 1997. The data for poor and minority students are from *Advanced Telecommunications in U.S. Public Elementary and Secondary Schools, Fall 1996*. U. S. Department of Education, National Center for Education Statistics, February 1997.

KENTUCKY DEPARTMENT OF EDUCATION

STAFF NOTE

Review Item:

1997/98 Kentucky Education Technology System (KETS) Implementation Plan

Applicable Statute or Regulation:

KRS 166.670  
KRS 156.690  
KRS 157.665

Background and Major Policy Implications:

The Education Technology Trust Fund is established in the Finance and Administration Cabinet by KRS 157.655(1) to provide education technology for the public school system. Funds are appropriated to the Trust Fund in each biennial budget. All interest earned on money in the fund is retained for reinvestment in the fund. All money credited to the fund, including interest, is to be used for education technology as defined by the Kentucky Board of Education in the Master Plan for Education Technology and does not lapse (KRS 157.665(2)).

Monies are drawn from the Trust Fund through the KETS Implementation Plan which is established annually on a fiscal year basis. The Implementation Plan establishes expenditure levels for the offers of assistance program as well as all Kentucky Education Technology System projects administered directly from the state level. All expenditures from the Fund require the approval of the Kentucky Board of Education (KRS 157.655(3)); this approval is accomplished through Board approval of the Implementation Plan.

**1997/98 Kentucky Education Technology Implementation Plan  
as presented to Kentucky Board of Education, June 1997  
Executive Summary**

The 1997/98 KETS Implementation Plan, as presented, reflects continuation of major objectives established by the Kentucky Board of Education in previous years. As those objectives are being attained, the focus of state-level spending in the plan is changing from one supporting massive, new statewide implementations to one which supports the operation and continuous improvement of programs in place. The majority of state-directed expenditures, for instance, are for professional services and operating costs rather than needs assessment, design, and capital investment. District spending remains focused on securing hardware, software, networking, and professional development to achieve KETS objectives. The 1997/98 year is the last year of the five years of Kentucky Education Technology System Implementation projected in the Master Plan.

**Projected Expenditures and Available Funds**

	Labor	Operating	Total
Project 01 - Issue Offers of Assistance	\$0	\$15,238,914	\$15,238,914
Project 02 - Instructional Technology & Prof. Devel.	\$383,241	\$424,900	\$808,141
Project 03 - Network Infrastructure and Management	\$1,603,697	\$2,772,000	\$4,375,697
Project 04 - Implementation of Administrative Systems	\$1,416,700	\$1,207,400	\$2,624,100
<b>TOTAL</b>	<b>\$3,403,637</b>	<b>\$19,643,214</b>	<b>\$23,046,851</b>

The general fund appropriation to the Education Technology Trust Fund for the 1997/98 fiscal year is \$20,000,000. There is approximately \$1,238,914 in escrow. The total interest accrued to the Trust Fund in the current fiscal year is an estimated \$400,000. The estimated carry forward from state directed expenditures is approximately \$1.4 m.

**Project Overview**

**Project 01- Issue Offers of Assistance**

- The amount issued to districts as Offers of Assistance is increased from \$12,000,000 to \$14,000,000 which will generate at least \$28,000,000 in new funds for technology. \$1,238,914 is being held in escrow for 14 districts.

**Project 02 - Instructional Technology, Professional Development, and Planning**

- Integration of technology planning into the Consolidated Planning process will ensure that planning for technology takes place within the context of instructional planning and will help districts identify all potential sources of funding for technology.
- The plan continues support of developing cadre of technology leaders at the school, district, and regional levels.

**Project 03 - Network Infrastructure, Management, and Operations**

- The plan supports the existing network and maintains current levels of service and quality as new locations come online.
- The FCC Rulings on implementation of the Telecommunications Act and the Universal Service Fund, as well as the Kentucky Public Service Commission's response to the FCC rulings, may have substantial impact on the cost of the statewide network, the district's ability to connect schools, and the school's ability to complete building-wide local area networks.

**Project 04 - Continue Implementation of the District Administrative Systems**

- All districts will be in some phase of implementation by the beginning of the 97/98 fiscal year; project resources are being phased out as applicable.
- Extensive support is still needed for those in the early phases of implementation; accounting support and advanced training are still needed by many districts.
- The project requires recurring costs for software licenses and maintenance.

1997/98 Kentucky Education Technology Implementation Plan  
as presented to  
Kentucky Board of Education  
for Discussion  
June 1997

**Project One: Issue Offers of Assistance to Local Districts**

Districts are eligible to receive Education Technology Trust Funds annually. The following must occur before a district receives funds: the district secures approval of the District Technology Plan Update; the Department secures Kentucky Board of Education approval of the amount to be offered to the district; the Department requests that the School Facilities Construction Commission issue the offer to the district; and the district secures local board approval of the offer and proof of deposit of matching funds into a local interest bearing account. At that time, funds are wired to the district.

