

While the cost to local government will be minimal, KSP estimates the initial cost to the State Treasury regarding the \$5 payment to the agency as a maximum of \$186,275. This is based on 37,255 felony arrests. These arrest include single and multiple felony offense charges per arrest. Depending on the type of any prior felony offense (i.e. sexual assault), a number of these arrestees may have already submitted to a DNA sample prior to this program. This figure does not include the cost of supplies which will be absorbed by the KSP or the training which will also be provided free of cost by the KSP.

It may be assumed that if the bill passes, the cost to the State Treasury and consequently, the amount going to local governments, will decrease over time, as DNA samples will have already been collected on repeat offenders. The Bureau of Justice Statistics (BJS) puts the percentage for repeat felon arrest in the country's 75 largest counties as high as 75%. Additional BJS data states three in four former prisoners in 30 states are arrested within five years of release. Kentucky-specific data regarding repeat offenders is not readily available, but assuming the BJS data of 75% recidivism, over a 10 year cycle, DNA samples may only be needed on approximately 9,300 felony arrestees annually.

Below is a breakdown of felony arrest per county by the arresting agency for 2015. This data is only through December 4, 2015. Whereas, there can be a significant variance year to year especially with the larger agencies, the omission of December is not crucial to providing a rough estimate. When estimating the impact to a specific local agency at \$5 per sample, keep in mind the future impact of repeat offenders and lower the estimate accordingly.

COUNTY	NUMBER OF FELONY ARREST		COUNTY	NUMBER OF FELONY ARREST