	Labor	Operating	Total
1) <b>Issue Offers to Local Districts</b> FY 98 Offers will be approximately \$24.50, or about \$3.00 per ADA more than FY 97.	\$0	\$14,000,000	\$14,000,000
2) <b>Escrow from Previous Years</b> Districts may escrow funds for up to three years if they are unable to match all or any portion of an offer.	\$0	\$1,238,914	\$1,238,914
<b>Project 01 Totals</b>	<b>\$0</b>	<b>\$15,238,914</b>	<b>\$15,238,914</b>

**Project Two: Instructional Technology, Professional Development, and Planning**

Improving the instructional process in ways that foster higher levels of student achievement is the first priority of the Master Plan for Education Technology. Implicit within that priority is the need to prepare teachers and administrators to select and use technology effectively.

	Labor	Operating	Total
<p>1) <b>Manage Local District Planning and Certify Unmet Need</b>                      A significant activity for the upcoming year will be integration of the district technology plan into the new Consolidated Plan. Beginning with the FY 99 Offers, districts will no longer submit a separate funding application for Education Technology Trust Funds. Compliance with statutory requirements for reporting, review and accountability will be carried forward and integrated into the new planning process.</p>	\$50,000	\$0	\$50,000
<p>2) <b>Provide Professional Development to Teachers and Administrators</b>                      Professional development is carried out through a systemic train-the-trainer model based on peer support, cross-disciplinary collaboration, and the practical application of new skills. This project coordinates needs assessment, develops and/or secures programming, directly trains and supports cadre of instructional technology leaders at the school, district, and regional levels. The project also provides support the annual Kentucky Education Technology Conference. All of these groups will participate in district-based team training on integrating technologies to support instructional objectives. Specific deliverables and services for the various cadre are described below:</p>	\$134,071	\$306,900	\$440,971
<p>a) <b>Instructional Technology Leaders (ITLs)</b></p> <ul style="list-style-type: none"> <li>• Continue intensive support to at least 40 districts in the instructional use of electronic mail. These districts serve as demonstration and training sites for their regions.</li> <li>• Prepare ITLs to manage information resources in electronic formats</li> <li>• ITLs will participate in at least one regional and two statewide training events and will plan, deliver and evaluate training locally</li> <li>• ITLs admitted to the International Society for Technology Education Leadership Academy will be eligible to receive a \$5,000 scholarship to defray the \$10,000 expense.</li> </ul>	\$0	\$35,000	\$35,000

	Labor	Operating	Total
b) <b>School Technology Coordinators (STCs)</b>	\$0	\$80,000	\$80,000
• STCs will participate in regional programming coordinated by the Instructional Technology Leaders; this year's thematic focus will be Consolidated Planning			
c) <b>District Technology Coordinators (DTCs)</b>	\$0	\$25,000	\$25,000
• State funding will support Kentucky Association of Technology Coordinators professional development activities			
d) <b>Library Media Specialists (LMSs)</b>	\$0	\$15,000	\$15,000
• At least two LMS-specific professional development activities will be conducted in each region			
• LMSs will assist in the evaluation of electronic instructional materials			
e) <b>Education Administrators</b>	\$0	\$5,000	\$5,000
• At least one major statewide professional development activity in the use of instructional technology for administrators will be conducted			
f) <b>District Initiated Programming</b>	\$0	\$136,900	\$136,900
• Each district will receive \$100 per School Technology Coordinator to support locally initiated professional development			
g) <b>Technology Support for Disabled Individuals</b>	\$0	\$10,000	\$10,000
• Educators will be provided with training and technical assistance necessary to support increased access to KETS by individuals with disabilities			
	<b>Labor</b>	<b>Operating</b>	<b>Total</b>
3) <b>Research</b>	\$0	\$30,000	\$30,000
<p>The Department will support research studies investigating the impact of technology on student learning, on cooperative learning, on higher-order thinking skills, and related topics. The KETS research agenda is being coordinated with the Department's Research Specialist; this project should fund up to three studies. In addition, KIRIS data is being analyzed for use in the Needs Assessment Phase of Consolidated Planning, within the context of which comparisons may be sought among assessment data, status of technology implementation, teacher preparation, and models of technology integration.</p>			

4)	<b>Student Technology Leadership Programs (STLPs)</b> STLPs are active in over 400 schools. This project will support existing programs and establish new ones as follows: support the STLP Council; the STLP Sponsors Institute; Student Technology Showcases as conferences; and web development work done by STLPs under contract with the Department for Academic Villages.	Labor \$54,385	Operating \$40,000	Total \$94,385
5)	<b>Web Development and Academic Villages</b> Ten Academic Villages are established: Science and Math; Special Populations; Principals; Elementary; Student Services; Geography; Language Arts; Library Media Specialists; School-Based Decision Making; and School-to-Work. Four additional Villages will be added: Preservice Teachers; Middle Schools; Student Technology Leadership Program; and Milken Educators. This project also supports the selection of electronic instructional materials and web resources development.	Labor \$106,785	Operating \$40,000	Total \$ 146,785
6)	<b>Provide Instructional Support In Each Region</b> A KETS Coordinator is assigned to each Regional Service Center. This project supports twenty-nine days of each year; the remainder is supported through the general fund.	Labor \$38,000	Operating \$8,000	Total \$46,000
	<b>Project 02 Totals</b>	<b>Labor \$383,241</b>	<b>Operating \$424,900</b>	<b>Total \$808,141</b>

**Project 03: Network Infrastructure, Management, and Operations**

This implementation plan continues the state's commitment to fund the cost of operating and supporting the state to district network. The project includes line charges, network management, Help Desk services, diagnostics, network engineering, and consulting support for integrated telecommunications. This project also supports the Education Technology Assistance Center as the learning, demonstration, and testing center for KETS.

	<b>Labor</b>	<b>Operating</b>	<b>Total</b>
<b>1) Maintain State to District Network</b>	<b>\$0</b>	<b>\$1,700,000</b>	<b>\$1,700,000</b>
<p>The Education Technology Trust Fund pays 100% of the line charges to connect and support at least one point of presence in every district to the statewide network. The budget for this line item may be significantly impacted by FCC Rulings on implementation of the Telecommunications Act and the Kentucky Public Service Commission's response to those rulings. The cost of these lines may be higher or lower than that projected.</p>			
<b>2) Network Support Services</b>	<b>Labor</b>	<b>Operating</b>	<b>Total</b>
<b>a) Education Technology Assistance Center</b>	<b>\$80,580</b>	<b>\$230,000</b>	<b>\$310,580</b>
<ul style="list-style-type: none"><li>Center will continue functioning as the primary learning, demonstration center, research facility, and testing lab for KETS.</li><li>During the upcoming year, new contracts will be awarded for most major components including workstations and file servers.</li></ul>			
<b>b) Help Desk</b>	<b>\$0</b>	<b>\$650,000</b>	<b>\$650,000</b>
<ul style="list-style-type: none"><li>The 1-800 KETS Help Desk is available to every KETS site under a contractual agreement with a third party.</li><li>Budgeted funds will maintain current levels of service at about 2,500 calls per month.</li></ul>			
<b>c) Network Engineering Support in Each Region</b>	<b>\$788,840</b>	<b>\$40,000</b>	<b>\$828,840</b>
<ul style="list-style-type: none"><li>A KETS Engineer is assigned to each Regional Service Center to provide direct support to schools and districts in local and wide area network implementation.</li></ul>			
<b>d) Issue Guidelines for Managing Instructional Resources in a Networked Environment</b>	<b>\$337,840</b>	<b>\$7,000</b>	<b>\$344,840</b>
<ul style="list-style-type: none"><li>Three Engineers are assigned to research and evaluation of instructional technologies in a network: capacity planning; access and retrieval tools; web development; electronic mail; and new technologies.</li><li>Architectural standards, technical specifications for contracts, implementation guidelines, and product evaluations are produced.</li></ul>			

3) <b>Network Management</b>	Five Engineers support management of the statewide network including design, reconfigurations, diagnostics, and capacity planning. The budget also funds technical training, licenses, and network management software.	Labor \$396,437	Operating \$145,000	Total \$541,437
<b>Project 03 Totals</b>		<b>Labor \$1,603,697</b>	<b>Operating \$2,772,000</b>	<b>Total \$4,375,697</b>

**Project 04: Continue Implementation of the District Administrative Systems**

Implementation of the following components of the District Administrative System will continue throughout the year:

- MUNIS - - the financial management and administrative software used in each district office
- NCD Databank - - software which accumulates attendance information in local district offices from the schools
- Statewide Reporting and Information Management System - - provides essential data about schools, districts, and personnel resources.

	Labor	Operating	Total
1) <b>Project Management and Staffing</b>	<b>\$1,265,000</b>	<b>\$85,900</b>	<b>\$1,350,900</b>
a) Project Management Team	\$89,900	\$7,200	\$97,100
b) Finance Support and Accounting Team	\$175,000	\$35,000	\$210,000
c) Technical Support Team	\$265,700	\$21,600	\$287,300
d) Training and Post-Implementation Support Team	\$275,400	\$12,000	\$287,400
e) Documentation Team	\$114,400	\$1,100	\$115,500
f) Application Support Team	\$344,600	9,000	\$353,600
2) <b>User Support Services</b>	<b>\$0</b>	<b>\$442,200</b>	<b>\$442,200</b>
a) Support Users Group	\$0	\$3,000	\$3,000
b) Maintain Frankfort Training Facility	\$0	\$85,200	\$85,200
c) Financial Systems Help Desk	\$0	\$354,000	\$354,000
3) <b>Maintain Software Contracts and Licenses</b>	<b>\$0</b>	<b>\$667,300</b>	<b>\$667,300</b>
a) On MUNIS and Informix	\$0	\$472,200	\$472,200
b) Contractual Obligations and License for Financial Systems	\$0	\$195,100	\$195,100
4) <b>Continue Implementation of District Accumulator</b>	<b>\$151,700</b>	<b>\$12,000</b>	<b>\$163,700</b>
As school-based attendance software vendors provide extract programs, installation team will coordinate the installation of NCS databank software.			
5) <b>Continue Statewide Reporting Implementation</b>	<b>\$53,100</b>	<b>\$0</b>	<b>\$53,100</b>
Continue to expand and maintain the enterprise data model consistent with the Kentucky Board of Education strategic plan.			
<b>Project 04 Totals</b>	<b>Labor \$1,416,700</b>	<b>Operating \$1,207,400</b>	<b>Total \$2,624,100</b>

KENTUCKY DEPARTMENT OF EDUCATION

STAFF NOTE

Information Item:

Kentucky Education Technology System (KETS) Status Report

Applicable Statute or Regulation:

KRS 157.665

Background and Major Policy Implications:

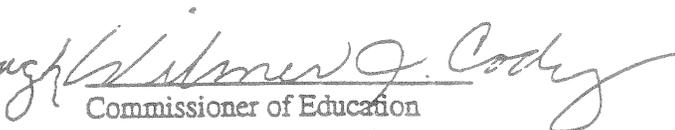

Kentucky Revised Statutes 157.665 (2) and (3) specifically provide to the Kentucky Board of Education the authority to define how Education Technology Trust Funds will be used as well as approval authority for all expenditures related to the Kentucky Education Technology System. The annual KETS Implementation Plan is the vehicle through which the expenditure of Trust Funds is authorized. On a bi-monthly basis, or at any time the Kentucky Board of Education requests, the Department prepares status reports to communicate progress toward the Implementation Plan.

The Kentucky Board of Education approved the 1997/98 KETS Implementation Plan at its June 1997 meeting.

Contact Person:

Don Coffman, Associate Commissioner  
Office of Education Technology or dcoffman@plaza.kde.state.ky.us  
(502) 546-6900

  
Randy L. Kimbrough  
Recommending Deputy

  
Wilmer J. Cody  
Commissioner of Education

Date:

October 1997

Kentucky Education Technology System  
 1997/98 Implementation Plan Status  
 For December 1997 Meeting of the Kentucky Board of Education  
 (current as of September 9, 1997)

**Project 01      Offers of Assistance**

• Offers of Assistance:

Districts continue to qualify for Offers of Assistance earlier in each fiscal year (see Staff Note on Offers of Assistance to LEAs for details.) The following represents the current status of the Offers of Assistance program for the 1997/98 year.

	Meets Require:	Offer \$23.00 * ADA	Amount Escrowed	Amount Wired
REGION 1 (25)				
Total	13	\$730,636	\$88,106	\$463,630
REGION 2 (30)				
Total	24	1,621,210	0	1,403,979
REGION 3 (1)				
Total	1	1,847,222	0	1,847,222
REGION 4 (28)				
Total	15	734,498	0	454,743

State Total	104	\$8,922,974	\$180,989	\$5,967,351

- Technology Literacy Challenge Funds

Kentucky received \$3.52 million in June 1997 to be used for education technology in the K - 12 schools from the federal Technology Literacy Challenge Fund (TLCF), a GOALS 2000 program. Based on the latest information from the U. S. Department of Education, Kentucky is the only state making these funds available to every district on an equitable basis. Kentucky districts were also able to access the TLCF more rapidly than districts in the majority of states; the federal requirement for separate and lengthy TLCF applications from districts was waived in Kentucky based on the strength of the *Master Plan* and district Technology Plans. The following explains how TLCF are being used by districts:

Utilization as % of Total TLCF	
Instructional Management	1%
Presentation/ Web Technology	3%
Workstations/ File Servers	14%
Instructional Content	16%
Professional Development	17.5%
Networking	48.5%

As may be seen from the chart above, the majority of TLCF was spent on networking. The following depicts the combined impact of TLCF and Netday initiatives on network implementation in the public schools as regards the pursuit of equity:

**Project 02 Instructional Technology, Professional Development and Planning**

- **Consolidated Planning**

The Kentucky Education Technology Program has been incorporated into the new Consolidated Plan and Funding Application along with eighteen (18) other federal and state categorical programs. Inclusion of technology in this planning process will help districts and schools structure a much closer alignment of technology resources in direct support of instructional objectives.

The fact that KETS technology has been deployed so widely throughout the state makes it possible for districts to use technology extensively to formulate, submit, and manage their Consolidated Plans.

- **Library Management Software**

The Kentucky Education Technology System (KETS) has identified four library management software products through a competitive bid process which may be purchased with KETS funds. Demonstrations of and training for each of the products is available throughout the state.

- **Summer Professional Development Activities**

Summer institutes and professional development camps were held for the various cadre groups: Instructional Technology Leaders; Student Technology Leadership Program; Library Media Specialists; and Geography Specialists. Most programs were hosted by state colleges or universities. Although each program was considered successful by participants attendance at all activities was disappointing. The Department is assessing reasons why districts and teachers may find it unfeasible or undesirable to attend intensive professional development activities in the summer. Strategies will be developed to increase participation in events which are directly responsive to local needs.

- **Kentucky Education Technology Conference '98**

The conference is scheduled for March 5 through March 8, 1998 at the Commonwealth Convention Center in Louisville. This year's conference features sessions on Multiple Intelligences, Models of Professional Development, Student Achievement and Leadership, Administrative Issues, Business/Community Partnerships, Curriculum and Assessment, Distance Learning, Equity Issues, Ethics of Technology Use, Internet Issues, Product Demonstrations, Research Topics, Technical Issues and Technology of the Future. The sessions will be presented by educators, students and educational technology vendors.

- **Instructional Technology**

With the Division of Secondary Vocational Education, the KETS program has developed a Computer Systems Pilot Course initiative in 14 schools distributed throughout the state. The purpose of this project is to introduce courses into the school curriculum which 1) provide students with professional technical skills which are in wide demand and 2) to provide students with the opportunity to achieve well-regarded professional certifications available in the computer and networking industries.

- **State to District Network**

All 176 Kentucky districts remain online to the statewide network via 56KB or T1 lines (with a 95-97% availability rate) that are paid for in full directly from the Education Technology Trust Fund. District line capacity is upgraded on the basis of need as determined by: current utilization of available bandwidth and current utilization of bandwidth maximization strategies.

- **Network Support Services**

The 1-800 KETS Help Desk continues to receive about 1200 calls per month with 95% of all software calls are resolved by first level support. Pilots are beginning which will allow Help Desk analysts to see the user's screen so that problems can be resolved more expediently. All categories of calls for support (Help Desk, Education Technology Assistance Center, vendors, etc.) continue to grow or remain at high levels as new sites join the network. In addition, KETS 1-800 dial-up service for access to email and the Internet for those who do not have a direct connection and for those who are traveling is increasing at about 200% a month.

- **Implementation of New Technologies**

Many districts are being migrated to a new network architecture, called Frame Relay, through the Kentucky Information Highway vendors. This migration is a natural, planned progression to a network design which provides increased response time to the end-user at less cost. The upgrade began in September and will be completed in January.

Migration to the more fully featured mail system, Microsoft Exchange, is underway or has been completed in 157 districts. Districts are experiencing an increase in functionality, response rates and reliability. The migration will be completed by December.

- **Network Implementation**

By the end of September about 1,000 schools will be directly connected to the KETS statewide network (see discussion of Technology Literacy Challenge Fund in Project 01 for more information). The same data indicate that only about 35 - 40% of the classrooms have active network access. This reflects the large unmet need still existing for student and teacher workstations.

- **Universal Service Fund**

The Federal Communications Commission is working on implementation of the 1996 federal Telecommunications Act which guarantees universal service and discounted telecommunications rates for schools and libraries. Kentucky schools should be eligible for a 60 - 70% discount on recurring line charges as well as the purchase costs of hardware and software necessary to make and sustain a wide area network connection. This federal program will have substantial impact on KETS and the long range funding issues associated with *Master Plan* implementation. The Office of Education Technology is active on national committees working with the FCC to influence how the program will be implemented.

- **MUNIS Implementation**

One-hundred sixty (160) districts closed the 1996-97 fiscal year using MUNIS. MUNIS is installed in all 176 public school district offices in Kentucky. During the 1997-98 Fiscal Year, 175 districts will manage their finances using MUNIS. MUNIS implementation plans for Jefferson County will be finalized upon completion of a needs assessment study during the 1997-98 Fiscal Year. Districts continue to receive all or most of the following services: accounting training; basic and intermediate MUNIS user training; AIX training; on-site implementation support; on-site financial support; help desk services; ad hoc report creation services; and, assistance with report generation.

- **District Accumulator**

Sixty-three (63) districts have NCS Databank software installed in the central office. Implementation will continue as districts are identified with school-based attendance packages for which the attendance vendor has written a satisfactory interface.

- **Statewide Reporting and Information Management System**

The focus of SRIM development and expansion for the upcoming fiscal year is the Consolidated Planning process and the data generated thereby which is needed for decision support related to the Strategic Action Plans adopted by the Kentucky Board of Education.

**Office of Education Accountability  
District Technology Coordinator Survey**

**Note: All answers to these questions represent aggregate numbers from the respondent schools.**

1. How many computers are in your district's schools? **10,050**
  
2. Please identify the configuration(s) of classrooms in your school district:
  - Stand-alone computer units with individual software **423**
  - Computers connected to a local area network **604**
  - Computers connected to a districtwide area network **235**
  - Computers connected to the statewide area network **222**
  
3. Are the computers in your schools connected to printers? **Yes 100%**
  
4. How would you rate the ability of the computer software used in your school district to improve classroom instruction?
 

Excellent	Good	Fair	Poor
<b>41.2%</b>	<b>52.9%</b>	<b>5.9%</b>	<b>0%</b>
  
5. In your school district, is there a process which the schools use to select computer software to ensure that the software chosen correlates well with Kentucky's Academic Expectations? **Yes 75%** **No 25%**
  
6. How would you rate the instructional software used in your schools relative to its compatibility with Kentucky's Curriculum Frameworks?
 

Excellent	Good	Fair	Poor
<b>23.5%</b>	<b>58.8%</b>	<b>17.6%</b>	<b>0%</b>
  
7. How would you rate the Professional Development provided to your teachers relative to the computer hardware and software actually used in your schools?
 

	Excellent	Good	Fair	Poor
Hardware	<b>17.6%</b>	<b>76.5%</b>	<b>5.9%</b>	<b>0%</b>
Software	<b>17.6%</b>	<b>70.6%</b>	<b>11.8%</b>	<b>0%</b>
  
8. How would you rate the support that the Kentucky Department of Education has provided to enable you to be successful as a district technology coordinator?
 

Excellent	Good	Fair	Poor
<b>29.4%</b>	<b>58.8%</b>	<b>11.8%</b>	<b>0%</b>
  
9. In your school district, do you work full-time as the district technology coordinator? **Yes 41.2%** **No 58.8%**
  
10. What is your overall assessment of your experience with the KETS program?
 

Excellent	Good	Fair	Poor
<b>29.4%</b>	<b>70.6%</b>	<b>0%</b>	<b>0%</b>

**Office of Education Accountability  
School Technology Coordinator Survey**

1. Computer Distribution (Number available):
  - classroom computers   **2,566**
  - in computer labs       **3,282**
  - "roving" stations       **117**
  - teacher workstations   **988**
  - computers available for home use/check out (by students or teachers)   **226**
  
2. Network:
  - drops per classroom   **1.7**           per lab   **6.5**
  
3. Administrative Use of Network:
  - student data transfer to/from central office   **Yes 38.3%**       **No 41.7 %**
  - e-mail within and outside building           **Yes 71.7%**       **No 28.3%**
  
4. Teacher Use of Network:
  - lesson plans, resources in central location for sharing   **Yes 26.4%**   **No 73.6%**
  - e-mail within building                                   **Yes 59.6%**   **No 40.4%**
  - e-mail with parents                                       **Yes 15.4%**   **No 84.6%**
  - internet e-mail   **Yes 50.0%**   **No 50.0%**
  - class web/homework posting                           **Yes 5.2%**     **No 94.8%**
  - other
  
5. Student Use of Network:
  - e-mail   **Yes 24%**       **No 76%**
  - computer-assisted instruction (CAI [drill and practice])   **Yes 85%**       **No 15%**
  - computer managed instruction (CMI [individualized learning])   **Yes 71.1%**   **No 28.9%**
  - integrated learning systems (ILS [managed learning in core subjects])   **Yes 55.8%**   **No 44.2%**
  - computer-enriched instruction (CEI [CEI simulation])   **Yes 66%**       **No 34%**

**Office of Education Accountability  
Elementary Classroom Teacher Survey**

1. Classroom computers (Number available):  
student stations 802  
teacher workstation 338
2. Check if available in classroom:  
phone (31.2%) VCR (78%) videodisc (15.2%) CD-ROM (48.9%)  
LAN connections (15.2%) internet access (18.8%)
3. Is technology available to students in your classroom as part of their everyday work (e.g., writing/publishing, simulations, drill/practice, e-mail, research CD's, science probes, etc.)? Yes 79% No 21%
4. Do students work in cooperative groups using computers? Yes 63.3% No 36.6%
5. Do students work on cross curricular projects using technology? Yes 60.5% No 39.5%
6. Do you use technology routinely for instruction (e.g., overhead projection, video, videodisc, etc.)? Yes 84.1% No 15.9%
7. Do you collaborate with colleagues in your building via e-mail? Yes 35.2% No 64.8%
8. Do you participate in listservs or other on-line discussions about teaching or technology in the classroom? Yes 7% No 93%
9. Do you use technology to:
  - A. Gather resources on-line Yes 27.5% No 72.5%
  - B. Prepare lessons Yes 49.5% No 50.5%
  - C. Grade keeping/Progress Reports Yes 36.8% No 63.2%
  - D. Portfolio assessment Yes 24.0% No 76.0%
  - E. Classroom attendance Yes 9.8% No 90.2%
10. How often do students have access to a computer lab?  
29.6% daily 51.4% weekly 1% monthly 1.5% seldom 16.5% never

**Office of Education Accountability  
High School Classroom Teacher Survey**

1. Classroom computers (Number available):  
 student stations 327.4  
 teacher workstation 150
  
2. Check if available in classroom:  
 phone (44%) VCR (72.6%) videodisc (28.6%) CD-ROM (36.9%)  
 LAN connections (22.6%) internet access (38.1%)
  
3. Is technology available to students in your classroom as part of their everyday work (e.g., writing/publishing, simulations, drill/practice, databases, spreadsheets, e-mail, research CD's, science probes, etc.)? **Yes 61% No 39%**
  
4. Do students use classroom, lab, or library technology for research (internet, CD-ROM)? **Yes 84% No 16%**
  
5. Do students work cooperatively on projects using technology (e.g., English, science, social studies, math, foreign language, etc.)? **Yes 75.9% No 24.1%**
  
6. Do students work on cross curricular projects using technology? **Yes 59.7% No 40.3%**
  
7. Do you use technology routinely for instruction (overhead projection, video, videodisc, etc.)? **Yes 94% No 6%**
  
8. Do you collaborate with colleagues in your building via e-mail? **Yes 42.5% No 57.5%**
  
9. Do you participate in listservs or other on-line discussions pertaining to the use of technology in the classroom? **Yes 7.7% No 92.3%**
  
10. Do you use technology to:
 

A. Gather resources on-line	<b>Yes 61.5%</b>	<b>No 38.5%</b>
B. Prepare lessons	<b>Yes 77.1%</b>	<b>No 22.9%</b>
C. Grade keeping/Progress Reports	<b>Yes 76.8%</b>	<b>No 23.2%</b>
D. Portfolio assessment	<b>Yes 35.0%</b>	<b>No 65.0%</b>
E. Classroom attendance	<b>Yes 25%</b>	<b>No 75%</b>

D. Portfolio assessment	<b>Yes 29.2%</b>	<b>No 70.8%</b>
E. Classroom attendance	<b>Yes 17.8%</b>	<b>No 82.2%</b>

# *APPENDIX G*

## OFFICE OF EDUCATION ACCOUNTABILITY HOTLINE

The Office of Education Accountability (OEA) has maintained a toll-free hotline service since January 1991, adding a second line in the spring of 1992, to receive concerns and complaints from citizens, parents, and school district employees. When a complaint is received, staff endeavor to obtain specific information related to the complaint. The caller is asked to follow up the complaint in writing to the OEA office. Callers are told that they do not have to sign their name if they wish to remain anonymous. Calls on the hotline, when followed up with the requested documentation, result in a review of the matter.

Concerns reported this year include: school-based decision making, special education, Kentucky Instructional Results Information System testing, nepotism, governance issues, conflict of interest of board members, inadequate educational programs, and various problems involving local district policies. While all calls are logged and follow-up requested, we find that some people "shop" for a response and are unhappy if they do not hear what they want. Other callers do not follow up with requested information.

To date, OEA has received 5142 calls; 438 of them during 1997. While the number of calls has decreased, the complexity of the problems presented has increased significantly. Many calls require a great deal of time on the part of staff. In addition to the hotline, OEA receives a high volume of complaint letters from concerned citizens in the state. All letters are reviewed by staff and if signed, receive a written response. OEA responses vary, depending on the severity of the issue; it may be as simple as responding to a question not requiring outside information; we may ask the district to review the issue and share their findings with OEA; or a full on-site investigation may be needed.

# *APPENDIX H*

## HIGH SCHOOL RESTRUCTURING

In February 1997, the Kentucky Board of Education (KBE) approved a new regulation, 704 KAR 3:305, concerning requirements for graduation beginning with the Class of 2002. This regulation states that "each student in a common school shall complete an individual graduation plan which incorporates emphasis on career development and shall have a total of at least twenty-two (22) credits for high school graduation." The new requirements are:

- 4 - Language Arts
- 3 - Social Studies to incorporate U.S. History, Economics, Government, World Geography, and World History
- 3 Mathematics including Algebra I, and Geometry
- 3 - Science including Life Science, Physical Science, and Earth and Space Science
- ½ - Health
- ½ - Physical Education
- 1 - History and Appreciation of Visual and Performing Arts
- 7 - Electives

704 KAR 3:305 further provides that local boards of education must maintain a policy on high school graduation requirements and how these requirements address the six learning goals of KRS 158.6451(1)(b) and the 57 academic expectations of 703 KAR 4:060. The policy is to be developed by the school council or absent such, the local board.

The Kentucky Department of Education (KDE) is continuing to help schools develop a stronger curriculum. Their current project is Gold Star Schools. The Partnership for Kentucky Schools is a supporting partner in this effort. The purpose of this project is to develop a set of performance standards for the 15 required core courses. The goal is to look at standards of performance that will determine when a student has mastered the content of the course. Assessment will be determined by local school districts. The following is a list of potential Gold Star Schools and/or school districts:

Eminence High School  
East Jessamine County High School  
Grant County High School  
Jefferson County Central Office  
Lyon County Central Office  
Oldham County Central Office

Rockcastle County High School  
Scott County High School  
Simon Kenton High School  
South Floyd High School  
West Jessamine County High School  
Williamsburg High School

KDE is continuing to work on a revised program of studies. Staff plans to have a draft version for KBE to review at its December 1997 meeting. The program of studies will have an accompanying manual with instructional models, ideas on how to set up individual graduation plans, etc. All of this should be available to school districts for use in the 1998-99 school year.

During 1996-97, OEA monitoring division staff visited 17 school districts which had 22 high schools. The demographics of these schools range from small rural to large urban and those in rewards to those in decline. Fifteen of these schools use block scheduling, thirteen are involved in Tech Prep, and fifteen are involved in the School-to-Work program. Strong leadership from the principal and site-based council was characteristic of all successful schools. Several of the "in-decline" schools believes that this "tag" was undeserved but have viewed it as a wake-up call and are rethinking strategies needed for success. The classroom observations provided staff an opportunity to see outstanding instruction across all academic areas.

# *APPENDIX I*

## **KRS 7.410. OFFICE OF EDUCATION ACCOUNTABILITY**

DEPUTY DIRECTOR OF THE LEGISLATIVE RESEARCH COMMISSION TO ADMINISTER DUTIES OF OFFICE RELATIONS WITH OTHER ENTITIES CONFIDENTIALITY OF TESTIMONY, WORK PRODUCTS, AND RECORDS.

- (1) It is the intent of the General Assembly to provide an efficient system of common schools which shall be operated without waste, duplication, mismanagement, and political influence. The system of schools shall have the goal of providing all students with at least the seven (7) capacities referred to in KRS 158.645.
- (2) (a) An Office of Education Accountability is hereby created and shall be under the direction of the Legislative Research Commission.
  - (b) The Office of Education Accountability shall be administered by a deputy director appointed by the Legislative Research Commission upon recommendation of the director of the Legislative Research Commission. The deputy shall have the qualifications set by the Commission. The salary of the deputy director shall be set by the Commission. The Commission shall have exclusive jurisdiction over the employment of personnel necessary to carry out the provisions of this section. The deputy director shall be subject to the direction of and report to the director of the Legislative Research Commission.
  - (c) The Office of Education Accountability shall have the following duties and responsibilities:
    1. Monitor the education system and implementation of the provisions of the Kentucky Education Reform Act of 1990, 1990 Ky. Acts ch. 476, including actions taken by the State Board for Elementary and Secondary Education, the Education Professional Standards Board, the chief state school officer, the Department of Education, local school districts, and vocational and higher education as affected by the Kentucky Education Reform Act of 1990, 1990 Ky. Acts ch. 476.
    2. Establish a Division of School Finance which shall conduct an ongoing review of the finance system. The review shall include an analysis of the level of equity achieved by the funding system and whether adequate funds are available to all school districts; a review of the weights of various education program components, which are to be developed by the Department of Education no later than October 1, 1991. The division shall develop recommendations for the base per pupil funding for the support

- education excellence in Kentucky program and a statewide salary schedule. It shall conduct studies of other finance issues identified as needing further study, including a review of the transportation formula required in KRS 157.360. The division shall submit an annual report of its activities, findings, and recommendations to the Governor, the Legislative Research Commission, and the State Board for Elementary and Secondary Education no later than October 1 each year.
3. Verify the accuracy of reports of school, district, and state performance by conducting, contracting for, or requesting periodic program and fiscal audits as necessary. The Office of Education Accountability may request an audit from the State Committee for School District Audits as established in KRS 156.265.
  4. Investigate allegations of wrongdoing of any person or agency, including, but not limited to, waste, duplication, mismanagement, political influence, and illegal activity at the state, regional, or school district level which have not been resolved or satisfactorily explained by the local superintendent, local board of education, the chief state school officer, or the State Board for Elementary and Secondary Education, and make recommendations for action to the Legislative Research Commission.
  5. Conduct studies and analyze available data on the efficiency of the system of schools and whether progress is being made toward attaining the goal of providing students with the seven (7) capacities as required by KRS 158.645.
  6. Make periodic reports to the Legislative Research Commission as directed by the Commission.
  7. Prepare an annual report on the implementation of the provisions of the Kentucky Education Reform Act of 1990, 1990 Ky. Acts ch. 476, including recommendations for improvement which shall be submitted to the Governor, the Legislative Research Commission, and the State Board for Elementary and Secondary Education.
- (d) The Office of Education Accountability shall have access to all public records and information on oath as provided in KRS 7.110. The office shall also have access to otherwise confidential records, meetings, and hearings regarding local school district personnel matters. However, the office shall not disclose any information contained in or derived from the records, meetings, and hearings that would enable the discovery of the specific identification of any individual who is the focus or subject of the personnel matter.
- (e) In compliance with KRS 48.800, 48.950, and 48.955, the Finance and Administration Cabinet and the Governor's Office for Policy and Management shall provide to the Office of Education Accountability access to all information and records, other than preliminary work papers, relating to allotment of funds, whether by usual allotment or by other means,

to the Department of Education, local school districts, and to other recipients of funds for educational purposes.

- (f) Any state agency receiving a complaint or information which if accurate may identify a violation of the Kentucky Education Reform Act of 1990, 1990 Ky. Acts ch. 476, shall notify the office of the complaint or information.
  - (g) The Office of Education Accountability may contract for services as approved by the Legislative Research Commission pursuant to KRS 7.090(7).
- (3) The provisions of KRS 61.878 or any other statute, including Acts of the 1992 Regular Session of the General Assembly to the contrary notwithstanding, the testimony of investigators, work products, and records of the Office of Education Accountability relating to duties and responsibilities under subsection (2) of this section shall be privileged and confidential during the course of an ongoing investigation or until authorized, released, or otherwise made public by the Office of Education Accountability and shall not be subject to discovery, disclosure, or production upon the order or subpoena of a court or other agency with subpoena power.
